the Boers, of whose designs he was afraid. . . . As a result of Sir Charles Warren's mission to Bechuanaland, and of the reports furnished by the agents he sent into Matabeleland, the attention of adventurers and prospectors was more and more drawn towards the latter country. The Portuguese . . . had been electrified into activity by the events of the past two years. That the attention of the British Government was directed to Matabeleland even in 1887 is evident from a protest in August of that year, on the part of Lord Salisbury, against an official Portuguese map claiming a section of that country as within the Portuguese sphere. Lord Salisbury then clearly stated that no pretensions of Portugal to Matabeleland could be recognised, and that the Zambesi should be regarded as the natural northern limit of British South Africa. The British Prime Minister reminded the Portuguese Government that according to the Berlin Act no claim to territory in Central Africa could be recognised that was not supported by effective occupation. The Portuguese Government maintained (it must be admitted with justice) that this applied only to the coast, but Lord Salisbury stood firmly to his position. . . . Germans, Boers, Portuguese, were all ready to lay their hands on the country claimed by Lobengula. England stepped in and took it out of their hands; and at the worst she can only be accused of obeying the law of the universe, 'Might is Right.' By the end of 1887 the attempts of the Transvaal Boers to obtain a hold over Matabeleland had reached a crisis. It became evident that no time was to be lost if England was to secure the Zambesi as the northern limit of extension of her South African possessions. Lobengula himself was harassed and anxious as to the designs of the Boers on the one hand, and the doings of the Portuguese on the north of his territory on the other. In the Rev. J. Smith Moffat, Assistant Commissioner in Bechuanaland, England had a trusty agent who had formerly been a missionary for many years in Matabeleland, and had great influence with Lobengula. Under the circumstances, it does not seem to have been difficult for Mr. Moffat to persuade the King to put an end to his troubles by placing himself under the protection of Great Britain. On 21st March 1888, Sir Hercules Robinson, Governor of Cape Colony, and Her Majesty's High Commissioner for South Africa, was able to inform the Home Government that on the previous 11th February Lobengula had appended his mark to a brief document which secured to England supremacy in Matabeleland over all her rivals. . . . The publication of the treaty was, as might be expected, followed by reclamations both on the part of the Transvaal and of Portugal. Before the British hold was firmly established over the country attempts were made by large parties of Boers to trek into Matabeleland. . . . Individual Boers as well, it must be said, as individual Englishmen at the kraal of Lobengula, attempted to poison the mind of the latter against the British. But the King remained throughout faithful to his engagements. Indeed, it was not Lobengula himself who gave any cause for anxiety during the initial stage of the English occupation. He is, no doubt, a powerful chief, but even he is obliged to defer to the wishes of his 'indunas' and his army. . . . Lobengula himself kept a firm hand over his warriors, but even he was at times apprehensive that they might burst beyond all control. Happily this trying initial period passed without disaster. . . . No sooner was the treaty signed than Lobengula was besieged for concessions of land, the main object of which was to obtain the gold with which the country was said to abound, especially in the east, in Mashonaland." The principal competitors for what was looked upon as the great prize were two syndicates of capitalists, which finally became amalgamated, in 1889, under the skilful diplomacy of Mr. Cecil J. Rhodes, forming the great British South Africa Company, about which much has been heard in recent years. "The principal field of the operations of the British South Africa Company was defined in the charter to be 'the region of South Africa lying immediately to the north of British Bechuanaland,' and to the north and west of the South African Republic, and to the west of the Portuguese dominions.' The Company was also empowered to acquire any further concessions, if approved of by 'Our Secretary of State.' . . . The Company was empowered to act as the representative of the Imperial Government, without, however, obtaining any assistance from the Government to bear the expense of the administration. . . . The capital of the Company was a million sterling. It is not easy to define the relations of the Chartered Company to the various other companies which had mining interests in the country. In itself it was not a consolidation of the interests of those companies. Its functions were to administer the country and to work the concessions on behalf of the Concessionaires, in return for which it was to retain fifty per cent. of the profits. . . . When the British South African Company was prepared to enter into active occupation of the territories which they were authorised to exploit, they had on the one hand the impis of Lobengula eager to wash their spears in white blood; on the south the Boers of the Transvaal, embittered at being prevented from trekking to the north of the Limpopo, and on the east and on the north-east the Portuguese trying to raise a wall of claims and historical pretensions against the tide of English energy. . . . An agreement was concluded between England and Portugal in August 1890, by which the eastern limits of the South Africa Company's claims were fixed, and the course of the unknown Sabi River, from north to south, was taken as a boundary. But this did not satisfy either Portugal or the Company, and the treaty was never ratified. . . . A new agreement [was] signed on the 11th June 1891, under which Portugal can hardly be said to have fared so well as she would have done under the one repudiated by the Cortes in the previous year. The boundary between the British Company's territories was drawn farther east than in the previous treaty. The line starting from the Zambesi near Zumbo runs in a general south-east direction to a point where the Mazoe River is cut by the 33rd degree of east longitude. The boundary then runs in a generally south direction to the junction of the Lunde and the Sabi, where it strikes south-west to the north-east corner of the South African Republic, on the Limpopo. In tracing the frontier along the slope of the plateau, the Portuguese sphere was not allowed to come farther west than 32° 30′ E. of Greenwich, nor the British sphere east

of 33° E. A slight deflection westwards was made so as to include Massi Kessi in the Portuguese sphere. . . . According to the terms of the arrangement, the navigation of the Zambesi and the Shiré was declared free to all nations." —J. S. Keltie, *The Partition of Africa, ch.* 18.— By the spring of 1893 the British South Africa Company had fairly laid hands upon its great dominion of Zambesia. Matabele was swarming with searchers for gold; a railroad from the port of Beira, through Portuguese territory, was in progress; a town at Fort Salisbury was rising. Lobengula, the Matabele king, repented speedily of his treaty and repudiated the construction put on it by the English. Quarrels arose over the Mashonas, whom the Matabeles held in slavery and whom the new lords of the country protected. Both parties showed impatience for war, and it was not long in breaking out. The first shots were exchanged early in October; before the end of the year the British were complete masters of the country, and Lobengula had fled from his lost kingdom, to die, it is said, during the flight. There were two pitched battles, in which the natives suffered terribly. They obtained revenge in one instance, only, by cutting off a party of thirty men, not one of whom survived.

A. D. 1670-1696.—The founding of Charleston.—The growth of the Colony.—The expedition of Captain Sayle in 1670 (see NORTH CAROLINA: A. D. 1663–1670) resulted in a settlement, made in 1671, which is historically referred to as that of "Old Charleston." This continued to be for some years the capital of the southern colony; "but, as the commerce of the colony increased, the disadvantages of the position were discovered. It could not be approached by large vessels at low water. In 1680, by a formal command of the proprietors, a second removal took place, the government literally following the people, who had in numbers anticipated the legislative action; and the seat of government was transferred to a neck of land called Oyster Point, admirably conceived for the purposes of commerce, at the confluence of two spacious and deep rivers, the Kiawah and Etiwan, which, in compliment to Lord Shaftesbury, had already been called after him, Ashley and Cooper. Here the foundation was laid of the present city of Charleston. In that year 30 houses were built, though this number could have met the wants of but a small portion of the colony. The heads of families at the Port Royal settlement alone, whose names are preserved to us, are 48 in number; those brought from Clarendon by Yeamans could not have been less numerous; and the additions which they must have had from the mother-country, during the seven or eight years of their stay at the Ashley river settlement, were likely to have been very considerable. Roundheads and cavaliers alike sought refuge in Carolina, which, for a long time, remained a pet province of the proprietors. Liberty of conscience, which the charter professed to guaranty, encouraged emigration. The hopes of avarice, the rigor of creditors, the fear of punishment and persecution, were equal incentives to the settlement of this favored but foreign region. . . . In 1674, when Nova Belgia, now New York, was conquered by the English, a number of the Dutch from that place sought refuge in Carolina. . . . Two vessels filled with foreign, perhaps French, Protestants, were transported to Carolina, at the expense of Charles II., in 1679; and the revocation of the edict of Nantz, a few years afterwards, . . . contributed still more largely to the infant settlement, and provided Carolina with some of the best portions of her growing population. . . . In 1696, a colony of Congregationalists, from Dorchester in Massachusetts, ascended the Ashley river nearly to its head, and there founded a town, to which they gave the name of that which they had left. Dorchester became a town of some importance. . . . It is now deserted; the habitations and inhabitants have alike vanished; but the reverend spire, rising through the forest trees which surround it, still attests (1840) the place of their worship, and where so many of them yet repose. Various other countries and causes contributed to the growth and population of the new settlement."—W. G. Simms, *Hist. of South Carolina, bk.* 2, *ch.* 1.

A. D. 1680.—Spanish attack from Florida. —Indian and Negro Slavery.—"About 1680 a few leading Scotch Presbyterians planned the establishment of a refuge for their persecuted brethren within the bounds of Carolina. The plan shrunk to smaller dimensions than those originally contemplated. Finally Lord Cardross, with a colony of ten Scotch families, settled on the vacant territory of Port Royal. The fate of the settlement foreshadowed the miseries of Darien. It suffered alike from the climate and from the jealousy of the English settlers. . . . For nearly ten years the dread of a Spanish attack had hung over South Carolina. . . . In 1680 the threatened storm broke upon the colony. Three galleys landed an invading force at Edisto, where the Governor and secretary had private houses, plundered them of money, plate, and slaves, and killed the Governor's brother-in-law. They then fell upon the Scotch settlement, which had now shrunk to 25 men, and swept it clean out of existence. The colonists did not sit down tamely under their injuries. They raised a force of 400 men and were on the point of making a retaliatory attack when they were checked by an order

from the Proprietors. . . . The Proprietors may have felt . . . that, although the immediate attack was unprovoked, the colonists were not wholly blameless in the matter. The Spaniards had suffered from the ravages of pirates who were believed to be befriended by the inhabitants of Charlestown. In another way too the settlers had placed a weapon in the hands of their enemies. The Spaniards were but little to be dreaded, unless strengthened by an Indian alliance. . . . But from the first settlement of Carolina the colony was tainted with a vice which imperilled its relations with the Indians. Barbadoes . . . had a large share in the original settlement of Carolina. In that colony negro slavery was already firmly established as the one system of industry. At the time when Yeamans and his followers set sail for the shores of Carolina, Barbadoes had probably two negroes for every one white inhabitant. The soil and climate of the new territory did everything to confirm the practice of slavery, and South Carolina was from the outset what she ever after remained, the peculiar home of that evil usage. To the West India planter every man of dark colour seemed a natural and proper object of traffic. The settler in Carolina soon learnt the same view. In Virginia and Maryland there are but few traces of any attempt to enslave the Indians. In Carolina . . . the Indian was kidnapped and sold, sometimes to work on what had once been his own soil, sometimes to end his days as an exile and bondsman in the West Indies. As late as 1708 the native population furnished a quarter of the whole body of slaves. It would be unfair to attribute all the hostilities between the Indians and the colonists to this one source, but it is clear that it was an important factor. From their very earliest days the settlers were involved in troubles with their savage neighbours."—J. A. Doyle, *The English in America: Virginia, Maryland, and the Carolinas, ch.* 12.—"Of the original thirteen states, South Carolina alone was from its origin essentially a planting state with slave labor. . . . The proprietaries tempted emigrants by the offer of land at an easy quit-rent, and 150 acres were granted for every able man-servant. 'In that they meant negroes as well as Christians.' . . . It became the great object of the emigrant 'to buy negro slaves, without which,' adds Wilson, 'a planter can never do any great matter'; and the negro race was multiplied so rapidly by importations that, in a few years, we are told, the blacks in the low country were to the whites in the proportion of 22 to 12."—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *pt.* 2, *ch.* 8 (*v.* 1).

A. D. 1701-1706.—Prosperity of the colony.—Attack on St. Augustine.—French attack on Charleston.—"At the opening of the new century, we must cease to look upon South Carolina as the home of indigent emigrants, struggling for subsistence. While numerous slaves cultivated the extensive plantations, their owners, educated gentlemen, and here and there of noble families in England, had abundant leisure for social intercourse, living as they did in proximity to each other, and in easy access to Charles Town, where the Governor resided, the courts and legislature convened, and the public offices were kept. . . . Hospitality, refinement, and literary culture distinguished the higher class of gentlemen." But party strife at this period raged bitterly, growing mainly out of an attempt to establish the Church of England in the colony. Governor Moore, who had gained power on this issue, sought to strengthen his position by an attack on St. Augustine. "The assembly joined in the scheme. They requested him to go as commander, instead of Colonel Daniel, whom he nominated. They voted £2,000; and thought ten vessels and 350 men, with Indian allies, would be a sufficient force. . . . Moore with about 400 men sets sail, and Daniel with 100 Carolina troops and about 500 Yemassee Indians march by land. But the inhabitants of St. Augustine had heard of their coming, and had sent to Havana for reinforcements. Retreating to their castle, they abandoned their town to Colonel Daniel, who pillaged it before Moore's fleet arrived. Governor Moore and Colonel Daniel united their forces and laid siege to the castle; but they lacked the necessary artillery for its reduction, and were compelled to send to Jamaica for it." Before the artillery arrived, "two Spanish ships appeared off St. Augustine. Moore instantly burned the town and all his own ships and hastened back by land. . . . The expense entailed on the colony was £6,000. When this attack on St. Augustine was planned, it must have been anticipated in the colony that war would be declared against Spain and France." Four years later, the War of the Spanish Succession being then in progress, a French fleet appeared (August, 1706) in the harbor of Charleston and demanded the surrender of the town. Although yellow fever was raging at the time, the governor, Sir Nathaniel Johnson, organized so effective a resistance that the invaders were driven off with considerable loss.—W. J. Rivers, *The Carolinas* (*Narrative and Critical Hist. of Am.*, *v.* 5, *ch.* 5).

A. D. 1740.—War with the Spaniards of Florida. See Georgia: A. D. 1738–1743.

A. D. 1759-1761.—The Cherokee War.—"The Cherokees, who had accompanied Forbes in his expedition against Fort Du Quesne [see Canada: A. D. 1758], returning home along the mountains, had involved themselves in quarrels with the back settlers of Virginia and the Carolinas, in which several, both Indians and white men, had been killed. Some chiefs, who had proceeded to Charleston to arrange this dispute, were received by Governor Littleton in very haughty style, and he presently marched into the Cherokee country at the head of 1,500 men, contributed by Virginia and the Carolinas, demanding the surrender of the murderers of the English. He was soon glad, however, of any apology for retiring. His troops proved very insubordinate; the small-pox broke out among them; and, having accepted 22 Indian hostages as security for peace and the future delivery of the murderers, he broke up his camp, and fell back in haste and confusion. . . . No sooner was Littleton's army gone, than the Cherokees attempted to entrap into their power the commander of [Fort Prince George, at the head of the Savannah], and, apprehensive of some plan for the rescue of the hostages, he gave orders to put them in irons. They resisted; and a soldier having been wounded in the struggle, his infuriated companions fell upon the prisoners and put

them all to death. Indignant at this outrage, the Cherokees beleaguered the fort, and sent out war parties in every direction to attack the frontiers. The Assembly of South Carolina, in great alarm, voted 1,000 men, and offered a premium of £25 for every Indian scalp. North Carolina offered a similar premium, and authorized, in addition, the holding of Indian captives as slaves. An express, asking assistance, was sent to General Amherst, who detached 1,200 men, under Colonel Montgomery, chiefly Scotch Highlanders, lately stationed on the western frontier, with orders to make a dash at the Cherokees, but to return in season for the next campaign against Canada. . . . Joining his forces with the provincial levies, Montgomery entered the Cherokee country, raised the blockade of Fort Prince George, and ravaged the neighboring district. Marching then upon Etchoe, the chief village of the Middle Cherokees, within five miles of that place he encountered [June, 1760] a large body of Indians, strongly posted in a difficult defile, from which they were only driven after a very severe struggle; or, according to other accounts, Montgomery was himself repulsed. At all events, he retired to Charleston, and, in obedience to his orders, prepared to embark for service at the north. When this determination became known, the province was thrown into the utmost consternation. The Assembly declared themselves unable to raise men to protect the frontiers; and a detachment of 400 regulars was presently conceded" to the solicitations of lieutenant governor Bull, to whom the administration of South Carolina had lately been resigned. Before the year closed, the conquest of the French dominions in America east of the Mississippi had been practically finished and the French and Indian War at the north was closed. But, "while the northern colonies exulted in safety, the Cherokee war still kept the frontiers of Carolina in alarm. Left to themselves by the withdrawal of Montgomery, the Upper Cherokees had beleaguered Fort Loudon. After living for some time on horse-flesh, the garrison, under a promise of safe-conduct to the settlements, had been induced to surrender. But this promise was broken; attacked on the way, a part were killed, and the rest detained as prisoners; after which, the Indians directed all their fury against the frontiers. On a new application presently made to Amherst for assistance, the Highland regiment, now commanded by Grant, was ordered back to Carolina. New levies were also made in the province, and Grant presently marched into the Cherokee country [June, 1761] with 2,600 men. In a second battle, near the same spot with the fight of the previous year, the Indians were driven back with loss. . . . The Indians took refuge in the defiles of the mountains, and, subdued and humbled, sued for peace. As the condition on which alone it would be granted, they were required to deliver up four warriors to be shot at the head of the army, or to furnish four green Indian scalps within twenty days. A personal application to Governor Bull, by an old chief long known for his attachment to the English, procured a relinquishment of this brutal demand, and peace was presently made." —R. Hildreth, *Hist. of the U. S., ch.* 27 (*v.* 2).

A. D. 1775.—Rapid progress of Revolution.—Flight of the Royal Governor.—In January, 1775, a provincial convention for South Carolina was called together at Charleston, under the presidency of Charles Pinckney. It appointed delegates to the second Continental Congress, and took measures to enforce the non-importation agreements in which the colony had joined. At a second session, in June, this convention or Provincial Congress of South Carolina "appointed a Committee of Safety, issued $600,000, of paper money, and voted to raise two regiments, of which Gadsden and Moultrie were chosen colonels. Lieutenant-governor Bull was utterly powerless to prevent or interrupt these proceedings. While the Convention was still in session, Lord William Campbell, who had acquired by marriage large possessions in the province, arrived at Charleston with a commission as governor. Received with courtesy, he presently summoned an Assembly; but that body declined to proceed to business, and soon adjourned on its own authority. The Committee of Safety pursued with energy measures for putting the province in a state of defense. A good deal of resistance was made to the Association [for commercial non-intercourse], especially in the back counties. Persuasion failing, force was used. . . . A vessel was fitted out by the Committee of Safety, which seized an English powder ship off St. Augustine and brought her into Charleston. Moultrie was presently sent to take possession of the fort in Charleston harbor. No resistance was made. The small garrison, in expectation of the visit, had already [September] retired on board the ships of war in the harbor. Lord Campbell, the governor, accused of secret negotiations with the Cherokees and the disaffected in the back counties, was soon obliged to seek the same shelter. A regiment of artillery was voted; and measures were taken for fortifying the harbor, from which the British ships were soon expelled."—R. Hildreth, *Hist. of the U. S., ch.* 30–31 (*v.* 3).

Also in: D. Ramsay, *Hist. of South Carolina, v.* 1, *ch.* 7, *sect.* 1.

A. D. 1776 (February—April).—Allegiance to King George renounced, independence assumed, and a state constitution adopted.—"On the 8th of February 1776, the convention of South Carolina, by Drayton their president, presented their thanks to John Rutledge and Henry Middleton for their services in the American congress, which had made its appeal to the King of kings, established a navy, treasury, and general post-office, exercised control over commerce, and granted to colonies permission to

create civil institutions, independent of the regal authority. The next day arrived Gadsden, the highest officer in the army of the province, and he in like manner received the welcome of public gratitude. . . . When, on the 10th, the report on reforming the provincial government was considered and many hesitated, Gadsden spoke out for the absolute independence of America. The majority had thus far refused to contemplate the end toward which they were irresistibly impelled. . . . But the criminal laws could not be enforced for want of officers; public and private affairs were running into confusion; the imminent danger of invasion was proved by intercepted letters, so that necessity compelled the adoption of some adequate system of rule. While a committee of eleven was preparing the organic law, Gadsden, on the 13th, began to act as senior officer of the army. Companies of militia were called down to Charleston, and the military forces augmented by two regiments of riflemen. In the early part of the year Sullivan's Island was a wilderness, thickly covered with myrtle, live-oak, and palmettos; there, on the 2d of March, William Moultrie was ordered to complete a fort large enough to hold 1,000 men. Within five days after the convention received the act of parliament of the preceding December which authorized the capture of American vessels and property, they gave up the hope of reconciliation; and, on the 26th of March 1776, asserting 'the good of the people to be the origin and end of all government,' and enumerating the unwarrantable acts of the British parliament, the implacability of the king, and the violence of his officers, they established a constitution for South Carolina. . . . On the 27th, John Rutledge was chosen president, Henry Laurens vice-president, and William Henry Drayton chief justice. . . . On the 23d of April the court was opened at Charleston, and the chief justice after an elaborate exposition charged the grand jury in these words: 'The law of the land authorizes me to declare, and it is my duty to declare the law, that George III., king of Great Britain, has abdicated the government, that he has no authority over us, and we owe no obedience to him.'"—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *epoch* 3, *ch.* 25 (*v.* 4).

A. D. 1865-1876.—Reconstruction.—"After the close of the war, two distinct and opposing plans were applied for the reconstruction, or restoration to the Union, of the State. The first, known as the Presidential plan [see United

States of Am.: A. D. 1865 (May—July)], was quickly superseded by the second, known as the Congressional plan; but it had worked vast mischief by fostering delusive hopes, the reaction of which was manifest in long enduring bitterness. Under the latter plan, embodied in the Act of Congress of March 2, 1867 [see United States of Am.: A. D. 1867 (March)], a convention was assembled in Charleston, January 14, 1868, 'to frame a Constitution and Civil Government.' The previous registration of voters made in October, 1867, showed a total of 125,328, of whom 46,346 were whites, and 78,982 blacks. . . . On the question of holding a constitutional convention the vote cast in November, 1867, was 71,087; 130 whites and 68,876 blacks voting for it, and 2,801 whites against it. Of the delegates chosen to the convention 34 were whites and 63 blacks. The new Constitution was adopted at an election held on the 14th, 15th, and 16th of April, 1868, all State officers to initiate its operation being elected at the same time. At this election the registration was 133,597; the vote for the Constitution 70,758; against it, 27,288; total vote, 98,046; not voting, 35,551. Against the approval by Congress of this Constitution the Democratic State Central Committee forwarded a protest," which declared: "The Constitution was the work of Northern adventurers, Southern renegades, and ignorant negroes. Not one per cent. of the white population of the State approves it, and not two per cent. of the negroes who voted for its adoption understood what this act of voting implied." "The new State officers took office July 9, 1868. In the first Legislature, which assembled on the same day, the Senate consisted of 33 members, of whom 9 were negroes and but 7 were Democrats. The House of Representatives consisted of 124 members, of whom 48 were white men, 14 only of these being Democrats. The whole Legislature thus consisted of 72 white and 85 colored members. At this date the entire funded debt of South Carolina amounted to $5,407,306.27. At the close of the four years (two terms) of Governor R. K. Scott's administration, December, 1872, the funded debt of the State amounted to $18,515,033.91, including past-due and unpaid interest for three years."—W. Allen, *Governor Chamberlain's Administration in South Carolina, ch.* 1.—"Mr. James S. Pike, late Minister of the United States at the Hague, a Republican and an original abolitionist, who visited the state in 1873, after five years' supremacy by Scott and his successor Moses, and their allies, has published a pungent and instructive account of public affairs during that trying time, under the title of 'The Prostrate State.' The most significant of the striking features of this book is that he undertakes to write a correct history of the state by dividing the principal frauds, already committed or then in process of completion, into eight distinct classes, which he enumerates as follows:—1. Those which relate to the increase of the state debt. 2. The frauds practiced in the purchase of lands for the freedmen. 3. The railroad frauds. 4. The election frauds. 5. The frauds practiced in the redemption of the notes of the Bank of South Carolina. 6. The census fraud. 7. The fraud in furnishing the legislative chamber. 8. General and legislative corruption. . . . Mr. Pike in his 'Prostrate State,' speaking of the state finances in 1873, says: 'But, as the treasury of South Carolina has been so thoroughly gutted by the thieves who have hitherto had possession of the state government, there is nothing left to steal. The note of any negro in the state is worth as much on the market as a South Carolina bond.'" This reign of corruption was checked in 1874 by the election to the governorship of Daniel H. Chamberlain, the regular Republican nominee, who had been Attorney-General during Scott's administration. "Governor Chamberlain, quite in contrast with his predecessors, talked reform after his election as well as before it," and was "able to accomplish some marked and wholesome reforms in public expenditures." In 1876 the Democrats succeeded in overpowering the negro vote and acquired control of the state, electing General Wade Hampton governor.—J. J. Hemphill, *Reconstruction in South Carolina* (*Why the Solid South? ch.* 4).—Generally, for an account of the measures connected with "Reconstruction," see United States of Am.: A. D. 1865 (May—July), to 1868–1870.

SOUTH RIVER, The.—The Delaware and the Hudson were called respectively the South River and the North River by the Dutch, during their occupation of the territory of New Netherland.

SOUTH SEA: The name and its application. See Pacific Ocean.

SOUTH SEA BUBBLE, The.—"The South Sea Company was first formed by Harley [Earl of Oxford, Lord Treasurer of England] in 1711, his object being to improve public credit, and to provide for the floating debts, which at that period amounted to nearly £10,000,000. The Lord Treasurer, therefore, established a fund for that sum. He secured the interest by making permanent the duties on wine, vinegar, tobacco, and several others; he allured the creditors by promising them the monopoly of trade to the Spanish coasts in America; and the project was sanctioned both by Royal Charter and by Act of Parliament. Nor were the merchants slow in swallowing this gilded bait; and the fancied Eldorado which shone before them dazzled even their discerning eyes. . . . This spirit spread throughout the whole nation, and many, who scarcely knew whereabouts America lies, felt nevertheless quite certain of its being strewed with gold and gems. . . . The negotiations of Utrecht, however, in this as in other matters, fell far short of the Ministerial promises and of the public expectation. Instead of a free trade, or any approach to a free trade, with the American colonies, the Court of Madrid granted only, besides the shameful Asiento for negro slaves, the privilege of settling some factories, and sending one annual ship. . . . This shadow of a trade was bestowed by the British Government on the South Sea Company, but it was very soon disturbed. Their first annual ship, the Royal Prince, did not sail till 1717; and next year broke out the war with Spain. . . . Still, however, the South Sea Company continued, from its other resources, a flourishing and wealthy corporation; its funds were high, its influence considerable,

and it was considered on every occasion the rival and competitor of the Bank of England." At the close of 1719 the South Sea Company submitted to the government proposals for buying up the public debt. "The great object was to buy up and diminish the burthen of the irredeemable annuities granted in the two last reigns, for the term mostly of 99 years, and amounting at this time to nearly £800,000 a year." The Bank of England became at once a competitor for the same undertaking. "The two bodies now displayed the utmost eagerness to outbid one another, each seeming almost ready to ruin itself, so that it could but disappoint its rival. They both went on enhancing their terms, until at length the South Sea Company rose to the enormous offer of seven millions and a half. . . . The South Sea Bill finally passed the Commons by a division of 172 against 55. In the Lords, on the 4th of April [1720], the minority was only 17. . . . On the passing of the Bill very many of the annuitants hastened to carry their orders to the South Sea House, before they even received any offer, or knew what terms would be allowed them!—ready to yield a fixed and certain income for even the smallest share in vast but visionary schemes. The offer which was made to them on the 29th of May (eight years and a quarter's purchase) was much less favourable than they had hoped; yet nevertheless, six days afterwards, it is computed that nearly two-thirds of the whole number of annuitants had already agreed. In fact, it seems clear that, during this time, and throughout the summer, the whole nation, with extremely few exceptions, looked upon the South Sea Scheme as promising and prosperous. Its funds rapidly rose from 130 to above 300. . . . As soon as the South Sea Bill had received the Royal Assent in April, the Directors proposed a subscription of one million, which was so eagerly taken that the sum subscribed exceeded two. A second subscription was quickly opened, and no less quickly filled. . . . In August, the stocks, which had been 130 in the winter, rose to 1,000. Such general infatuation would have been happy for the Directors, had they not themselves partaken of it. They opened a third, and even a fourth subscription, larger than the former; they passed a resolution, that from Christmas next their yearly dividend should not be less than fifty per cent.; they assumed an arrogant and overbearing tone. . . . But the public delusion was not confined to the South Sea Scheme; a thousand other mushroom projects sprung up in that teeming soil. . . . Change Alley became a new edition of the Rue Quincampoix [see FRANCE: A. D. 1717–1720]. The crowds were so great within doors, that tables with clerks were set in the street. . . . Some of the Companies hawked about were for the most extravagant projects; we find amongst the number, 'Wrecks to be fished for on the Irish Coast — Insurance of Horses, and other Cattle (two millions) — Insurance of losses by servants — To make Salt Water Fresh — For Building of Hospitals for Bastard Children — For Building of Ships against Pirates — For making of Oil from Sun-flower Seeds — For improving of Malt Liquors — For recovering of Seamen's Wages — For extracting of Silver from Lead — For the transmuting of Quicksilver into a malleable and fine Metal — For making of Iron with Pit-coal — For importing a Number of large Jack Asses from Spain — For trading in Human Hair — For fatting of Hogs — For a Wheel for a Perpetual Motion.' But the most strange of all, perhaps, was 'For an Undertaking which shall in due time be revealed.' Each subscriber was to pay down two guineas, and hereafter to receive a share of one hundred with a disclosure of the object; and so tempting was the offer that 1,000 of these subscriptions were paid the same morning, with which the projector went off in the afternoon. . . . When the sums intended to be raised had grown altogether, it is said, to the enormous amount of £300,000,000, the first check to the public infatuation was given by the same body whence it had first sprung. The South Sea Directors . . . obtained an order from the Lords Justices, and writs of scire facias, against several of the new bubble Companies. These fell, but in falling drew down the whole fabric with them. As soon as distrust was excited, all men became anxious to convert their bonds into money. . . . Early in September, the South Sea stock began to decline: its fall became more rapid from day to day, and in less than a month it had sunk below 300. . . . The decline progressively continued, and the news of the crash in France [of the contemporary Mississippi Scheme of John Law — see FRANCE: A. D. 1717–1720] completed ours. Thousands of families were reduced to beggary. . . . The resentment and rage were universal." —Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713–1783, *ch.* 11 (*v.* 2).

SOUTHERN CONFEDERACY, The.—The organization of the so called Confederate States of America, formed among the states which attempted in 1861 to secede from the American Union, is commonly referred to as the Southern Confederacy. For an account of the Constitution of the Confederacy, and the establishing of its government, see UNITED STATES OF AM.: A. D. 1861 (FEBRUARY).

SOUTHERN CROSS, Order of the.—A Brazilian order of knighthood instituted in 1826 by the Emperor, Pedro I.

SPA-FIELDS MEETING AND RIOT, The. See ENGLAND: A. D. 1816–1820.

SPAHIS.—In the Turkish feudal system, organized by Mahomet II. (A. D. 1451–1481), "the general name for the holders of military fiefs was Spahi, a Cavalier, a title which exactly answers to those which we find in the feudal countries of Christian Europe. . . . The Spahi was the feudal vassal of his Sultan and of his Sultan alone. . . . Each Spahi . . . was not only bound to render military service himself in person, but, if the value of his fief exceeded a certain specified amount, he was required to furnish and maintain an armed horseman for every multiple of that sum."—Sir E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 6 *and* 10.—"The Spahis cannot properly be considered as a class of nobles. In the villages they had neither estates nor dwellings of their own; they had no right to jurisdiction or to feudal service. . . . No real rights of property were ever bestowed on them; but, for a specific service a certain revenue was granted them."—L. Ranke, *Hist. of Servia, ch.* 3. —See, also, TIMAR.

SPAIN.

Aboriginal Peoples.—"Spain must either have given birth to an aboriginal people, or was peopled by way of the Pyrenees and by emigrants crossing the narrow strait at the columns of Hercules. The Iberian race actually forms the foundation of the populations of Spain. The Basks, or Basques, now confined to a few mountain valleys, formerly occupied the greater portion of the peninsula, as is proved by its geographical nomenclature. Celtic tribes subsequently crossed the Pyrenees, and established themselves in various parts of the country, mixing in many instances with the Iberians, and forming the so-called Celtiberians. This mixed race is met with principally in the two Castiles, whilst Galicia and the larger portion of Portugal appear to be inhabited by pure Celts. The Iberians had their original seat of civilisation in the south; they thence moved northward along the coast of the Mediterranean, penetrating as far as the Alps and the Apennines. These original elements of the population were joined by colonists from the great commercial peoples of the Mediterranean. Cádiz and Málaga were founded by the Phœnicians, Cartagena by the Carthaginians, Sagonte by immigrants from Zacynthe, Rosas is a Rhodian colony, and the ruins of Ampurias recall the Emporium of the Massilians. But it was the Romans who modified the character of the Iberian and Celtic inhabitants of the peninsula."—É. Reclus, *The Earth and its Inhabitants: Europe, v.* 1, *p.* 372.

B. C. 237-202.—The rule of Hamilcar, Hasdrubal and Hannibal in the south.—Beginning of Roman conquest. See Punic Wars: The Second.

B. C. 218-25.—Roman conquest.—"The nations of Spain were subjugated one after another by the Romans. The contest began with the second Punic war [B. C. 218], and it ended with the defeat of the Cantabri and Astures by Augustus, B. C. 25. From B. C. 205 the Romans had a dominion in Spain. It was divided into two provinces, Hispania Citerior, or Tarraconensis, and Hispania Ulterior, or Baetica. At first extraordinary proconsuls were sent to Spain, but afterwards two praetors were sent, generally with proconsular authority and twelve fasces. During the Macedonian war the two parts of Spain were placed under one governor, but in B. C. 167 the old division was restored, and so it remained to the time of Augustus. The boundary between the two provinces was originally the Iberus (Ebro). . . . The country south of the Ebro was the Carthaginian territory, which came into the possession of the Romans at the end of this [the second Punic] war. The centre, the west, and north-west parts of the Spanish peninsula were still independent. At a later time the boundary of Hispania Citerior extended further south, and it was fixed at last between Urci and Murgis, now Guardias Viejas, in 36° 41′ N. lat."—G. Long, *Decline of the Roman Republic, v.* 1, *ch.* 1.—See, also, Celtiberians; Lusitania; and Numantian War.

B. C. 83-72.—Sertorius.—Quintus Sertorius, who was the ablest and the best of the leaders of the Popular Party, or Italian Party, or Marian Party, as it is variously designated, which contended against Sulla and the senate, in the first Roman civil war, left Italy and withdrew to Spain, or was sent thither (it is uncertain which) in 83 or 82 B. C. before the triumph of Sulla had been decided. His first attempts to make a stand in Spain against the authority of Sulla failed completely, and he had thoughts it is said of seeking a peaceful retreat in the Madeira Islands, vaguely known at that period as the Fortunate Isles, or Isles of the Blest. But after some adventures in Mauritania, Sertorius accepted an invitation from the Lusitanians to become their leader in a revolt against the Romans which they meditated. Putting himself at the head of the Lusitanians, and drawing with them other Iberian tribes, Sertorius organized a power in Spain which held the Romans at bay for nearly ten years and which came near to breaking the peninsula from their dominion. He was joined, too, by a large number of the fugitives from Rome of the proscribed party, who formed a senate in Spain and instituted a government there which aspired to displace, in time, the senate and the republic on the Tiber, which Sulla had reduced to a shadow and a mockery. First Metellus and then Pompey, who were sent against Sertorius (see Rome: B. C. 78-68), suffered repeated defeats at his hands. In the end, Sertorius was only overcome by treachery among his own officers, who conspired against him and assassinated him, B. C. 72.—G. Long, *Decline of the Roman Republic, v.* 2, *ch.* 31-33.

A. D. 409-414.—Invasion of the Vandals, Sueves, and Alans.—From the end of the year 406 to the autumn of 409, the barbaric torrent of Alans, Sueves and Vandals which had swept away the barriers of the Roman empire beyond the Alps, spent its rage on the unhappy provinces of Gaul. On the 13th of October, 409, the Pyrenees were passed and the same flood of tempestuous invasion poured into Spain. "The misfortunes of Spain may be described in the language of its most eloquent historian [Mariana], who has concisely expressed the passionate, and perhaps exaggerated, declamations of contemporary writers. 'The irruption of these nations was followed by the most dreadful calamities; as the barbarians exercised their indiscriminate cruelty on the fortunes of the Romans and the Spaniards, and ravaged with equal fury the cities and the open country. The progress of famine reduced the miserable inhabitants to feed on the flesh of their fellow-creatures; and even the wild beasts, who multiplied without control in the desert, were exasperated by the taste of blood and the impatience of hunger boldly to attack and devour their human prey. Pestilence soon appeared, the inseparable companion of famine; a large proportion of the people was swept away; and the groans of the dying excited only the envy of their surviving friends. At length the barbarians, satiated with carnage

and rapine, and afflicted by the contagious evils which they themselves had introduced, fixed their permanent seats in the depopulated country. The ancient Galicia, whose limits included the kingdom of Old Castile, was divided between the Suevi and the Vandals; the Alani were scattered over the provinces of Carthagena and Lusitania, from the Mediterranean to the Atlantic Ocean; and the fruitful territory of Bætica was allotted to the Silingi, another branch of the Vandalic nation. . . . The lands were again cultivated; and the towns and villages were again occupied by a captive people. The greatest part of the Spaniards was even disposed to prefer this new condition of poverty and barbarism to the severe oppressions of the Roman government; yet there were many who still asserted their native freedom, and who refused, more especially in the mountains of Galicia, to submit to the barbarian yoke.'"—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 31.

A. D. 711-713.—Conquest by the Arab-Moors.—The last century of the Gothic kingdom in Spain was, on the whole, a period of decline. It gained some extension of boundaries, it is true, by the expulsion of Byzantine authority from one small southern corner of the Spanish peninsula, in which it had lingered long; but repeated usurpations had shaken the throne; the ascendancy of church and clergy had weakened the Gothic nobility without strengthening the people; frequent recurrences of political disorder had interfered with a general prosperity and demoralized society in many ways. The condition of Spain, in fact, was such as might plainly invite the flushed armies of Islam, which now stood on the African side of the narrow strait of Gibraltar. That another invitation was needed to bring them in is not probable. The story of the great treason of Count Illan, or Ilyan, or Julian, and of the betrayed daughter, Florinda, to whose wrongs he made a sacrifice of his country, has been woven into the history of the Moorish conquest of Spain by too many looms of romance and poetry to be easily torn away,—and it may have some bottom of fact in its composition; but sober reason requires us to believe that no possible treason in the case could be more than a chance incident of the inevitable catastrophe. The final conquest of North Africa had been completed by the Arab general Musa Ibn Nosseyr,—except that Ceuta, the one stronghold which the Goths held on the African side of the straits, withstood them. They had not only conquered the Berbers or Moors, but had practically absorbed and affiliated them. Spain, as they learned, was distracted by a fresh revolution, which had brought to the throne Roderick—the last Gothic king. The numerous Jews in the country were embittered by persecution and looked to the more tolerant Moslems for their deliverance. Probably their invitation proved more potent than any which Count Ilyan could address to Musa, or to his master at Damascus. But Ilyan commanded at Ceuta, and, after defending the outpost for a time, he gave it up. It seems, too, that when the movement of invasion occurred, in the spring of 711, Count Ilyan was with the invaders. The first expedition to cross the narrow strait from Ceuta to Gibraltar came under the command of the valiant one-eyed chieftain, Tarik Ibn Zeyud Ibn Abdillah. "The landing of Tarik's forces was completed on the 30th of April, 711 (8th Regeb. A. H. 92), and his enthusiastic followers at once named the promontory upon which he landed, Dschebel-Tarik [or Gebel-Tarik], the rock of Tarik. The name has been retained in the modernized form, Gibraltar. It is also spoken of in the Arabian chronicles as Dschebalu-l-Fata, the portal or mountain of victory." Tarik entered Spain with but 7,000 men. He afterwards received reinforcements to the extent of 5,000 from Musa. It was with this small army of 12,000 men that, after a little more than two months, he encountered the far greater host which King Roderick had levied hastily to oppose him. The Gothic king despised the small numbers of his foe and rashly staked everything upon the single field. Somewhere not far from Medina Sidonia,—or nearer to the town of Xeres de la Frontera—on the banks of the Guadalete, the decisive battle began on the 19th day of July, A. D. 711. It lasted obstinately for several days, and success appeared first on the Gothic side; but treason among the Christians and discipline among the Moslems turned the scale. When the battle ended the conquest of Spain was practically achieved. Its Gothic king had disappeared, whether slain or fled was never known, and the organization of resistance disappeared with him. Tarik pursued his success with audacious vigor, even disobeying the commands of his superior, Musa. Dividing his small army into detachments, he pushed them out in all directions to seize the important cities. Xeres, Moron, Carmona, Cordova, Malaga, and Gharnatta—Granada—(the latter so extensively peopled with Jews that it was called "Gharnatta-al-Yahood," or Granada of the Jews) were speedily taken. Toledo, the Gothic capital, surrendered and was occupied on Palm Sunday, 712. The same spring, Musa, burning with envy of his subordinate's unexpected success, crossed to Spain with an army of 18,000 and took up the nearly finished task. He took Seville and laid siege to Merida—the Emerita Augusta of the Romans—a great and splendid city of unusual strength. Merida resisted with more valor than other cities had shown, but surrendered in July. Seville revolted and was punished terribly by the merciless Moslem sword. Before the end of the second year after Tarik's first landing at Gibraltar, the Arab, or Arab-Moorish, invaders had swept the whole southern, central and eastern parts of the peninsula, clear to the Pyrenees, reducing Saragossa after a siege and receiving the surrender of Barcelona, Valencia, and all the important cities. Then, in the summer of 713, Musa and Tarik went away, under orders from the Caliph, to settle their jealous dissensions at Damascus, and to report the facts of the great conquest they made.—H. Coppée, *Hist. of the Conquest of Spain, bk.* 2–3 (*v.* 1).

ALSO IN: J. A. Condé, *Hist. of the Arabs in Spain, ch.* 8-17 (*v.* 1).—For preceding events see GOTHS (VISIGOTHS); and MAHOMETAN CONQUEST AND EMPIRE.

A. D. 713-910.—The rally of the fugitive Christians.—"The first blow [of the Moslem conquest] had stunned Gothic Spain; and, before she could recover her consciousness, the skilful hands of the Moslemah had bound her, hand and foot. From the first stupor they were not allowed to recover. The very clemency of the Moslems robbed the Christians of argument. If their swords were sharp, their conduct after battle was far better than the inhabitants had any right to expect, far better than that of the Roman or Gothic conquerors had been, when they invaded Spain. Their religion, the defence of which might have been the last rallying-point, was respected under easy conditions; their lives rendered secure and comfortable; they were under tribute, but a tribute no more exacting than Roman taxes or Gothic subsidies. . . . It was the Gothic element, and not the Hispano-Romans, that felt the humiliation most. . . . The Spanish Goths, at first impelled by the simple instinct of self-preservation, had fled in all directions before the fiery march of the Moslemah, after the first fatal battle in the plains of Sidonia. They had taken with them in their flight all the movable property they could carry and the treasures of the churches. Some had passed the Pyrenees to join their kinsmen in Septimania; and others had hidden in the mountain valleys of the great chain-barrier; while a considerable number, variously stated, had collected in the intricate territory of the Asturias and in Galicia, where strength of position made amends for the lack of numbers and organization, and where they could find shelter and time for consultation as to the best manner of making head against the enemy. The country is cut up in all directions by inaccessible, scarped rocks, deep ravines, tangled thickets, and narrow gorges and defiles." This band of refugees in the Asturias — the forlorn hope of Christian Spain — are said to have found a gallant leader in one Pelayo, whose origin and history are so covered with myth that some historians even question his reality. But whether by Pelayo or another prince, the Asturian Spaniards were held together in their mountains and began a struggle of resistance which ended only, eight centuries later, in the recovery of the entire peninsula from the Moors. Their place of retreat was an almost inaccessible cavern — the Cave of Covadonga — in attacking which the Moslems suffered a terrible and memorable repulse (A. D. 717). "In Christian Spain the fame of this single battle will endure as long as time shall last; and La Cueva de Covadonga, the cradle of the monarchy, will be one of the proudest spots on the soil of the Peninsula. . . . This little rising in the Asturias was the indication of a new life, new interests, and a healthier combination. . . . Pelayo was the usher and the representative of this new order, and the Christian kingdom of Oviedo was its first theatre. . . . The battle of Covadonga, in which it had its origin, cleared the whole territory of the Asturias of every Moslem soldier. The fame of its leader, and the glad tidings that a safe retreat had been secured, attracted the numerous Christians who were still hiding in the mountain fastnesses, and infused a new spirit of patriotism throughout the land. . . . Pelayo was now king in reality, as well as in name. . . . With commendable prudence, he contented himself with securing and slowly extending his mountain kingdom by descending cautiously into the plains and valleys. . . . Adjacent territory, abandoned by the Moslems, was occupied and annexed; and thus the new nation was made ready to set forth on its reconquering march."— H. Coppée, *Conquest of Spain by the Arab-Moors, bk.* 5, *ch.* 1-2 (*v.* 1).—"The small province thus preserved by Pelayo [whose death is supposed to have occurred A. D. 737] grew into the germs of a kingdom called at different times that of Gallicia, Oviedo, and Leon. A constant border warfare fluctuated both ways, but on the whole to the advantage of the Christians. Meanwhile to the east other small states were growing up which developed into the kingdom of Navarre and the more important realm of Aragon. Castile and Portugal, the most famous among the Spanish kingdoms, are the most recent in date. Portugal as yet was unheard of, and Castile was known only as a line of castles on the march between the Saracens and the kingdom of Leon."— E. A. Freeman, *Hist. and Conquests of the Saracens, lect.* 5. —"The States of Pelagio [Pelayo] continued, during his reign and that of his son Favila, to be circumscribed to the Asturian mountains; but . . . Alfonso I., the son-in-law of Pelagio, ascended the throne after Favila, and he soon penetrated into Galicia up to the Douro, and to Leon and Old Castile. . . . Canicas, or Cangas, was the capital of the Asturias since the time of Pelagio. Fruela [brother of Alfonso I.] founded Oviedo, to the west, and this State became later on the head of the monarchy." About a century later, in the reign of the vigorous king Alfonso III. [A. D. 866-910], the city of Leon, the ancient Legio of the Romans, was raised from its ruins, and Garcia, the eldest son of Alfonso, established his court there. One of Garcia's brothers held the government of the Asturias, and another one that of Galicia, "if not as separate kingdoms, at least with a certain degree of independence. This equivocal situation of the two princes was, perchance, the reason why the King of Oviedo changed his title to that of Leon, and which appears in the reign of Garcia as the first attempt towards dismembering the Spanish Monarchy. Previous to this, in the reign of King Alfonso III., Navarre, always rebellious, had shaken off the Asturian yoke."— E. McMurdo, *Hist. of Portugal, introd., pt.* 3.

A. D. 756-1031.—The Caliphate of Cordova. See MAHOMETAN CONQUEST AND EMPIRE: A. D. 756-1031.

A. D. 778.—Charlemagne's conquests.—The invasion of Spain by Charlemagne, in 778, was invited by a party among the Saracens, disaffected towards the reigning Caliph, at Cordova, who proposed to place the northern Spanish frontier under the protection of the Christian monarch and acknowledge his suzerainty. He passed the Pyrenees with a great army and advanced with little serious opposition to Saragossa, apparently occupying the country to the Ebro with garrisons and adding it to his dominions as the Spanish March. At Saragossa he encountered resistance and undertook a siege, the results of which are left uncertain. It would seem that he was called away, by threatening news from the northern part of his dominions, and left the

conquest incomplete. The return march of the army, through a pass of the Pyrenees, was made memorable by the perfidious ambuscade and hopeless battle of Roncesvalles, which became immortalized in romance and song. It was in the country of the Gascons or Wascones (Basques) that this tragic event occurred, and the assailants were not Saracens, as the story of the middle ages would have it, but the Gascons themselves, who, in league with their neighbors of Aquitaine, had fought for their independence so obstinately before, against both Charlemagne and his father. They suffered the Franks to pass into Spain without a show of enmity, but laid a trap for the return, in the narrow gorge called the Roscida Vallis—now Roncesvalles. The van of the army, led by the king, went through in safety. The rear-guard, "oppressed with baggage, loitered along the rocky and narrow pathway, and as it entered the solitary gap of Ibayeta, from the lofty precipices on either side an unknown foe rolled suddenly down enormous rocks and trunks of uprooted trees. Instantly many of the troops were crushed to death, and the entire passage was blockaded. . . . The Franks who escaped the horrible slaughter were at once assailed with forks and pikes; their heavy armor, which had served them so well in other fights, only encumbered them amid the bushes and brambles of the ravine; and yet they fought with obstinate and ferocious energy. Cheered on by the prowess of Eghihard, the royal seneschal, of Anselm, Count of the Palace, of Roland, the warden of the Marches of Brittany, and of many other renowned chiefs, they did not desist till the last man had fallen, covered with wounds and blood. . . . How many perished in this fatal surprise was never told; but the event smote with profound effect upon the imagination of Europe; it was kept alive in a thousand shapes by tales and superstitions; heroic songs and stories carried the remembrance of it from generation to generation; Roland and his companions, the Paladins of Karl, untimely slain, became, in the Middle Ages, the types of chivalric valor and Christian heroism; and, seven centuries after their only appearance in history, the genius of Pulci, Boiardo, and Ariosto still preserved in immortal verse the traditions of their glory. . . . Roland is but once mentioned in authentic history, but the romance and songs, which make him a nephew of Karl, compensate his memory for this neglect."—P. Godwin, *Hist. of France: Ancient Gaul, ch.* 16, *with foot-note.*

A. D. 778-885 (?).—Rise of the kingdom of Navarre. See Navarre: Origin of the Kingdom.

A. D. 1026-1230.—The rise of the kingdom of Castile.—"Ancient Cantabria, which the writers of the 8th century usually termed Bardulia, and which, at this period [the 8th century] stretched from the Biscayan sea to the Duero, towards the close of the same century began to be called Castella—doubtless from the numerous forts erected for the defence of the country by Alfonso I. [the third king of Oviedo, or Leon]. As the boundaries were gradually removed towards the south, by the victories of the Christians, the same denomination was applied to the new as well as to the former conquests, and the whole continued subject to the same governor, who had subordinate governors dependent on him. Of the first governors or counts, from the period of its conquest by that prince in 760, to the reign of Ordoño I. (a full century), not even the names are mentioned in the old chroniclers; the first we meet with is that of Count Rodrigo, who is known to have possessed the dignity at least six years,—viz. from 860 to 866." The last count of Castile, Garcia Sanchez, who was the eighth of the line from Rodrigo, perished in his youth by assassination (A. D. 1026), just as he was at the point of receiving the title of king from the sovereign of Leon, together with the hand of the latter's daughter. Castile was then seized by Sancho el Mayor, king of Navarre, in right of his queen, who was the elder sister of Garcia. He assumed it to be a kingdom and associated the crown with his own. On his death, in 1035, he bequeathed this new kingdom of Castile to one of his sons, Fernando, while leaving Navarre to another, and Aragon, then a lordship, to a third. Fernando of Castile, being involved soon afterwards in war with the young king of Leon, won the kingdom of the latter in a single battle, where the last of the older royal dynasty of Spain fell fighting like a valiant knight. The two kingdoms of Castile and Leon were united under this prosperous king (see, also, Portugal: Early history) until his death, A. D. 1065, when Castile passed to Sancho, the eldest of his sons, and Leon to Alfonso, the second. But Sancho soon ousted Alfonso, and Alfonso, biding his time, acquired both crowns in 1072, when Sancho was assassinated. It was this Alfonso who recovered the ancient capital city, Toledo, from the Moslems, and it was in his reign that the famous Cid Campeador, Rodrigo de Bivar, performed his fabulous exploits. The two kingdoms were kept in union until 1157, when they fell apart again and continued asunder until 1230. At that time a lasting union of Castile and Leon took place, under Fernando III., whom the church of Rome has canonized.—S. A. Dunham, *Hist. of Spain and Portugal, bk.* 3, *sect.* 2, *ch.* 1.

A. D. 1031-1086.—Petty and short-lived Moorish kingdoms.—"The decline and dissolution of the Mohammedan monarchy, or western caliphate, afforded the ambitious local governors throughout the Peninsula the opportunity for which they had long sighed—that of openly asserting their independence of Cordova, and of assuming the title of kings. The wali of Seville, Mohammed ben Ismail ben Abid, . . . appears to have been the first to assume the powers of royalty; . . . he declared war against the self-elected king of Carmona, Mohammed ben Abdalla, on whose cities, Carmona and Ecija, he had cast a covetous eye. The brother of Yahia, Edris ben Ali, the son of Hamud, governed Malaga with equal independence. Algeziras had also its sovereigns. Elvira and Granada obeyed Habus ben Maksan: Valencia had for its king Abdelasis Abul Hassan, Almeria had Zohair, and Denia had Mugehid; but these two petty states were soon absorbed in the rising sphere of Valencia. Huesca and Saragossa were also subject to rulers, who though slow to assume the title of kings were not the less independent, since their

sway extended over most of Aragon. The sovereign of Badajos, Abdalla Muslema ben Alaftas, was the acknowledged head of all the confederated governors of Algarve and Lusitania; and Toledo was subject to the powerful Ismail ben Dyluun, who, like the king of Seville, secretly aspired to the government of all Mohammedan Spain."—S. A. Dunham, *Hist. of Spain and Portugal, bk.* 3, *sect.* 1, *ch.* 1 (*v.* 2).—"These petty kings were sometimes fighting against each other, and sometimes joining hands to oppose the down-coming of Christians, until they were startled by a new incursion from Africa . . . which, in consolidating Islam, threatened destruction to the existing kingdoms by the absorption of every one of them in this African vortex. I refer to the coming of the Almoravides."—H. Coppée, *Conquest of Spain by the Arab-Moors, bk.* 8, *ch.* 2 (*v.* 2).

A. D. 1035-1258.—The Rise of the Kingdom of Aragon.—The province of Aragon, with Navarre to the west of it and Catalonia to the east, was included in the Spanish March of Charlemagne. Navarre took the lead among these provinces in acquiring independence, and Aragon became for a time a lordship dependent on the Navarrese monarchy. "The Navarre of Sancho the Great [the same who gathered Castile among his possessions, making it a kingdom, and who reigned from 970 to 1035] stretched some way beyond the Ebro; to the west it took in the ocean lands of Biscay and Guipuzcoa, with the original Castile; to the east it took in Aragon, Ripacurcia and Sobrarbe. . . . At the death of Sancho the Great [A. D. 1035] his momentary dominion broke up. . . . Out of the break-up of the dominion of Sancho came the separate kingdom of Navarre, and the new kingdoms of Castile, Aragon, and Sobrarbe. Of these the two last were presently united, thus beginning the advance of Aragon. . . . The power of Aragon grew, partly by conquests from the Mussulmans, partly by union with the French fiefs to the east. The first union between the crown of Aragon and the county of Barcelona [by marriage, 1131] led to the great growth of the power of Aragon on both sides of the Pyrenees and even beyond the Rhone. This power was broken by the overthrow of King Pedro at Muret—[Pedro II. of Aragon, who allied himself with the Albigenses—see ALBIGENSES: A. D. 1210–1213—and was defeated and slain by Simon de Montfort, at Muret, near Toulouse, September 12, 1213]. But by the final arrangement which freed Barcelona, Roussillon, and Cerdagne, from all homage to France [A. D. 1258], all trace of foreign superiority passed away from Christian Spain. The independent kingdom of Aragon stretched on both sides of the Pyrenees, a faint reminder of the days of the West-Gothic kings."—E. A. Freeman, *Hist. Geog. of Europe, ch.* 12, *sect.* 1.

A. D. 1146-1232.—Invasion and dominion of the Almohades and the decisive battle of Tolosa.—The invasion of Spain by the Moorish Almohades (see ALMOHADES), and their struggle for dominion with the Almoravides, produced, at the outset, great alarm in Christendom, but was productive in the end of many opportunities for the advancement of the Christian cause. In the year 1212 Pope Innocent III. was moved by an appeal from Alfonso VIII. of Castile to call on all Christian people to give aid to their brethren in Spain, proclaiming a plenary indulgence to those who would take up arms in the holy cause. Thousands joined the crusade thus preached, and flocked to the Castilian standards at Toledo. The chief of the Almohades retorted on his side by proclaiming the Algihed or Holy War, which summoned every Moslem in his dominions to the field. Thus the utmost frenzy of zeal was animated on both sides, and the shock of conflict could hardly fail to be decisive, under the circumstances. Substantially it proved to be so, and the fate of Mahometanism in Spain is thought to have been sealed on Las Navas de Tolosa—the Plains of Tolosa—where the two great hosts came to their encounter in July, 1212. The rout of the Moors was complete; "the pursuit lasted till nightfall, and was only impeded by the Moslem corpses."—H. Coppée, *Conquest of Spain by the Arab-Moors, bk.* 8, *ch.* 4 (*v.* 2).

12-15th Centuries.—The old monarchical constitution.—The Castilian and Aragonese Cortes. See CORTES, THE EARLY SPANISH.

A. D. 1212-1238.—Progress of the arms of Castile, Leon, and Aragon.—Succession of the count of Champagne to the throne of Navarre.—Permanent union of the crowns of Leon and Castile.—The founding of the Moorish kingdom of Granada.—Castilian conquest of Cordova.—"Alfonso of Castile died two years after his great victory [of 'las navas de Tolosa']. He left his crown to his only son Henry, a boy of eleven, and the regency to his daughter Berenguela, queen of Leon, who was separated, upon the almost always available plea of too near consanguinity, from her husband Alfonso. Berenguela administered her delegated power ably, but held it only three years: at the end of that time the young king was accidentally killed by a tile falling upon his head. Berenguela was her brother's natural heiress; but idolizing her only son, Ferdinand, whom she had nursed and educated herself, she immediately renounced her claim to the throne in his favour, . . . and caused Ferdinand III. to be acknowledged king: Alfonso IX., however, long continued to disturb his wife and son's government. The king of Aragon [Pedro II.] was recalled immediately after the great battle to the concerns of his French dominions," where he joined his kinsman, the count of Toulouse, as stated above, in resisting the Albigensian crusade, and fell (1213) at Muret. "Whilst Pedro's uncles and brothers were struggling for his succession, the queen-dowager obtained from the Pope an order to Simon de Montfort, the leader of the crusade, to deliver her son [whom the father had given up as hostage before he resolved to commit himself to war with the crusaders] into her hands. Having thus got possession of the rightful heir, she procured the assembling of the Cortes of Aragon, to whom she presented the young king, when nobles, clergy, and town deputies voluntarily swore

allegiance to him. This was the first time such an oath was taken in Aragon, the most limited of monarchies. It had been usual for the Aragonese kings at their coronation to swear observance of the laws, but not to receive in return an oath of fidelity from the people. Henceforward this corresponding oath of fidelity was regularly taken under the following form, celebrated for its singularly bold liberty. 'We, who are as good as you, make you our king to preserve our rights; if not, not.' The Catalans followed the example of their Aragonese brethren in proclaiming James king; but many years elapsed ere he could sufficiently allay the disorders excited by his ambitious uncles to prosecute the war against the Moors. At length the several kings of Castile, Leon, Aragon, and Portugal, were ready, unconnectedly, to invade Mussulman Spain, where Almohade princes and Mohammed aben Hud, a descendant of the kings of Saragossa, were contending for the sovereignty, and many 'walis' were struggling for independent royalty; all far more intent upon gratifying their mutual jealousies and enmities than upon resisting the common foe, with whom, on the contrary, all were willing to enter into alliance in furtherance of their separate views. Under these circumstances, James of Aragon made himself master of the greater part of Valencia, and of the island of Majorca [and subsequently of Minorca]; Ferdinand of Castile extended his conquests in Andalusia; Alfonso of Leon his in Estremadura; and Sancho II. of Portugal, who had lately succeeded to his father Alfonso II., acquired the city of Elvas. . . . Sancho of Navarre took no part in these wars. After . . . the battle of 'las navas de Tolosa' he quitted the career of arms, devoting himself wholly to the internal administration of his kingdom. He had no children, neither had his eldest sister, the queen of England [Berengaria, wife of Richard Cœur de Lion], any. Thence his youngest sister's son, Thibalt, count of Champagne, became his natural heir. But Sancho, judging that the distance between Navarre and Champagne unfitted the two states for being governed by one prince, adopted his kinsman, James of Aragon, and to him, as heir, the Navarrese clergy and nobility, and the count of Champagne himself, prospectively swore fealty. Upon Sancho's death, in 1234, however, the Navarrese, preferring independence under the lineal heir to an union with Aragon, entreated king James to release them from their oaths. He was then engaged in the conquest of Valencia; and unwilling, it may be hoped, to turn his arms from Mahometan enemies against his fellow-Christians, he complied with the request, and Thibalt was proclaimed king of Navarre. Thibalt neglected the wars carried on by his Spanish brother kings against the Mahometans, to accept the command of a crusade for the recovery of Jerusalem. The expedition was unsuccessful, but the reputation of the leader did not suffer. Upon his return, Thibalt followed the example of his uncle in studying only to promote the internal welfare of the country. He introduced the cultivation of the grape and the manufacture of wine into Navarre, with other agricultural improvements. Thibalt is more known as one of the most celebrated troubadours or poets of his day. Prior to Thibalt's accession, the conquering progress of Leon and Castile had been temporarily interrupted. Alfonso of Leon died in 1230, and by his will divided Leon and Galicia between two daughters of his first marriage, wholly overlooking his son Ferdinand. . . . By negociation, however, and the influence which the acknowledged wisdom and virtues of queen Berenguela appear to have given her over every one but her husband, the superior claims of Ferdinand were admitted. The two infantas were amply endowed, and the crowns of Leon and Castile were thenceforward permanently united. With power thus augmented, Ferdinand III. renewed his invasion of the Mussulman states, about the time that Yahie, the last of the Almohade candidates for sovereignty, died, bequeathing his pretensions to Mohammed abu Abdallah aben Alhamar, an enterprising leader, who, in the general confusion, had established himself as king of Jaen, and was the sworn enemy of Yahie's chief rival, Abdallah aben Hud. Ferdinand invaded the dominions of Abdallah, and Mohammed took that opportunity of materially enlarging his own. After a few years of general war, Abdallah aben Hud was assassinated by the partisans of the king of Jaen, and his brother Aly, who succeeded to his pretensions, met a similar fate. Mohammed ben Alhamar was immediately received into the city of Granada, which he made his capital; and thus, in 1238, founded the kingdom of Granada, the last bright relic of Moorish domination in Spain, and the favourite scene of Spanish romance. Had Mohammed succeeded to the Almohade sovereignty in Spain, and his authority been acknowledged by all his Mussulman countrymen, so able and active a monarch might probably have offered effective resistance to Christian conquest. But his dominions consisted only of what is still called the kingdom of Granada, and a small part of Andalusia. The remaining Mahometan portions of Andalusia, Valencia, and Estremadura, as well as Murcia and Algarve, swarmed with independent 'walis' or kings. James of Aragon completed the subjugation of Valencia the following year. Cordova, so long the Moorish capital, was taken by Ferdinand [1235], with other places of inferior note. The Murcian princes avoided invasion by freely offering to become Castilian vassals; and now the conquering troops of Castile and Leon poured into the territories of Mohammed. The king of Granada, unsupported by his natural allies, found himself unequal to the contest, and submitted to become, like his Murcian neighbours, the vassal of Ferdinand. In that capacity he was compelled to assist his Christian liege lord in conquering Mussulman Seville."—M. M. Busk, *Hist. of Spain and Portugal, ch.* 7.

Also in: *Chronicle of James I., King of Aragon, surnamed the Conqueror; tr. by J. Forster.*

A. D. 1238-1273.—The Moorish kingdom of Granada.—The building of the Alhambra.—"A new era had begun in the fortunes of the Moors. Reft of their two magnificent capitals at Cordova and Seville, they had gathered into the extreme south, under the able and beneficent rule of Aben-al-Hamar, who, though a tributary to Castille, termed himself Sultan and Emir of the Faithful, and is usually called King of Granada. Karnattah, as the Arabs had named it, meant the Cream of the West. The Spaniards in later times, deceived by the likeness of the word to Granada, a pomegranate, fancied it to have been thence named, and took the fruit as its emblem.

The kingdom was a mere fragment, and did not even reach to the Straits; for Algesira, the green island, and its great fortresses, belonged to the Africans; and it had in it elements of no small danger, containing as it did the remnants of no less than thirty-two Arab and Moorish tribes, many of them at deadly feud with one another, and divided by their never-ending national enmities. The two great tribes of Abencerrages, or sons of Zeragh, and the Zegris, or refugees from Aragon, were destined to become the most famous of these. The king himself, Mohammed-Abou-Said, was of the old Arabian tribe of Al Hamar, by whose name he is usually called. He was of the best old Arabic type — prudent, just, moderate, temperate, and active, and so upright as to be worthy to belong to this age of great kings, and his plans for his little kingdom were favoured by the peace in which his Christian neighbours left him; while Alfonso X. of Castille was vainly endeavouring to become, not Emperor of Spain alone, but Roman Emperor. The Almohides of Algarvè obeyed neither Alfonso nor Al Hamar, and they united to subdue them. Ten cities were surrendered by the governor on condition that he should enjoy the estates of the King's Garden at Seville, and the tenth of the oil of an oliveyard. There was still a margin of petty walis who preferred a brief independence to a secure tenure of existence as tributaries, and these one by one fell a prey to the Castilians, the inhabitants of their cities being expelled, and adding to the Granadine population. Al Hamar received them kindly, but made them work vigorously for their maintenance. Every nook of soil was in full cultivation; the mountain-sides terraced with vineyards; new modes of irrigation invented; the breeds of horses and cattle carefully attended to; rewards instituted for the best farmers, shepherds, and artisans. The manufacture of silk and wool was actively carried on, also leather-work and sword-cutlery. Hospitals and homes for the sick and infirm were everywhere; and in the schools of Granada the remnants of the scholarship of Cordova and Seville were collected. Granada itself stood in the midst of the Vega, around two hills, each crowned by a fortress: Albayzin, so called by the fugitives from Baeza; and the Al Hâmra [or Alhambra], or Red Fortress. The wall was extended so as to take in its constantly increasing population, and the king began to render the Alhâmra one of the strongest and most beautiful places in existence. Though begun by Al Hamar it was not completed for several generations, each adding to the unrivalled beauty of the interior, for, as usual in Arabian architecture, the outside has no beauty, being a strong fortification of heavy red walls. . . . Mohammed Aben-Al-Hamar died 1273, and his son Mohammed II. followed in his steps."—C. M. Yonge, *The Story of the Christians and Moors of Spain, ch.* 20.

Also in: W. Irving, *The Alhambra.*—J. C. Murphy, *Arabian Antiquities of Spain.*

A. D. 1248-1350.—The conquest of Seville. —The reigns of St. Ferdinand, Alfonso the Learned, and their three successors in Castile. —Seville, which had become the second city of Moslem Spain, its schools and universities rivalling those of Cordova, shared the fate of the latter and surrendered to the Christians on the 22d of December, 1248. "This was the achievement of King Ferdinand III., under whom the crowns of Castile and Leon had become united. His territory extended from the Bay of Biscay to the Guadalquiver, and from the borders of Portugal as far as Arragon and Valencia. His glory was great in the estimation of his countrymen for his conquests over the Moors, and four centuries afterwards he was canonized by the Pope, and is now known as Saint Ferdinand. . . . Ferdinand lived at the same time with another king who was also canonized — Louis IX. of France, who became Saint Louis. . . . The two kings, in fact, were cousins, and the grandmother of both of them was Eleanor, daughter of Henry II. of England. . . . The son of Saint Ferdinand was Alfonso X., called 'El Sabio,' the learned, and not, as it is sometimes translated, 'the wise.' He certainly was not very wise, for he did an immense number of foolish things; but he was such a strange man that it would be interesting to know more about him than it is easy to do. It was a period when not only commerce and industry but literature and art were taking a new start in Europe — the time of Roger Bacon and Dante. Alfonso loved his books, and dabbled in science, and was really one of the learned men of his time. . . . His mind was very naturally disturbed by a glimpse he had of being emperor of Germany [or, to speak accurately, of the Holy Roman Empire]. . . . The dignity was elective," and Alfonso became the candidate of one party among the German electors; but he did not obtain the dignity (see Germany: A. D. 1250–1272). "Ferdinand de la Cerda, the son and heir of Alfonso, died during the lifetime of his father, and a difficulty arose about the succession which extended over a long time. A Cortes was assembled to decide the question, and it was agreed that Sancho, brother to Ferdinand de la Cerda, should be heir to the crown, to the exclusion of the children of Ferdinand, grandchildren of Alfonso. This decision displeased the king of France," who was the uncle of the children set aside. Alfonso "declared in favor of his son Sancho, and came near having a war with France in consequence." Yet Sancho, soon afterwards, was persuaded to rebel against his father, and the latter was reduced to sore straits, having no allies among his neighbors except the king of Morocco. "At last the goaded king assembled his few remaining adherents in Seville, and, in a solemn act, not only disinherited his rebel son Sancho, but called down maledictions on his head. In the same act he instituted his grandsons, the infantes de la Cerda, as his heirs, and after them, in default of issue, the kings of France." But Sancho fell ill after this, and the fondness of his old father revived with such intensity that he sickened of anxiety and grief. "Sancho recovered and was soon as well as ever; but the king grew worse, and soon died [1284], full of grief and affection for his son. He had not, however, revoked his will. Nobody minded the will, and Sancho was proclaimed king. He reigned, and his son and grandson reigned after him." The son was Ferdinand IV., who came to the throne in 1295; the grandson was Alfonso XI., who followed him in 1312. The latter was succeeded in 1350 by his son Pedro, or Peter, surnamed the Cruel, and quite eminent under that sinister designation, especially through the unfortunate connection of the English Black Prince with his later evil fortunes.—E. E. and S. Hale, *The Story of Spain, ch.* 18.

A. D. 1273-1460.—The slow crumbling of the Moorish kingdom of Granada.—The founder of the kingdom of Granada, Aben-Al-Hamar, or Ibnu-l-ahmar, died in 1273. He was "succeeded by his son, Abú Abdillah, known as Mohammed II. Obeying his father's injunctions, he called upon Yahúb, the Sultan of the Beni Merines at Fez, to come to his aid, and captured Algeçiras, to serve as a receptacle and magazine for these African allies. He also presented Tarifa to Yahúb. The two allied forces then went out to meet Nuño de Lara with the Christian frontier troops, and routed him. But Mohammed was soon prevailed upon by his fears to renew the Christian alliance; and the Christian troops, thus freed from one enemy, soon wrested Algeçiras, Tarifa [1291], Ronda, and other towns, from the Beni Merines, who were, all but a small remnant, driven back into Africa. . . . Mohammed II. died in 1302; and was succeeded by a greater king,—Mohammed III., another Abú Abdillah, . . . dethroned by a revolt of his brother, Nasr; but when, in 1312, Nasr in turn was forced to abdicate, he was succeeded by Isma'il Abú-l-Waled, after whom came Mohammed IV., in 1315. Meantime the Christian monarchs were always pressing the Moorish frontier. In 1309, Ferdinand IV. of Castile succeeded in taking Gibraltar, while the troops of Aragon besieged Almeria, and thus the circle was ever narrowing, but not without bloody dispute. When Don Pedro, Infante of Castile, made his great effort against Granada in 1319, he was wofully defeated in the battle of Elvira, and his rich camp despoiled by the Moors. Mohammed IV. succeeded in retaking Gibraltar from the Christians [or, rather, according to Condé, it was taken in 1331 by Mohammed's ally, the king of Fez, to whom Mohammed was forced to cede it]. . . . He was assassinated by his African allies, and succeeded by his brother Yúsuf in 1333. Prompted purely by self-interest, Abu-l-has, another leader, with 60,000 men, beside the contingent from Granada, encountered the Christians near Tarifa in the year 1340, and was defeated with immense loss [in the battle of the Guadacelito or the Salado]. Yúsuf was assassinated by a madman in 1354, and was succeeded by Mohammed V. . . . Driven from his throne by a revolt of his half-brother Isma'il, he first fled for his life to Guadix, and then to Africa, in the year 1359. And all these intestine quarrels were playing into the Christians' hands. Isma'il, the usurper, held the nominal power less than a year, when he was dethroned and put to death. His successor, Mohammed VI., surrounded by difficulties, came to the strange determination to place himself and his kingdom under the protection of that King Pedro of Castile whom history has named 'el cruel,' but whom his adherents called 'el justiciero,' the doer of justice. The Castilian king vindicated his claim to the historic title by putting Mohammed to death, and seizing 'the countless treasures which he and the chiefs who composed his suite brought with them.' To the throne, thus once more vacant by assassination, Mohammed V. returned, and ruled a second time, from 1362 to 1391. . . . Then came the reigns of Yúsuf II. and Mohammed VII., uneventful, except that, in the words of the Arabian chronicler, 'the Mohammedan empire still went on decaying, until it became an easy prey to the infidels, who surrounded it on every side, like a pack of hungry wolves.' Many portents of ruin were displayed, and the public mind was already contemplating the entire success of the Christians." A century of confused struggles ensued, in the course of which Gibraltar was several times besieged by the Christians, and was finally taken by the Duke of Medina Sidonia in 1460. Other strongholds of the Moors fell, one by one, and they "were being more and more restricted to their little kingdom of Granada, and the Christians were strengthening to dislodge and expel them."—H. Coppée, *Hist. of the Conquest of Spain by the Arab-Moors, bk.* 8, *ch.* 5 (*v.* 2).

(Aragon): A. D. 1282-1300.—Acquisition of Sicily by King Peter.—It passes as a separate kingdom to his younger son. See Italy (Southern): A. D. 1282–1300.

A. D. 1366-1369.—Pedro the Cruel of Castile and the invasion of the English Black Prince.—"Pedro the Cruel, King of Castile at this time (1350–1369), had earned his title by a series of murders, which dated from the time he was sixteen years old, and comprised his wife, his stepmother, two of his half-brothers, and a great number of the chief nobles of his kingdom. He was on bad terms with the pope, for he was the friend of Moors and Jews, and had plundered bishops and monasteries; he was hated in the court of France, for his murdered queen was the king's cousin, Blanche de Bourbon; he was at war with the King of Arragon. Instigated by this monarch and by the King of Navarre, the eldest of Pedro's half-brothers, Don Henry of Trastamere, who had been serving for some time with the Free Companions in Languedoc, conceived the idea of uniting them in a grand enterprise against the kingdom of Castile. Charles V. [of France] approved the project, and lent money and his best captain, Du Guesclin; Pope Urban V. contributed his blessing and money; and the Free Lances eagerly embraced a scheme which promised them the plunder of a new country." The expedition "succeeded without bloodshed. The people rose to welcome it, and Don Pedro was forced to escape through Portugal, and take ship hastily at Corunna. Don Henry was crowned in his palace at Burgos (April 1366). In his distress Don Pedro applied to the Prince of Wales [the Black Prince, then holding the government of Aquitaine] for support. There was no reason why England or Aquitaine should be mixed up in Spanish politics. Both countries required rest after an exhausting war. . . . But Pedro was a skilful diplomatist. He bribed the Prince of Wales by a promise to cede the province of Biscay." With the consent of his father, King Edward III. of England, the Prince took up the cause of the odious Don Pedro, and led an army of 24,000 horse, besides great numbers of archers, into Spain (A. D. 1367). At the decisive battle of Navarette the Spaniards and their allies were overwhelmingly defeated, Du Guesclin was taken prisoner, Don Henry fled, and Pedro was reinstated on the Castilian throne. "Then came disappointment. The prince demanded performance of the promises Don Pedro had made, and proposed to stay in Spain till they were acquitted. . . . For some months Edward vainly awaited the performance of his ally's promises. Then, as his troops were wasting away with

dysentery and other diseases caused by the strange climate, till it was said scarcely a fifth remained alive, Edward resolved to remove into Aquitaine, which Don Henry was attacking, and was glad to find that the passes of the Pyrenees were left open to him by the Kings of Arragon and Navarre (August 1367). . . . The results of Edward's mischievous policy soon became evident. All he had achieved in Spain was almost instantly undone by Don Henry, who crossed the Pyrenees a few weeks only after Edward had left Spain (Sept. 1367) recovered his kingdom in the course of the next year, and captured and killed Don Pedro a little later (March 1369). The whole power of Castile, which was far from being contemptible at sea, was then thrown into the scale against England." —C. H. Pearson, *Eng. Hist. in the Fourteenth Century, ch.* 8.

A. D. 1368-1479.— Castile under the House of Trastamere.— Discord and civil war.— Triumph of Queen Isabella.—The Castilian dynasty in Aragon.— Marriage of Isabella and Ferdinand.—"A more fortunate period began [in Castile] with the accession of Henry [of Trastamare, or Henry II.]. His own reign was hardly disturbed by any rebellion; and though his successors, John I. [1379] and Henry III. [1390], were not altogether so unmolested, especially the latter, who ascended the throne in his minority, yet the troubles of their time were slight, in comparison with those formerly excited by the houses of Lara and Haro, both of which were now happily extinct. Though Henry II.'s illegitimacy left him no title but popular choice, his queen was sole representative of the Cerdas, the offspring . . . of Sancho IV.'s elder brother. . . . No kingdom could be worse prepared to meet the disorders of a minority than Castile, and in none did the circumstances so frequently recur. John II. was but fourteen months old at his accession [1406]; and but for the disinterestedness of his uncle Ferdinand, the nobility would have been inclined to avert the danger by placing that prince upon the throne. In this instance, however, Castile suffered less from faction during the infancy of her sovereign than in his maturity. The queen dowager, at first jointly with Ferdinand, and solely after his accession to the crown of Aragon, administered the government with credit. . . . In external affairs their reigns were not what is considered as glorious. They were generally at peace with Aragon and Granada, but one memorable defeat by the Portuguese at Aljubarrota [August 14, 1385] disgraces the annals of John I., whose cause [attempting the conquest of Portugal] was as unjust as his arms were unsuccessful. This comparatively golden period ceases at the majority of John II. His reign was filled up by a series of conspiracies and civil wars, headed by his cousins John and Henry, the infants of Aragon, who enjoyed very extensive territories in Castile, by the testament of their father Ferdinand. Their brother the king of Aragon frequently lent the assistance of his arms. . . . These conspiracies were all ostensibly directed against the favourite of John II., Alvaro de Luna, who retained for 35 years an absolute control over his feeble master. . . . His fate is among the memorable lessons of history. After a life of troubles endured for the sake of this favourite, sometimes a fugitive, sometimes a prisoner, his son heading rebellions against him, John II. suddenly yielded to an intrigue of the palace, and adopted sentiments of dislike towards the man he had so long loved. . . . Alvaro de Luna was brought to a summary trial and beheaded; his estates were confiscated. He met his death with the intrepidity of Strafford, to whom he seems to have borne some resemblance in character. John II. did not long survive his minister, dying in 1454, after a reign that may be considered as inglorious, compared with any except that of his successor. If the father was not respected, the son fell completely into contempt. He had been governed by Pacheco, marquis of Villena, as implicitly as John by Alvaro de Luna. This influence lasted for some time afterwards. But the king inclining to transfer his confidence to the queen, Joanna of Portugal, and to one Bertrand de Cueva, upon whom common fame had fixed as her paramour, a powerful confederacy of disaffected nobles was formed against the royal authority. . . . They deposed Henry in an assembly of their faction at Avila with a sort of theatrical pageantry which has often been described. . . . The confederates set up Alfonso, the king's brother, and a civil war of some duration ensued, in which they had the support of Aragon. The queen of Castile had at this time borne a daughter, whom the enemies of Henry IV., and indeed no small part of his adherents, were determined to treat as spurious. Accordingly, after the death of Alfonso, his sister Isabel was considered as heiress of the kingdom. . . . Avoiding the odium of a contest with her brother, Isabel agreed to a treaty by which the succession was absolutely settled upon her [1469]. This arrangement was not long afterwards followed by the union of that princess with Ferdinand, son of the king of Aragon. This marriage was by no means acceptable to a part of the Castilian oligarchy, who had preferred a connexion with Portugal. And as Henry had never lost sight of the interests of one whom he considered, or pretended to consider, as his daughter, he took the first opportunity of revoking his forced disposition of the crown and restoring the direct line of succession in favour of the princess Joanna. Upon his death, in 1474, the right was to be decided by arms. Joanna had on her side the common presumptions of law, the testamentary disposition of the late king, the support of Alfonso king of Portugal, to whom she was betrothed, and of several considerable leaders among the nobility. . . . For Isabella were the general belief of Joanna's illegitimacy, the assistance of Aragon, the adherence of a majority both among the nobles and people, and, more than all, the reputation of ability which both she and her husband had deservedly acquired. The scale was, however, pretty equally balanced, till the king of Portugal having been defeated at Toro in 1476, Joanna's party discovered their inability to prosecute the war by themselves, and successively made their submission to Ferdinand and Isabella." Ferdinand of Aragon, by whose marriage with Isabella of Castile the two kingdoms became practically united, was himself of Castilian descent, being the grandson of that magnanimous Ferdinand who has been

mentioned above, as the uncle and joint guardian of John II. of Castile. In 1410, on the death of King Martin, the right of succession to the throne of Aragon had been in dispute, and Ferdinand was one of several claimants. Instead of resorting to arms, the contending parties were wisely persuaded to submit the question to a special tribunal, composed of three Aragonese, three Catalans, and three Valencians. "A month was passed in hearing arguments; a second was allotted to considering them; and at the expiration of the prescribed time it was announced to the people . . . that Ferdinand of Castile had ascended the throne. In this decision it is impossible not to suspect that the judges were swayed rather by politic considerations than a strict sense of hereditary right. It was therefore by no means universally popular, especially in Catalonia. . . . Ferdinand however was well received in Aragon. . . . Ferdinand's successor was his son Alfonso V., more distinguished in the history of Italy than of Spain. For all the latter years of his life he never quitted the kingdom that he had acquired by his arms [see ITALY: A. D. 1412–1447]; and, enchanted by the delicious air of Naples, intrusted the government of his patrimonial territories to the care of a brother and an heir. John II., upon whom they devolved by the death of Alfonso without legitimate progeny, had been engaged during his youth in the turbulent revolutions of Castile, as the head of a strong party that opposed the domination of Alvaro de Luna. By marriage with the heiress of Navarre he was entitled, according to the usage of those times, to assume the title of king, and administration of government, during her life. But his ambitious retention of power still longer produced events which are the chief stain on his memory. Charles, prince of Viana, was, by the constitution of Navarre, entitled to succeed his mother [1442]. She had requested him in her testament not to assume the government without his father's consent. That consent was always withheld. The prince raised what we ought not to call a rebellion; but was made prisoner. . . . After a life of perpetual oppression, chiefly passed in exile or captivity, the prince of Viana died in Catalonia [1461], at a moment when that province was in open insurrection upon his account. Though it hardly seems that the Catalans had any more general provocations, they persevered for more than ten years [until the capitulation of Barcelona, after a long siege, in 1472] with inveterate obstinacy in their rebellion, offering the sovereignty first to a prince of Portugal, and afterwards to Regnier duke of Anjou, who was destined to pass his life in unsuccessful competition for kingdoms." Ferdinand, who married Isabella of Castile, was a younger half-brother of prince Charles of Viana, and succeeded his father, John II., on the throne of Aragon, in 1479.— H. Hallam, *The Middle Ages, ch.* 4 (*v.* 2).

A. D. 1476-1492.— The last struggle of the Moors.— Fall of the city and kingdom of Granada.— "The days of the Moorish kingdom were already numbered when, in 1466, Aboul Hacem succeeded Ismael; but the disturbances in Castille emboldened him, and when, in 1476, the regular demand for tribute was made, he answered: 'Those who coined gold for you are dead. Nothing is made at Granada for the Christians but sword-blades and lance-points.' Such was the last proclamation of war from the Moors. Even the Imaums disapproved, and preached in the mosques of Granada, 'Woe to the Moslems in Andalusia!' 'The end is come,' they said; 'the ruins will fall on our heads!' Nevertheless, Aboul Hacem surprised the Aragonese city of Zahara with 60,000 inhabitants, and put them all to the sword or sold them into slavery; but he was not welcomed, evil was predicted, and he became more and more hated when he put four of the Abencerrages to death. The king and queen [Ferdinand, or Fernando, and Isabella] now began to prepare the whole strength of their kingdom for a final effort, not to be relaxed till Spain should be wholly a Christian land. . . . Don Rodrigo Ponce de Leon, who had become Marquis of Cadiz, made a sudden night attack upon Alhama, only eight leagues from Granada, and though the inhabitants fought from street to street he mastered it. . . . Alhama was a terrible loss to the Moors, and was bewailed in the ballad, 'Ay de me Al Hama,' which so moved the hearts of the people that it was forbidden to be sung in the streets of Granada. It has been translated by Byron, who has in fact united two ballads. . . . Alhama had once before been taken by St. Fernando, but could not then be kept, and a council was held by the 'Reyes Catolicos' [Ferdinand and Isabella], in which it was declared that it would take 5,000 mules' burthen of provisions sent several times a year, to support a garrison thus in the heart of the enemy's country. The high spirit of the queen, however, carried the day. She declared that the right thing to do was to take Loja to support Alhama, and, after causing the three chief mosques to be purified as Christian churches, she strained every effort [1482] to equip an army with which Fernando was to besiege Loja. On the day before he set out Isabel gave birth to twins—one dead, the other a daughter; and this was viewed as an ill omen. . . . Ali Atar, one of the bravest of the Moors, defeated Fernando and forced him to retreat with the loss of his baggage. Aboul Hacem was prevented from following up his success by the struggles of the women in his harem. His favourite wife was a Christian by birth, named Isabel de Solis, the daughter of the Alcayde of Bedmar; but she had become a renegade, and was commonly called Zoraya, or the Morning Star. Childless herself, she was vehemently set on the promotion of Abou-Abd-Allah, son of another wife, Ayescha, who is generally known by the Spanish contraction of his name, Boabdil; also in Arabic as Al Zaquir, the little, and in Spanish as 'el Rey Chico.' Such disaffection was raised that Aboul Hacem was forced to return home, where he imprisoned Ayescha and her son; but they let themselves down from the window with a rope twisted of the veils of the Sultana's women, and, escaping to the palace or Albaycin, there held out against him, supported by the Abencerrages. The Zegris held by Aboul Hacem, and the streets of Granada ran red with the blood shed by the two factions till, in 1482, while the elder king was gone to relieve Loja,

the younger one seized the Alhamra; and Aboul Hacem, finding the gates closed against him, was obliged to betake himself to Malaga, where his brother Abd Allah, called Al Zagal, or the young, was the Alcayde."—C. M. Yonge, *The Story of the Christians and Moors in Spain, ch.* 24.—"The illegal power of Boabdil was contested by his uncle, Az-Zagal (El Zagal), who held a precarious sway for four years, until 1487, when Boabdil again came to the throne. This was rendered more easy by the fact that, in a battle between the Moors and Christians in the territory of Lucena, not long after his accession, Boabdil was taken prisoner by the Christian forces. By a stroke of policy, the Christian king released his royal prisoner, in the hope that through him he might make a treaty. Boabdil went to Loja, which was at once besieged by Ferdinand, and this time captured, and with it the Moorish king again fell into the Christian hands. Again released, after many difficulties he came into power. The Christian conquests were not stayed by these circumstances. In 1487, they captured Velez Malaga, on the coast a short distance east of Malaga, and received the submission of many neighboring towns. In the same year Malaga was besieged and taken. In 1489, Baeza followed; then the important city of Almeria, and at last the city of Granada stood alone to represent the Mohammedan dominion in the Peninsula. The strife between Boabdil and El Zagal now came to an end; and the latter, perhaps foreseeing the fatal issue, embarked for Africa, leaving the nominal rule and the inevitable surrender to his rival. . . . The army of Ferdinand and Isabella was in splendid condition, and reinforcements were arriving from day to day. System and order prevailed, and the troops, elated with victory, acknowledged no possibility of failure. Very different was the condition of things and very depressed the spirit of the people in Granada. Besides its own disordered population, it was crowded with disheartened fugitives, anxious for peace on any terms. The more warlike and ambitious representatives of the tribes were still quarrelling in the face of the common ruin, but all parties joined in bitter denunciations of their king. When he had been released by Ferdinand after the capture of Loja, he had promised that when Guadix should be taken and the power of El Zagal destroyed, he would surrender Granada to the Christian king, and retire to some seignory, as duke or marquis. But now that the 'casus' had arrived, he found . . . that the people would not permit him to keep his promise. . . . The only way in which Boabdil could appease the people was by an immediate declaration of war against the Christians. This was in the year 1490. When this was made known, Ferdinand and Isabella were at Seville, celebrating the marriage of the Infanta Isabel with Alfonso, crown prince of Portugal. The omen was a happy one. The armies of Spain and Portugal were immediately joined to put an end to the crusade. With 5,000 cavalry and 20,000 foot, the Spanish king advanced to the Sierra Elvira, overlooking the original site of the Granadine capital. The epic and romantic details of the conquest may be read elsewhere. . . . There were sorties on the part of the Moors, and chivalrous duels between individuals, until the coming of winter, when, leaving proper guards and garrisons, the principal Christian force retired to Cordova, to make ready for the spring. El Zagal had returned from Africa, and was now fighting in the Christian ranks. It was an imposing army which was reviewed by Ferdinand on the 26th of April, 1491, in the beautiful Vega, about six miles from the city of Granada; the force consisted of 10,000 horse and 40,000 foot, ready to take position in the final siege. . . . It was no part of the Spanish king's purpose to assault the place. . . . He laid his siege in the Vega, but used his troops in devastating the surrounding country, taking prisoners and capturing cattle. . . . Meantime the Christian camp grew like a city, and when Queen Isabella came with her train of beauty and grace, it was also a court city in miniature." In July, an accidental fire destroyed the whole encampment, and roused great hopes among the Moors. But a city of wood (which the pious queen called Santa Fé — the Holy Faith) soon took the place of the tents, and "the momentary elation of the Moors gave way to profound depression; and this induced them to capitulate. The last hour had indeed struck on the great horologe of history; and on the 25th of November the armistice was announced for making a treaty of peace and occupancy."— H. Coppée, *Hist. of the Conquest of Spain by the Arab-Moors, bk.* 8, *ch.* 5 (*v.* 2).—"After large discussion on both sides, the terms of capitulation were definitively settled. . . . The inhabitants of Granada were to retain possession of their mosques, with the free exercise of their religion, with all its peculiar rights and ceremonies; they were to be judged by their own laws, under their own cadis or magistrates, subject to the general control of the Castilian governor; they were to be unmolested in their ancient usages, manners, language, and dress; to be protected in the full enjoyment of their property, with the right of disposing of it on their own account, and of migrating when and where they would; and to be furnished with vessels for the conveyance of such as chose within three years to pass into Africa. No heavier taxes were to be imposed than those customarily paid to their Arabian sovereigns, and none whatever before the expiration of three years. King Abdallah [Boabdil] was to reign over a specified territory in the Alpuxarras, for which he was to do homage to the Castilian crown. . . . The city was to be surrendered in 60 days from the date of the capitulation;" but owing to popular disturbances in Granada, the surrender was actually made on the 2d of January, 1492. Boabdil soon tired of the petty sovereignty assigned to him, sold it to Ferdinand and Isabella, passed over to Fez, and perished in one of the battles of his kinsmen.— W. H. Prescott, *Hist. of the Reign of Ferdinand and Isabella, ch.* 15.

A. D. 1496-1517.—Marriage of the Infanta Joanna to the Austro-Burgundian Archduke Philip.—Birth of their son Charles, the heir of many crowns.—Insanity of Joanna.—Death of Queen Isabella.—Regency of Ferdinand.—His second marriage and his death.—Accession of Charles, the first of the Austro-Spanish dynasty.—Joanna, second daughter of Ferdinand and Isabella, was married in 1496 to "the archduke Philip, son of the emperor Maximilian, and sovereign, in right of his mother [Mary of Burgundy], of the Low Countries. The first fruit of this marriage was the celebrated Charles V., born at Ghent, February 24th, 1500, whose birth was no sooner announced to Queen Isabella than she predicted that to this infant would one day descend the rich inheritance of the Spanish monarchy. The premature death of the heir apparent, Prince Miguel, not long after [and also of the queen of Portugal, the elder daughter of Isabella and Ferdinand], prepared the way for this event by devolving the succession on Joanna, Charles's mother. From that moment the sovereigns were pressing in their entreaties that the archduke and his wife would visit Spain. . . . In the latter part of 1501, Philip and Joanna, attended by a numerous suite of Flemish courtiers, set out on their journey," passing through France and being royally entertained on the way. In Spain, they first received the usual oath of fealty from the Castilian cortes, and then "were solemnly recognized by the four 'arms' of Aragon as successors to the crown, in default of male issue of King Ferdinand. The circumstance is memorable as affording the first example of the parliamentary recognition of a female heir apparent in Aragonese history. Amidst all the honors so liberally lavished on Philip, his bosom secretly swelled with discontent, fomented still further by his followers, who pressed him to hasten his return to Flanders, where the free and social manners of the people were much more congenial to their tastes than the reserve and stately ceremonial of the Spanish court. . . . Ferdinand and Isabella saw with regret the frivolous disposition of their son-in-law. . . . They beheld with mortification his indifference to Joanna, who could boast few personal attractions, and who cooled the affections of her husband by alternations of excessive fondness and irritable jealousy." Against the remonstrances of king, queen and cortes, as well as in opposition to the wishes of his wife, Philip set out for Flanders in December, again traveling through France, and negotiating on the way a treaty with Louis XII. which arranged for the marriage of the infant Charles with princess Claude of France—a marriage which never occurred. The unhappy Joanna, whom he left behind, was plunged in the deepest dejection, and exhibited ere long decided symptoms of insanity. On the 10th of March, 1503, she gave birth to her second son, Ferdinand, and the next spring she joined her husband in Flanders, but only to be worse treated by him than before. Queen Isabella, already declining in health, was deeply affected by the news of her daughter's unhappiness and increasing disturbance of mind, and on the 26th of November, 1504, she died. By her will, she settled the crown of Castile on the infanta Joanna as "queen proprietor," and the archduke Philip as her husband, and she appointed King Ferdinand (who was henceforth king in Aragon, but not in Castile), to be sole regent of Castile, in the event of the absence or incapacity of Joanna, until the latter's son Charles should attain his majority. On the day of the queen's death Ferdinand resigned the crown of Castile, which he had worn as her consort, only, and caused to be proclaimed the accession of Joanna and Philip to the Castilian throne. "The king of Aragon then publicly assumed the title of administrator or governor of Castile, as provided by the queen's testament." He next convened a cortes at Toro, in January, 1505, which approved and ratified the provisions of the will and "took the oaths of allegiance to Joanna as queen and lady proprietor, and to Philip as her husband. They then determined that the exigency contemplated in the testament, of Joanna's incapacity, actually existed, and proceeded to tender their homage to King Ferdinand, as the lawful governor of the realm in her name." These arrangements were unsatisfactory to many of the Castilian nobles, who opened a correspondence with Philip, in the Netherlands, and persuaded him "to assert his pretensions to undivided supremacy in Castile." Opposition to Ferdinand's regency increased, and it was fomented not only by Philip and his friends, but by the king of France, Louis XII. To placate the latter enemy, Ferdinand sought in marriage a niece of the French king, Germaine, daughter of Jean de Foix, and negotiated a treaty, signed at Blois, October 12, 1505, in which he resigned his claims on Naples to his intended bride and her heirs. Louis was now detached from the interests of Philip, and refused permission to the archduke to pass through his kingdom. But Ferdinand, astute as he was, allowed himself to be deceived by his son-in-law, who agreed to a compromise, known as the concord of Salamanca, which provided for the government of Castile in the joint names of Ferdinand, Philip, and Joanna, while, at the same time, he was secretly preparing to transfer his wife and himself to Spain by sea. On the first attempt they were driven to England by a storm; but in April, 1506, Philip and Joanna landed at Coruña, in Spain, and in June Ferdinand was forced to sign and swear to an agreement "by which he surrendered the entire sovereignty of Castile to Philip and Joanna, reserving to himself only the grand-masterships of the military orders, and the revenues secured by Isabella's testament." Philip took the government into his own hands, endeavoring to obtain authority to place his wife in confinement, as one insane; but this the Castilians would not brook. Otherwise he carried things with a high hand, surrounding himself with Flemish favorites, and revolutionizing the government in every branch and the court in every feature. His insolence, extravagance and frivolity excited general disgust, and would probably have provoked serious revolts, if the country had been called

upon to endure them long. But Philip's reign was brief. He sickened, suddenly, of a fever, and died on the 25th of September, 1506. His demented widow would not permit his body to be interred. A provisional council of regency carried on the government until December. After that it drifted, with no better authoritative guidance than that of the poor insane queen, until July 1507, when Ferdinand, who had been absent, in Naples, during the year past, returned and was joyfully welcomed. His unfortunate daughter "henceforth resigned herself to her father's will. . . . Although she survived 47 years, she never quitted the walls of her habitation; and although her name appeared jointly with that of her son, Charles V., in all public acts, she never afterwards could be induced to sign a paper, or take part in any transactions of a public nature. . . . From this time the Catholic king exercised an authority nearly as undisputed, and far less limited and defined, than in the days of Isabella." He exercised this authority for nine years, dying on the 23d of January, 1516. By his last will he settled the succession of Aragon and Naples on his daughter Joanna and her heirs, thus uniting the sovereignty of those kingdoms with that of Castile, in the same person. The administration of Castile during Charles' absence was intrusted to Ximenes, and that of Aragon to the king's natural son, the archbishop of Saragossa. In September, 1517, Charles, the heir of many kingdoms, arrived in Spain from the Netherlands, where his youth had been spent. Two months later Cardinal Ximenes died, but not before Charles had rudely and ungratefully dismissed him from the government. The queen, Joanna, was still living; but her arbitrary son had already commanded the proclamation of himself as king.—W. H. D. 1518-1522.—Popular discontent.—Election of Charles to the German imperial throne.—Rebellion of the Holy Junta, and its failure.—Absolutism of the crown established.—Charles had not been long in Spain before "symptoms of discontent . . . were every where visible. Charles spoke the Spanish language imperfectly: his discourse was consequently slow, and delivered with hesitation; and from that circumstance many of the Spaniards were induced to regard him as a prince of a slow and narrow genius. But the greatest dissatisfaction arose from his attachment to his Flemish favourites, who engrossed or exposed to sale every office of honour or emolument, and whose rapacity was so unbounded that they are said to have remitted to the Netherlands no less a sum than 1,100,000 ducats in the space of ten months. . . . While Spain, agitated by a general discontent, was ready for rebellion, a spacious field was opened to the ambition of her monarch. The death of the Emperor Maximilian [1519] had left vacant the imperial throne of Germany. The Kings of Spain, of France, and of England, offered themselves as candidates for this high dignity," and Charles was chosen, entering now upon his great career as the renowned Emperor, Charles V. (see GERMANY: A. D. 1519). "Charles received the news of his election to the imperial throne with the joy that was natural to a young and aspiring mind. But his elevation was far from affording the same satisfaction to his Spanish subjects, who foresaw that their blood and their treasures would be lavished in the support of German politics." With great difficulty he obtained from the Cortes money sufficient to enable him to proceed to Germany in a suitable style. Having accomplished this, he sailed from Corunna in May, 1520, leaving his old preceptor, now Cardinal Adrian, of Utrecht, to be Regent during his absence. "As soon as it was understood that, although the Cortes had voted him a free gift, they had not obtained the redress of any grievance, the indignation of the people became general and uncontrollable. The citizens of Toledo took arms, attacked the citadel, and compelled the governor to surrender. Having, in the next place, established a democratical form of government, composed of deputies from the several parishes of the city, they levied troops, and appointed for their commander Don Juan de Padilla, son of the Commendator of Castile, a young man of an ambitious and daring spirit, and a great favourite with the populace. Segovia, Burgos, Zamora, and several other cities, followed the example of Toledo." Segovia was besieged by Fonseca, commander-in-chief in Castile, who, previously, destroyed a great part of the town of Medino del Campo by fire, because its citizens refused to deliver to him a train of artillery. Valladolid now rose in revolt, notwithstanding the presence of the Regent in the city, and forced him to disavow the proceedings of Fonseca.—J. Bigland, *Hist. of Spain, v.* 1, *ch.* 12.—"In July [1520], deputies from the principal Castilian cities met in Avila; and having formed an association called the Santa Junta, or Holy League, proceeded to deliberate concerning the proper methods of redressing the grievances of the nation. The Junta declared the authority of Adrian illegal, on the ground of his being a foreigner, and required him to resign it; while Padilla, by a sudden march, seized the person of Joanna at Tordesillas. The unfortunate queen displayed an interval of reason, during which she authorised Padilla to do all that was necessary for the safety of the kingdom; but she soon relapsed into her former imbecility, and could not be persuaded to sign any more papers. The

Junta nevertheless carried on all their deliberations in her name; and Padilla, marching with a considerable army to Valladolid, seized the seals and public archives, and formally deposed Adrian. Charles now issued from Germany circular letters addressed to the Castilian cities, making great concessions, which, however, were not deemed satisfactory by the Junta; who, conscious of their power, proceeded to draw up a remonstrance, containing a long list of grievances. . . . Charles having refused to receive the remonstrance which was forwarded to him in Germany, the Junta proceeded to levy open war against him and the nobles; for the latter, who had at first sided with the Junta, finding their own privileges threatened as well as those of the King, began now to support the royal authority. The army of the Junta, which numbered about 20,000 men, was chiefly composed of mechanics and persons unacquainted with the use of arms; Padilla was set aside, and the command given to Don Pedro de Giron, a rash and inexperienced young nobleman." From this time the insurrection failed rapidly. In December, the royalists recovered Tordesillas and the person of Queen Joanna; and in April, 1521, Padilla was defeated, taken prisoner and executed, near Villalar. "This defeat proved the ruin of the Junta. Valladolid and most of the other confederated towns now submitted, but Toledo, animated by the grief and courage of Padilla's widow, still held out." Even after the surrender of the city, "Doña Maria retired to the citadel and held it four months longer; but on the 10th Feb. 1522, she was compelled to surrender, and escaped in disguise to Portugal; after which tranquillity was re-established in Castile."—T. H. Dyer, *Hist. of Modern Europe, bk.* 2, *ch.* 3 (*v.* 1).—"The insurrection was a failure; and the blow which crushed the insurgents on the plains of Villalar deprived them [the Spaniards at large] for ever of the few liberties which they had been permitted to retain. They were excluded from all share in the government, and were henceforth summoned to the cortes only to swear allegiance to the heir apparent, or to furnish subsidies for their master. . . . The nobles, who had stood by their master in the struggle, fared no better. . . . They gradually sunk into the unsubstantial though glittering pageant of a court. Meanwhile the government of Castile, assuming the powers of both making the laws and enforcing their execution, became in its essential attributes nearly as absolute as that of Turkey."—W. H. Prescott, *Hist. of the Reign of Philip II., bk.* 6, *ch.* 1.

A. D. 1559-1563.—Early measures of Philip II.—His stupid and stifling despotism.—His attempt to shut knowledge out of the kingdom.—His destruction of commerce and industry.—His choice of Madrid for a capital.—His building of the Escorial.—"In the beginning of his reign he [Philip II.] issued a most extraordinary decree. . . . That document is a signal revelation of the policy which Philip adopted as the very soul of his Government. Determined to stop by all imaginable means the infiltration into Spain of the doctrines of the religious reformation which agitated Europe, it seems that he planned to isolate her intellect from that of the rest of the world. . . . For this purpose he ordered that none of his subjects, without any exception whatever, should leave the Kingdom 'to learn, or to teach, or to read anything,' or even 'reside' in any of the universities, colleges or schools established in foreign parts. To those who were thus engaged he prescribed that they should return home within four months. Any ecclesiastic violating this decree was to be denationalized and lose all his temporalities; any layman was to be punished with the confiscation of his property and perpetual exile. Thus a sort of Chinese legislation and policy was adopted for Spain. There was to be on her frontiers a line of custom-houses through which the thought of man could not pass without examination. No Spaniard was to receive or to communicate one idea without the leave of Philip. . . . In 1560, the Cortes of Castile had their second meeting under the reign of Philip. . . . The Cortes presented to Philip one hundred and eleven petitions. . . . To those petitions which aimed at something practicable and judicious he gave some of his usual evasive answers, but he granted very readily those which were absurd. For instance, he promulgated sumptuary ordinances which were ridiculous, and which could not possibly have any salutary effects. He also published decrees which were restrictive of commerce, and prohibited the exportation of gold, silver, grains, cattle and other products of the soil, or of the manufacturing industry of the country. . . . In the meantime, the financial condition of the Kingdom was rapidly

growing worse, and the deficit resulting from the inequality of expenditure and revenue was assuming the most alarming proportions. All the ordinary and extraordinary means and resources had been exhausted. . . . Yet, on an average, Philip received annually from his American Dominions alone more than 1,200,000 ducats — which was at least equivalent to $6,000,000 at the present epoch. The Council of Finances, or Hacienda, after consulting with Philip, could not devise anything else, to get out of difficulty, than to resort again to the sale of titles of nobility, the sale of vassals and other Royal property, the alienation of certain rights, and the concession of privileges. . . . It is difficult to give an idea of the wretched administration which had been introduced in Spain, and of those abuses which, like venomous leeches, preyed upon her vitals. Suffice it to say that in Castile, for instance, according to a census made in 1541, there was a population of near 800,000 souls, and that out of every eight men there was one who was noble and exempt from taxation, thereby increasing the weight of the burden on the shoulders of the rest; and as if this evil was not already unbearable, Philip was selling profusely letters patent of nobility. . . . In these conjunctures [1560], Philip, who had shown, on all occasions, that he preferred residing in Madrid, . . . determined to make that city the permanent seat of the Court and of the Supreme Government, and therefore the capital of the Monarchy. That barren and insalubrious locality presented but one advantage, if it be one of much value, that of being a central point. . . . Reason and common sense condemned it from the beginning. . . . Shortly after having selected Madrid as his capital, Philip had laid [1563] with his own hands, in the vicinity of that city, the first stone of the foundations of the Escorial, that eighth marvel of the world, as it is called by the Spaniards."— C. Gayarré, *Philip II. of Spain, ch.* 4.—"The common tradition that Philip built the Escorial in pursuance of a vow which he made at the time of the great battle of St. Quentin, the 10th of August, 1557, has been rejected by modern critics. . . . But a recently discovered document leaves little doubt that such a vow was actually made. However this may have been, it is certain that the king designed to commemorate the event by this structure, as is intimated by its dedication to St. Lawrence, the martyr on whose day the victory was gained. The name given to the place was 'El Sitio de San Lorenzo el Real.' But the monastery was better known from the hamlet near which it stood — El Escurial, or El Escorial — which latter soon became the orthography generally adopted by the Castilians. . . . The erection of a religious house on a magnificent scale, that would proclaim to the world his devotion to the Faith, was the predominant idea in the mind of Philip. It was, moreover, a part of his scheme to combine in the plan a palace for himself. . . . The site which, after careful examination, he selected for the building, was among the mountains of the Guadarrama, on the borders of New Castile, about eight leagues northwest of Madrid. . . . In 1584, the masonry of the Escorial was completed. Twenty-one years had elapsed since the first stone of the monastery was laid. This certainly must be regarded as a short period for the erection of so stupendous a pile. . . . Probably no single edifice ever contained such an amount and variety of inestimable treasures as the Escorial, — so many paintings and sculptures by the greatest masters, — so many articles of exquisite workmanship, composed of the most precious materials." It was despoiled by the French in 1808, and in 1837 the finest works of art surviving were removed to Madrid. "The Escorial ceased to be a royal residence. Tenantless and unprotected, it was left to the fury of the blasts which swept down the hills of the Guadarrama."— W. H. Prescott, *Hist. of the Reign of Philip II., bk.* 6, *ch.* 2 (*v.* 3).

A. D. 1596. — Capture and plundering of Cadiz by the English and Dutch.—"In the beginning of 1596, Philip won an important triumph by the capture of Calais. But this awoke the alarm of England and of the Hollanders as much as of the French. A joint expedition was equipped against Spain in which the English took the lead. Lord Admiral Howard sailed with a fleet of 150 vessels against Cadiz, and the Earl of Essex commanded the land forces. On June 21 the Spanish ships which assembled for the defence of the town were entirely defeated. Essex was the first to leap on shore, and the English troops easily took the city. The clem-

ency of the English soldiers contrasted favourably with the terrible barbarities of the Spaniards in the Netherlands. 'The mercy and the clemency that had been showed here,' wrote Lord Howard, 'will be spoken of throughout the world.' No man or woman was needlessly injured; but Cadiz was sacked, and the shipping in its harbour destroyed. Essex wished to follow up this exploit by a further attack upon Spain; but Howard, who had accomplished the task for which he had been sent, insisted on returning home."—M. Creighton, *The Age of Elizabeth, bk. 7, ch. 3.*—"The results of this expedition were considerable, for the king's navy was crippled, a great city was destroyed, and some millions of plunder had been obtained. But the permanent possession of Cadiz, which, in such case, Essex hoped to exchange for Calais, and the destruction of the fleet at the Azores—possible achievements both, and unwisely neglected—would have been far more profitable, at least to England."—J. L. Motley, *Hist. of the United Netherlands, ch. 32 (v. 3).*

A. D. 1598.—Accession of Philip III.

A. D. 1598-1700.—The first century of decline and decay.—"Spain became united and consolidated under the Catholic kings [Ferdinand and Isabella]; it became a cosmopolitan empire under Charles; and in Philip, austere, bigoted, and commanding, its height of glory was reached. Thenceforth the Austrian supremacy in the peninsula—the star of the House of Habsburg—declined, until a whiff of diplomacy was sufficient to extinguish its lights in the person of the childless and imbecile Charles II. Three reigns—Philip III. (1598–1621), Philip IV. (1621–1665), and Charles II. (1665–1700)—fill this century of national decline, full as it is of crowned idiocy, hypochondria, and madness, the result of incestuous marriages, or natural weakness. The splendid and prosperous Spanish empire under the emperor and his son—its vast conquests, discoveries and foreign wars,—becomes transformed into a bauble for the caprice of favorites, under their successors. . . . Amid its immeasurable wealth, Spain was bankrupt. The gold, and silver, and precious stones of the West, emptied themselves into a land the poorest and most debt-laden in Europe, the most spiritually ignorant despite the countless churches, the most notorious for its dissolute nobility, its worthless officials, its ignoble family relations, its horrible moral aberrations pervading all grades of the population; and all in vain. The mighty fancy, the enthusiastic loyalty, the fervid faith of the richly endowed Spaniard were not counterbalanced by humbler but more practical virtues,—love of industry, of agriculture, of manufactures. The Castilians hated the doings of citizens and peasants; the taint of the Arab and the Jew was on the profession of money-getting. Thousands left their ploughs and went to the Indies, found places in the police, or bought themselves titles of nobility, which forthwith rendered all work dishonorable. The land grew into a literal infatuation with miracles, relics, cloisters, fraternities, pious foundations of every description. The church was omnipotent. Nobody cultivated the soil. Hundreds of thousands lived in the convents. Begging soup at the monastery gates,—such is a type of the famishing Spain of the 17th century. In economic, political, physical, moral, and intellectual aspects, a decay pervaded the peninsula under the later Habsburgers, such as no civilized nation has ever undergone. The population declined from 10,000,000 under Charles V. (Charles I. of Spain) to 6,000,000 under Charles II. The people had vanished from hundreds of places in New Castile, Old Castile, Toledo, Estremadura, and Andalusia. One might travel miles in the lovely regions of the South, without seeing a solitary cultivated field or dwelling. Seville was almost depopulated. Pecuniary distress at the end of the 17th century reached an unexampled height; the soldiers wandered through the cities begging; nearly all the great fortresses from Barcelona to Cadiz were ruinous; the king's servants ran away because they were neither paid nor fed; more than once there was no money to supply the royal table; the ministers were besieged by high officials and officers seeking to extort their pay long due; couriers charged with communications of the highest importance lingered on the road for lack of means to continue their journey. Finance was reduced to tricks of low deceit and robbery. . . . The idiocy of the system of taxation was unparalleled. Even in 1594 the cortes complained that the merchant, out of every 1,000 ducats capital, had to pay 300 ducats in taxes; that no tenant-farmer could maintain himself, however low his rent might be; and that the taxes exceeded the income of numerous estates. Bad as the system was under Philip II., it became worse under his Austrian successors. The tax upon the sale of food, for instance, increased from ten to fourteen per cent. Looms were most productive when they were absolutely silent. Almost the entire household arrangements of a Spanish family were the products of foreign industries. In the beginning of the 17th century, five-sixths of the domestic and nine-tenths of the foreign trade were in the hands of aliens. In Castile, alone, there were 160,000 foreigners, who had gained complete possession of the industrial and manufacturing interests. 'We cannot clothe ourselves without them, for we have neither linen nor cloth; we cannot write without them, for we have no paper,' complains a Spaniard. Hence, the enormous masses of gold and silver annually transmitted from the colonies passed through Spain into French, English, Italian, and Dutch pockets. Not a real, it is said, of the 35,000,000 of ducats which Spain received from the colonies in 1595, was found in Castile the following year. In this indescribable retrogression, but one interest in any way prospered—the Church. The more agriculture, industry, trade declined, the more exclusively did the Catholic clergy monopolize all economic and intellectual life."—J. A. Harrison, *Spain, ch. 23.*

A. D. 1637-1640.—The war on the French frontier.—Siege and battle of Fontarabia.—French invasion of Roussillon.—Causes of disaffection in Catalonia.—In 1637, a Spanish army, 12,000 strong, crossed the Pyrenees under the command of the Duke of Medina del Rio-Seco, Admiral of Castile. "He took St Jean-de-Luz without difficulty, and was advancing to the siege of Bayonne, when the old Duke d'Epernon, governor of Guienne, . . . threw himself into it. There was little time for preparations; but the Spanish commander, on being told he would find Bayonne destitute of defence, replied that could not be said of any place which contained the Duke d'Epernon. He accordingly refrained from laying siege to Bayonne; and all his other enterprises having failed from the vigilant activity of Epernon, he abandoned St Jean-de-Luz, with some other posts in its neighbourhood, and the seat of war was speedily transferred from Guienne to Languedoc: Olivarez, in forming his plans against that province, had expected a revolt among its numerous and often rebellious inhabitants. . . . The hopes, however, entertained by Olivarez . . . proved utterly fallacious." The Spanish army, under Serbellone, invested Leucate, the first fortress reached on entering Languedoc from Roussillon, and besieged it for a month; but was attacked at the end of that time by the Duke de Halluin, son of the late Mareschal Schomberg, and driven from its works, with the loss of all its artillery, and 3,000 men. "In the following season [1638] the French, in their turn, attempted the invasion of Spain, but with as little success as the Spaniards had obtained in Guienne or Languedoc. . . . An army, amounting to not less than 15,000 infantry and 2,000 cavalry, under the orders of the Prince of Condé, the father of the great Condé, and a devoted retainer of Richelieu, crossed the frontier, took Irun, and laid siege to Fontarabia, which is situated on a peninsula, jutting into the river Bidassoa. A formidable French fleet was, at the same time, stationed on the coast of Guipuscoa, to co-operate with this army," and, after failing in one attack, it succeeded in destroying the Spanish ships sent to the succor of Fontarabia. "Fontarabia being considered as the key to Spain, on the entrance to the kingdom from Bayonne, its natural strength had been greatly improved by fortifications." Its garrison held out stoutly until the arrival of a relieving army of 13,000, led by the Admiral of Castile. Nearly a month elapsed before the latter ventured to attack the besieging force; but when he did, "while the Spaniards lost only 200 men, the French were totally defeated, and precipitately driven forth from their intrenchments. Many of them were killed in the attack, and a still greater number were drowned in attempting to pass the Bidassoa. Those who escaped fled with precipitation to Bayonne. . . . But Spain was hardly relieved from the alarm of the invasion of Navarre when she was threatened with a new danger, on the side of Roussillon. The Prince of Condé . . . was again entrusted with a military expedition against the Spanish frontiers. . . . The small county of Roussillon, which had hitherto belonged to Spain as an appendage of Catalonia, lies on the French side of the higher Pyrenees; but a lower range of mountains, called the Courbieres, branching off from them, and extending within a league of the Mediterranean shore, divides Roussillon from Languedoc. At the extremity of these hills, and about a league from the sea, stood the fortress of Salsas [or Salces], which was considered as the key of Spain on the dangerous side of Roussillon and Catalonia." Salsas was invested by the French, 1639, and taken after a siege of forty days. But Olivarez, the Spanish minister, adopted measures for the recovery of the important fortress, so energetic, so peremptory, and so unmeasured in the exactions they made upon the people of Catalonia, that Salsas was retaken in January, 1640. "The long campaign in the vicinity of Salsas, though it proved ultimately prosperous to the Spanish arms, fostered in the bosom of the kingdom the seeds of rebellion. Those arbitrary measures which Olivarez enjoined to his Generals, may have gained Salsas, but they lost Catalonia. The frequent intercourse which took place between the Catalans and French soldiery, added fuel to those flames nearly ready to burst forth, and, shortly afterwards, excited the fatal insurrection at Barcelona."—J. Dunlop, *Memoirs of Spain during the Reigns of Philip IV. and Charles II.*, *v.* 1, *ch.* 4.

A. D. 1640-1642.—Revolt of Catalonia and Portugal, with the aid of France.—French conquest of Roussillon.—After their defeat of Condé at Salces, Olivarez ordered the Castilian troops to take up their winter quarters in Catalonia; and, "commanding the Catalonians to raise and equip 6,000 soldiers for the wars of Italy, he assigned them their proportion of the expenses of the state, enjoining the states to raise it, by a decree of the king. Had the Castillian troops remained tranquil and orderly, overawing the Catalonians by their presence and their discipline, without enraging them by their excesses and their insolence, perhaps Olivarez might have carried through his bold design, and annihilated, one by one, the destructive privileges of the various provinces. But, on the contrary, they committed every sort of violence and injustice. . . . The Catalonians, stirred up to vengeance, sought retribution in chance combats, lost their dread of the Castillian troops by frequent contests with them, and were excited almost to frenzy by their violence and rapine. In the mean time, the states of Catalonia refused to obey the royal decree, and sent two deputies to remonstrate with the king and his minister. These messengers

unfortunately executed their commission in an insolent and menacing tone; and Olivarez, of a haughty and inflexible character, caused them instantly to be arrested. These tidings reached Barcelona at the moment when some fresh outrage, committed by the Castillian soldiers, had excited popular indignation to the highest pitch; and a general insurrection was the immediate consequence. The viceroy was slain upon the spot, and a negotiation was instantly entered into with France in order to procure support in rebellion. The courage of Olivarez did not fail even under this fresh misfortune: all the disposable troops in Spain were instantly directed upon Catalonia; and all the other provinces, but more especially Portugal, were ordered to arm for the suppression of the revolt. Turbulent subjects and interested allies are always sure to take advantage of the moment of difficulty. The Portuguese, hating, with even more bitter animosity than the Catalonians, the yoke of Castille, oppressed by Vasconcellos, who ruled them under the vice-queen, duchess of Mantua, and called upon to aid in suppressing an insurrection to which they looked with pleasure and hope, now instantly threw off the rule of Spain. A conspiracy burst forth, which had been preparing under the knowledge and advice of Richelieu for more than three years; and the duke of Braganza, a prince of no great abilities, was proclaimed king. . . . In the mean time the marquis de los Velez had taken the command of the army sent against the Catalonian rebels; and a willing instrument of the minister's vengeance, he exercised the most barbarous cruelties as he marched on into the refractory province. The town of Tortosa was taken and sacked by his soldiers, and the people subjected to every sort of violence. Fire, massacre, and desolation marked his progress; but, instead of inspiring crouching terror, and trembling self-abandonment, his conduct roused up lion-like revenge. Hurrying on the negotiations with France, the Catalonians accepted any terms which Richelieu chose to offer, declared themselves subject to the French crown, and pronounced the authority of Spain at an end for ever in Catalonia. A small corps of French troops was immediately thrown forward from Roussillon, and advanced to Taragona under the command of D'Espenan, a general who had shown great skill and courage at Salces. The Catalonians, with the usual bravado of their nation, had represented their army as a thousandfold stronger, both in numbers and discipline, than it really was; and the French officers were in consequence lamentably disappointed when they saw the militia which was to support them, and still more disappointed when they beheld that militia in face of an enemy. As a last resource against the large Spanish force under Los Velez, D'Espenan threw himself into Taragona, in opposition to the advice of Besançon, who was employed, on the part of France, in organizing the Catalonians. Here he was almost immediately besieged; and, being destitute both of provisions and ammunition, was soon forced to sign a capitulation, whereby he agreed to evacuate the territory of Spain with all the troops which had entered Catalonia from France. This convention he executed, notwithstanding all remonstrances and petitions on the part of the Catalonians; and, retreating at once from Taragona to the French frontier, he abandoned the field to the enemy. Had Olivarez now seized the favourable moment, . . . it is probable — it is more than probable — that Catalonia would at once have been pacified, and that her dangerous privileges would in part have been sacrificed to the desire and necessity of peace. . . . But the count-duke sought revenge as much as advantage. . . . Continued severity only produced a continuance of resistance: the Catalonians sustained themselves till the French forces returned in greater numbers, and with more experienced commanders: the tide of success turned against the Castillians; and Los Velez was recalled to give place to Leganez. . . . In various engagements . . . the Spanish armies were defeated by the French: the Catalonians themselves became better soldiers under the severe discipline of necessity; and though the Spanish fleet defeated the French off Taragona, and saved that city from the enterprises of La Mothe, the general result of the campaign was decidedly unfavourable to Spain. At the same time, the French were making progress in Roussillon; and in the year 1642 the king himself prepared to invade that small territory, with the evident intention of dissevering it from the Spanish crown. Several minor places having been taken, siege was laid to Perpignan: the people of the country were not at all unwilling to pass under the dominion of France; and another serious misfortune threatened the ministry of Olivarez. At this time was concerted the conspiracy of Cinq Mars [see FRANCE: A. D. 1641–1642] . . . and the count-duke eagerly entered into the views of the French malecontents, and promised them every assistance they demanded. The failure of the conspiracy, the arrest and execution of some of the conspirators, and the fall of Perpignan, came rapidly, one upon the other, showing the fortune of Richelieu still triumphing over all the best laid schemes of his adversaries."—G. P. R. James, *Eminent Foreign Statesmen, v.* 2: *Olivarez.*

A. D. 1644-1646.—The war in Catalonia.—Sieges of Lerida.—In 1644, Philip IV., "under the prudent and sagacious counsels of Don Louis de Haro, was directing his principal efforts to the recovery of Catalonia. . . . Don Philip de Sylva, an officer of experience and determination, was put at the head of the Castilian troops, and immediately advanced to the siege of the strong town of Lerida, the king himself being nominally in command of the army. The French troops in Catalonia were at that time commanded by La Mothe Houdancourt, who no sooner heard of the advance of the Spanish troops towards Lerida than he marched with great rapidity to the relief of that place;" but approached the enemy with so much carelessness that he was attacked by Sylva and totally defeated, with a loss of 3,000 men and 12 guns. He then, for a diversion, laid siege to Tarragona, and lost 3,000 more of his men, without accomplishing the reduction of the place; being forced, in the end, to retreat to Barcelona, while Lerida was surrendered to the Spaniards. "La Mothe having been recalled and imprisoned, . . . the Count de Harcourt was withdrawn from Savoy, and put at the head of fresh forces, for the purpose of repairing the disasters of the former general." Harcourt began operations (April, 1645)

by laying siege to the strong fortress of Rosas, or Roses, which commanded the principal entrance to Catalonia from Roussillon. The fortress surrendered the following month, and "the Count de Harcourt, . . . after capturing some places of minor import, passed the Segre, encountered the army of Cantelmo in the neighbourhood of Llorens, and, gaining a complete victory, made himself master of Balaguer." After these successes, the Count de Harcourt was called away from Catalonia for a time, to act against the insurgents at Barcelona, but returned in 1646 and undertook the siege of Lerida. He was now opposed by the Marquis de Leganez, whom he had successfully encountered in Italy, and whom he was foolishly disposed to regard with contempt. While he pressed his siege in careless security, Leganez surprised him, in a night attack, and drove him in utter rout from his lines. "This signal disaster caused the Count de Harcourt to be recalled; and in order to recover all that had been lost in Catalonia, the Prince de Condé was appointed to command in that province, while a considerable part of the army of Flanders was ordered to proceed towards the frontiers of Spain to serve once more under his command." But Condé, too, was to pay the penalty for despising his enemy. He reopened the siege of Lerida with ostentatious gaiety, marching into the trenches with music of violins, on the 14th of May. In little more than a month he marched out again, without music, abandoning the siege, having lost many men and obtained no sign of success.—G. P. R. James, *Life and Times of Louis XIV.*, *v.* 1, *ch.* 3.

A. D. 1648-1652.—Subjugation of Catalonia.—"During the four years which [in France] had been filled with the troubles of the Fronde, Spain endeavored, and with success, to reconquer the province which had abandoned her. In 1650, Mazarin had recognized the peril of Catalonia, and had endeavored to send assistance in war and money. It was possible, however, to do but little. In 1651 the Spanish besieged Barcelona. After Marchin's desertion they hoped to capture it at once, but it was defended with the courage and constancy of the Catalonian people. La Mothe Houdancourt was again put in command of the province. He had been unsuccessful there when France was strong, and it could hardly have been expected that he could rescue it when France was weak. He succeeded, however, in forcing his way into Barcelona, and defended the city with as much success as could, perhaps, have been anticipated from the scanty means at his command. The inhabitants endured, with constancy, the danger and want caused by the siege, rather than surrender themselves to Spain. Some French ships sailed for the rescue of the place, but they acquitted themselves with little valor. Provisions were sent into the town, but the commander claimed he was not in condition for a conflict with the Spanish fleet, and he retreated. Endeavors were made, both by the French troops and those of the Catalonians, to raise the siege, but without success. In October [1652], after a siege of fifteen months, Barcelona surrendered. Roses was captured soon after. Leucate was betrayed to Spain by its governor for 40,000 crowns. He intended to enlist under Orleans, but learning the king had reëntered Paris, he made his peace, by agreeing to betray no more. The Spanish granted an amnesty to the people of Catalonia. The whole province fell into their hands, and became again a part of the kingdom of Spain. The loss of Catalonia was chiefly due to the turbulence and disloyalty of Condé. Had it not been for the groundless rebellion which he excited in the autumn of 1651, and which absorbed the energies of the French armies during the next year, Catalonia might have been saved for France and have remained a part of that kingdom. . . . It was a national misfortune that Catalonia was lost. This great and important province would have been a valuable accession to France. Its brave and hardy population would have become loyal and industrious Frenchmen, and have added to the wealth and power of that kingdom. For the Catalonians it was still more unfortunate that their lot should thus have been determined. They were not closely related to the people of Aragon or Castile. They were now left to share in the slow decay of the Spanish kingdom, instead of having an opportunity for development in intelligence and prosperity as members of a great and progressive nation."—J. B. Perkins, *France under Mazarin*, *ch.* 15 (*v.* 2).

A. D. 1698-1700.—The question of the Succession.—The Treaties of Partition.—The will of Charles II.— As the 17th century approached its close, the king of Spain, Charles II., was nearing the grave. "His days had been few and evil. He had been unfortunate in all his wars, in every part of his internal administration, and in all his domestic relations. . . . He was childless; and his constitution was so completely shattered that, at little more than thirty years of age, he had given up all hopes of posterity. His mind was even more distempered than his body. . . . His sufferings were aggravated by the thought that his own dissolution might not improbably be followed by the dissolution of his empire. Several princes laid claim to the succession. The King's eldest sister had married Lewis XIV. The Dauphin would, therefore, in the common course of inheritance, have succeeded to the crown. But the Infanta had, at the time of her espousals, solemnly renounced, in her own name, and in that of her posterity, all claim to the succession [see FRANCE: A. D. 1659–1661]. This renunciation had been confirmed in due form by the Cortes. A younger sister of the King had been the first wife of Leopold, Emperor of Germany. She too had at her marriage renounced her claims to the Spanish crown, but the Cortes had not sanctioned the renunciation, and it was therefore considered as invalid by the Spanish jurists. The fruit of this marriage was a daughter, who had espoused the Elector of Bavaria. The Electoral Prince of Bavaria inherited her claim to the throne of Spain. The Emperor Leopold was son of a daughter of Philip III., and was therefore first cousin to Charles. No renunciation whatever had been exacted from his mother at the time of her marriage. The question was certainly very complicated. That claim which, according to the ordinary rules of inheritance, was the strongest, had been barred by a contract executed in the most binding form. The claim of the Electoral Prince of Bavaria was weaker. But so also was the contract which bound him not to prosecute his claim. The only party against whom no instrument of renunciation could be produced was the party who, in respect of blood, had the weakest claim of all. As it was clear that great alarm would be excited throughout Europe if either the Emperor or the Dauphin should become King of Spain, each of those Princes offered to waive his pretensions in favour of his second son; the Emperor in favour of the Archduke Charles, the Dauphin in favour of Philip, Duke of Anjou. Soon after the Peace of Ryswick, William III. and Lewis XIV. determined to settle the question of the succession without consulting either Charles or the Emperor. France, England, and Holland, became parties to a treaty [called the First Partition Treaty] by which it was stipulated that the Electoral Prince of Bavaria should succeed to Spain, the Indies, and the Netherlands. The Imperial family were to be bought off with the Milanese, and the Dauphin was to have the Two Sicilies. The great object of the King of Spain and of all his counsellors was to avert the dismemberment of the monarchy. In the hope of attaining this end, Charles determined to name a successor. A will was accordingly framed by which the crown was bequeathed to the Bavarian Prince. Unhappily, this will had scarcely been signed when the Prince died. The question was again unsettled, and presented greater difficulties than before. A new Treaty of Partition was concluded between France, England, and Holland. It was agreed that Spain, the Indies, and the Netherlands, should descend to the Archduke Charles. In return for this great concession made by the Bourbons to a rival house, it was agreed that France should have the Milanese, or an equivalent in a more commodious situation. The equivalent in view was the province of Lorraine. Arbuthnot, some years later, ridiculed the Partition Treaty with exquisite humour and ingenuity. Everybody must remember his description of the paroxysm of rage into which poor old Lord Strutt fell, on hearing that his runaway servant, Nick Frog, his clothier, John Bull, and his old enemy, Lewis Baboon, had come with quadrants, poles, and inkhorns, to survey his estate, and to draw his will for him. . . . When the intelligence of the second Partition Treaty arrived at Madrid, it roused to momentary energy the languishing ruler of a languishing state. The Spanish ambassador at the court of London was directed to remonstrate with the government of William; and his remonstrances were so insolent that he was commanded to leave England. Charles retaliated by dismissing the English and Dutch ambassadors. The French King, though the chief author of the Partition Treaty, succeeded in turning the whole wrath of Charles and of the Spanish people from himself, and in directing it against the two maritime powers. Those powers had now no agent at Madrid. Their perfidious ally was at liberty to carry on his intrigues unchecked; and he fully availed himself of this advantage." He availed himself of the advantage so successfully, in fact, that when the Spanish king died, November 3, 1700, he was found to have left a will, bequeathing the whole Spanish monarchy to Philip, Duke of Anjou, second son of the Dauphin of France. "Lewis acted as the English ministers might have guessed that he would act. With scarcely the show of hesitation, he broke through all the obligations of the Partition Treaty, and accepted for his grandson the splendid legacy of Charles. The new sovereign hastened to take possession of his dominions."—Lord Macaulay, *Mahon's War of the Succession* (*Essays*).

A. D. 1700.—Accession of Philip V.

A. D. 1701-1702.—The Bourbon succession, and the European League against it.—"Louis XIV. having . . . resolved to accede to the will, Philip of Anjou was proclaimed King by the Spaniards, and made his solemn entry into Madrid on the 14th of April 1701. Most of the European powers, such as the States of Italy, Sweden, England, Holland, and the kingdoms of the North, acknowledged Philip V.; the King of

Portugal and the Duke of Savoy even concluded treaties of alliance with him. Moreover, the situation of political affairs in Germany, Hungary, and the North was such that it would have been easy for Louis XIV., with prudent management, to preserve the Spanish crown on the head of his grandson; but he seemed, as if on purpose, to do everything to raise all Europe against him. It was alleged that he aimed at the chimerical project of universal monarchy, and the reunion of France with Spain. Instead of trying to do away this supposition, he gave it additional force, by issuing letters-patent in favour of Philip, at the moment when he was departing for Spain, to the effect of preserving his rights to the throne of France. The Dutch dreaded nothing so much as to see the French making encroachments on the Spanish Netherlands, which they regarded as their natural barrier against France; the preservation of which appeared to be equally interesting to England. It would have been prudent in Louis XIV. to give these maritime powers some security on this point, who, since the elevation of William, Prince of Orange, to the crown of Great Britain, held as it were in their hands the balance of Europe. Without being swayed by this consideration, he obtained authority from the Council of Madrid to introduce a French army into the Spanish Netherlands; and on this occasion the Dutch troops, who were quartered in various places of the Netherlands, according to a stipulation with the late King of Spain, were disarmed. This circumstance became a powerful motive for King William to rouse the States-General against France. He found some difficulty, however, in drawing over the British Parliament to his views, as a great majority in that House were averse to mingle in the quarrels of the Continent; but the death of James II. altered the minds and inclinations of the English. Louis XIV. having formally acknowledged the son of that prince as King of Great Britain, the English Parliament had no longer any hesitation in joining the Dutch and the other enemies of France. A new and powerful league [the Second Grand Alliance] was formed against Louis. The Emperor, England, the United Provinces, the Empire, the Kings of Portugal and Prussia, and the Duke of Savoy, all joined it in succession. The allies engaged to restore to Austria the Spanish Netherlands, the duchy of Milan, the kingdom of the Two Sicilies, with the ports of Tuscany; and never to permit the union of France with Spain."—C. W. Koch, *The Revolutions of Europe, period 7.*

A. D. 1702.—The War of the Succession: Cadiz defended.—The treasure fleet lost in Vigo Bay.—The first approach to Spain of the War of the Succession—already raging for months in Northern Italy and the Spanish Netherlands—was in the form of an expedition against Cadiz, undertaken in the autumn of 1702 by the English and Dutch. "King William was the first to plan this expedition against Cadiz and after his decease the project was resumed. But had King William lived he would certainly not have selected as chief the Duke of Ormond, a princely nobleman, endowed with many amiable qualities, but destitute of the skill and the energy which a great enterprise requires. Under him Sir Henry Bellasys commanded the English and General Spaar a contingent of Dutch troops, amounting together to 14,000 men. Admiral Sir George Rooke had the direction of the fleet. Their proceedings have been related at full length in another history [Lord Mahon's (Earl Stanhope's) 'War of the Succession in Spain']—how the troops were set on shore near Cadiz in the first days of September—how even before they landed angry dissensions had sprung up between the Dutch and the English, the landsmen and the seamen—and how these dissensions which Ormond wanted the energy to control proved fatal to the enterprise. No discipline was kept, no spirit was displayed. Week after week was lost. . . . Finally at the close of the month it was discovered that nothing could be done, and a council of war decided that the troops should reembark. . . . On their return, and off the coast of Portugal, an opportunity arose to recover in some part their lost fame. The Spanish galleons from America, laden with treasure and making their yearly voyage at this time, were bound by their laws of trade to unload at Cadiz, but in apprehension of the English fleet they had put into Vigo Bay. There Ormond determined to pursue them. On the 22nd of October he neared that narrow inlet which winds amidst the high Gallician mountains. The Spaniards, assisted by some French frigates, which were the escort of the galleons, had expected an attack and made the best preparations in their power. They durst not disembark the treasure without an express order from Madrid—and what order from Madrid ever yet came in due time?—but they had called the neighbouring peasantry to arms; they had manned their forts; they had anchored their ships in line within the harbour; and they had drawn a heavy boom across its mouth. None of these means availed them. The English seamen broke through the boom; Ormond at the head of 2,000 soldiers scaled the forts; and the ships were all either taken or destroyed. The greater part of the treasure was thrown overboard by direction of the French and Spanish chiefs; but there remained enough to yield a large amount of booty to the victors."—Earl Stanhope, *Hist. of Eng.: Reign of Queen Anne, ch.* 2.

Also in: Col. A. Parnell, *War of the Succession in Spain, ch.* 3-4.—For the campaigns of the War of the Succession in other quarters see Italy: A. D. 1701-1713; Netherlands: A. D. 1702-1704, and after; Germany: A. D. 1702, and after.

A. D. 1703-1704.—The War of the Succession: Charles III. claims the kingdom.—The English take Gibraltar.—"The Admiral of Castile, alienated from the cause of Philip V. by having been dismissed from his office of Master of the Horse, had retired into Portugal; and he succeeded in persuading King Pedro II. to accede to the Grand Alliance, who was enticed by the promise of the American provinces between the Rio de la Plata and Brazil, as well as a part of Estremadura and Galicia (May 6th). Pedro also entered into a perpetual defensive league with Great Britain and the States-General. In the following December, Paul Methuen, the English minister at Lisbon, concluded the celebrated commercial treaty between England and

Portugal named after himself [see PORTUGAL: A. D. 1703]. It is the most laconic treaty on record, containing only two Articles, to the effect that Portugal was to admit British cloths, and England to admit Portuguese wines, at one-third less duty than those of France. Don Pedro's accession to the Grand Alliance entirely changed the plans of the allies. Instead of confining themselves to the procuring of a reasonable indemnity for the Emperor, they now resolved to drive Philip V. from the throne of Spain, and to place an Austrian Archduke upon it in his stead. The Emperor and his eldest son Joseph formally renounced their claims to the throne of Spain in favour of the archduke Charles, Leopold's second son, September 12th [1703]; and the Archduke was proclaimed King of Spain, with the title of Charles III. The new King was to proceed into Portugal, and, with the assistance of Don Pedro, endeavour to obtain possession of Spain. Charles accordingly proceeded to Holland, and embarked for England in January 1704; whence, after paying a visit to Queen Anne at Windsor, he finally set sail for Lisbon, February 17th. . . . In March 1704, the Pretender, Charles III., together with an English and Dutch army of 12,000 men, landed in Portugal, with the intention of entering Spain on that side; but so far were they from accomplishing this plan that the Spaniards, on the contrary, under the Duke of Berwick, penetrated into Portugal, and even threatened Lisbon, but were driven back by the Marquis das Minas. An English fleet under Admiral Rooke, with troops under the Prince of Darmstadt, made an ineffectual attempt on Barcelona; but were compensated for their failure by the capture of Gibraltar on their return. The importance of this fortress, the key of the Mediterranean, was not then sufficiently esteemed, and its garrison had been neglected by the Spanish Government. A party of English sailors, taking advantage of a Saint's day, on which the eastern portion of the fortress had been left unguarded, scaled the almost inaccessible precipice, whilst at the same time another party stormed the South Mole Head. The capture of this important fortress was the work of a few hours (August 4th). Darmstadt would have claimed the place for King Charles III., but Rooke took possession of it in the name of the Queen of England. . . . The Spaniards, sensible of the importance of Gibraltar, speedily made an effort to recover that fortress, and as early as October 1704, it was invested by the Marquis of Villadarias with an army of 8,000 men. The French Court afterwards sent Marshal Tessé to supersede Villadarias, and the siege continued till April 1705; but the brave defence of the Prince of Darmstadt, and the defeat of the French blockading squadron under Pointis by Admiral Leake, finally compelled the raising of the siege."—T. H. Dyer, *Hist. of Modern Europe, bk.* 5, *ch.* 6 (*v.* 3).

A. D. 1704.—The War of the Succession: Blenheim. See GERMANY: A. D. 1704.

A. D. 1705.—The War of the Succession: The capture of Barcelona.—"As if to exhibit, upon a different theatre of the same great warfare, the most remarkable contrast to the patience, the caution, and the foresight of Marlborough, . . . Charles Mordaunt, earl of Peterborough, took the command of an expedition to Spain. Macaulay calls Peterborough 'the most extraordinary character of that age, the king of Sweden himself not excepted, . . . a polite, learned and amorous Charles XII.' He sailed from Portsmouth in June, 1705, having the command of 5,000 men; unlimited authority over the land forces, and a divided command with sir Cloudesley Shovel at sea. At Lisbon, Peterborough was reinforced, and he here took on board the arch-duke Charles, and a numerous suite. At Gibraltar he received two veteran battalions, in exchange for the same number of recruits which he had brought from England. The prince of Darmstadt also here joined Peterborough. The prince and the arch-duke desired to besiege Barcelona. Peterborough opposed the scheme of attempting, with 7,000 men, the reduction of a place which required 30,000 men for a regular siege. With the squadron under sir Cloudesley Shovel, the fleet sailed from Gibraltar. A landing was effected near Valencia; and here the people were found favourable to the cause of the Austrian prince, who was proclaimed, upon the surrender of the castle of Denia, as Charles III., king of Spain and the Indies. Peterborough, encouraged by this reception, conceived the enterprise of dashing upon the capital, whilst all the Spanish forces were on the frontiers of Portugal, or in Catalonia; and king Philip was at Madrid with few troops. Such an exploit had every chance of success, but Peterborough was overruled by a council of war. The troops were landed before Barcelona on the 27th of August. In three weeks there was nothing but dissensions amongst the great men of this expedition. The prince of Darmstadt and the earl of Peterborough had come to an open rupture. The Dutch officers said their troops should not join in an enterprise so manifestly impossible of success for a small force. Peterborough conceived a plan of attack totally opposed to all the routine modes of warfare. The citadel of Montjouich, built on the summit of a ridge of hills skirting the sea, commanded the town. Peterborough gave notice that he should raise the siege; sent his heavy artillery on board the ships; and made every preparation for embarking the troops. With 1,200 foot soldiers, and 200 horse, he marched out of the camp on the evening of the 13th of September, accompanied by the prince of Darmstadt, whom he had invited to join him. They marched all night by the side of the mountains; and before daybreak were under the hill of Montjouich, and close to the outer works. Peterborough told his officers that when they were discovered at daylight, the enemy would descend into the outer ditch to repel them, and that then was the time to receive their fire, leap in upon them, drive them into the outer works, and gain the fortress by following them close. The scheme succeeded, and the English were soon masters of the bastion. . . . The citadel held out for several days, but was finally reduced by a bombardment from the hills, the cannon having been relanded from the ships. The reduction of Montjouich by this extraordinary act of daring, was very soon followed by the surrender of Barcelona. . . . The possession of Barcelona, in which king Charles III. was proclaimed with great solemnity, was followed by the adhesion to his cause of the chief towns

of Catalonia. Peterborough was for following up his wonderful success by other daring operations. The German ministers and the Dutch officers opposed all his projects." He was able, notwithstanding, to raise the siege of San Mateo and to save Valencia from a threatened siege. "It was soon found that king Charles was incompetent to follow up the successes which Peterborough had accomplished for him."—C. Knight, *Crown Hist. of Eng., ch.* 38.—The above is substantially, in brief, the account of Peterborough's campaigns given by Mahon, Macaulay, and most of the later historians of the War of the Succession, who drew the narrative largely from a little book published in 1728, called the "Military Memoirs of Captain George Carleton." The story has been recently told, however, in a very different way and to a very different effect, by Colonel Arthur Parnell, who declines to accept the Carleton Memoirs as authentic history. Those Memoirs have been judged by some critics, indeed, to be a pure work of fiction and attributed to De Foe. They are included, in fact, in several editions of De Foe's works. Colonel Parnell, who seems to have investigated the matter thoroughly, recognizes Captain Carleton as a real personality, and concludes that he may have furnished some kind of a note-book or diary that was the substratum of these alleged Memoirs; but that somebody (he suspects Dean Swift), in the interest of Peterborough, built up on that groundwork a fabric of fiction which has most wrongfully become accepted history. According to Colonel Parnell, it was not Peterborough, but Prince George of Hesse Darmstadt (killed in the assault on Montjouich) and De Ruvigny, Earl of Galway, who were entitled to the credit of the successes for which Peterborough has been laurelled. "In order to extol a contemptible impostor, the memory of this great Huguenot general [Ruvigny] has been aspersed by Lord Macaulay and most English writers of the present century."—Col. A. Parnell, *The War of the Succession in Spain, pref.; ch.* 12–18; *and app. C.*

Also in: E. Warburton, *Memoir of Peterborough, ch.* 7–11 (*v.* 1).—F. S. Russell, *The Earl of Peterborough, v.* 1, *ch.* 7–9.

A. D. 1706.—The War of the Succession: Rapid changing of kings and courts at Madrid.—"The Courts of Madrid and Versailles, exasperated and alarmed by the fall of Barcelona, and by the revolt of the surrounding country, determined to make a great effort. A large army, nominally commanded by Philip, but really under the orders of Marshal Tessé, entered Catalonia. A fleet under the Count of Toulouse, one of the natural children of Lewis XIV., appeared before the port of Barcelona. The city was attacked at once by sea and land. The person of the Archduke was in considerable danger. Peterborough, at the head of about 3,000 men, marched with great rapidity from Valencia. To give battle, with so small a force, to a great regular army under the conduct of a Marshal of France, would have been madness. . . . His commission from the British government gave him supreme power, not only over the army, but, whenever he should be actually on board, over the navy also. He put out to sea at night in an open boat, without communicating his design to any person. He was picked up, several leagues from the shore, by one of the ships of the English squadron. As soon as he was on board, he announced himself as first in command, and sent a pinnace with his orders to the Admiral. Had these orders been given a few hours earlier, it is probable that the whole French fleet would have been taken. As it was, the Count of Toulouse put out to sea. The port was open. The town was relieved. On the following night the enemy raised the siege and retreated to Roussillon. Peterborough returned to Valencia, a place which he preferred to every other in Spain; and Philip, who had been some weeks absent from his wife, could endure the misery of separation no longer, and flew to rejoin her at Madrid. At Madrid, however, it was impossible for him or for her to remain. The splendid success which Peterborough had obtained on the eastern coast of the Peninsula had inspired the sluggish Galway with emulation. He advanced into the heart of Spain. Berwick retreated. Alcantara, Ciuadad Rodrigo, and Salamanca fell, and the conquerors marched towards the capital. Philip was earnestly pressed by his advisers to remove the seat of government to Burgos. . . . In the mean time the invaders had entered Madrid in triumph, and had proclaimed the Archduke in the streets of the imperial city. Arragon, ever jealous of the Castilian ascendency, followed the example of Catalonia. Saragossa revolted without seeing an enemy. The governor whom Philip had set over Carthagena betrayed his trust, and surrendered to the Allies the best arsenal and the last ships which Spain possessed. . . . It seemed that the struggle had terminated in favour of the Archduke, and that nothing remained for Philip but a prompt flight into the dominions of his grandfather. So judged those who were ignorant of the character and habits of the Spanish people. There is no country in Europe which it is so easy to overrun as Spain; there is no country in Europe which it is more difficult to conquer. Nothing can be more contemptible than the regular military resistance which Spain offers to an invader; nothing more formidable than the energy which she puts forth when her regular military resistance has been beaten down. Her armies have long borne too much resemblance to mobs; but her mobs have had, in an unusual degree, the spirit of armies. . . . Castile, Leon, Andalusia, Estremadura, rose at once; every peasant procured a firelock or a pike; the Allies were masters only of the ground on which they trod. No soldier could wander a hundred yards from the main body of the invading army without imminent risk of being poinarded; the country through which the conquerors had passed to Madrid, and which, as they thought, they had subdued, was all in arms behind them. Their communications with Portugal were cut off. In the mean time, money began, for the first time, to flow rapidly into the treasury of the fugitive king. . . . While the Castilians were everywhere arming in the cause of Philip, the Allies were serving that cause as effectually by their mismanagement. Galway staid at Madrid, where his soldiers indulged in such boundless licentiousness that one half of them were in the hospitals. Charles remained dawdling in Catalonia. Peterborough had taken Requena, and wished to march from Valencia towards Madrid, and to effect a junction with Galway; but the Archduke refused his consent to the plan. The indignant general remained accordingly in his favourite city, on the beauti-

ful shores of the Mediterranean, reading Don Quixote, giving balls and suppers, trying in vain to get some good sport out of the Valencian bulls, and making love, not in vain, to the Valencian women. At length the Archduke advanced into Castile, and ordered Peterborough to join him. But it was too late. Berwick had already compelled Galway to evacuate Madrid; and, when the whole force of the Allies was collected at Quadalaxara, it was found to be decidedly inferior in numbers to that of the enemy. Peterborough formed a plan for regaining possession of the capital. His plan was rejected by Charles. The patience of the sensitive and vainglorious hero was worn out. He had none of that serenity of temper which enabled Marlborough to act in perfect harmony with Eugene, and to endure the vexatious interference of the Dutch deputies. He demanded permission to leave the army, Permission was readily granted; and he set out for Italy. . . . From that moment to the end of the campaign, the tide of fortune ran strong against the Austrian cause. Berwick had placed his army between the Allies and the frontiers of Portugal. They retreated on Valencia, and arrived in that province, leaving about 10,000 prisoners in the hands of the enemy."—Lord Macaulay, *Mahon's War of the Succession* (*Essays*).—In the Netherlands the Allies won the important victory of Ramillies, and in Italy, Prince Eugene inflicted a sore defeat on the French and rescued Turin.—See NETHERLANDS: A. D. 1706–1707; and ITALY: A. D. 1701–1713.

A. D. 1707.—The War of the Succession: The fortunes of the Bourbons retrieved at Almanza.—"The enemy [the Allies] began to move again in February. After some weeks of manœuvring on the confines of the kingdom of Valencia and of New Castile, April 25, Galway and Las Minas, wishing to anticipate the arrival of a reinforcement expected from France, attacked Berwick at Almanza. Singularly enough, the English were commanded by a French refugee (Ruvigni, Earl of Galway), and the French by a royal bastard of England [the Duke of Berwick, natural son of James II.]. The enemy numbered, it is said, 26,000 foot and 7,000 horse; the Franco-Castilians were somewhat inferior in infantry, somewhat superior in cavalry and artillery." The battle, decided by the cavalry, was disastrous to the Allies. "The English, Dutch and Portuguese infantry were cut to pieces: the Portuguese foot showed a courage less fortunate, but not less intrepid, than the Spanish cavalry. Another corps had fought with still greater fury,—the French refugees, commanded by Jean Cavalier, the renowned Camisard chieftain. They had engaged a French regiment, and the two corps had almost destroyed each other. Six battalions were surrounded and taken in a body. Thirteen other battalions, five English, five Dutch, and three Portuguese, retired, at evening, to a wooded hill; seeing themselves cut off from the mountains of Valencia, they surrendered themselves prisoners the next morning. Hochstadt [Blenheim] was fully avenged. Five thousand dead, nearly 10,000 prisoners, 24 cannon, 120 flags or standards, were purchased on the part of the conquerors by the loss of only about 2,000 men. Many Frenchmen, taken at Hochstadt or at Ramillies, and enrolled by force in the ranks of the enemies, were delivered by the victory. The Duke of Orleans reached the army the next day. . . . He marched with Berwick on Valencia, which surrendered, May 8, without striking a blow. The generals of the enemies, both wounded, retired with the wrecks of their armies towards the mouths of the Ebro. The whole kingdom of Valencia submitted, with the exception of three or four places. Berwick followed the enemy towards the mouth of the Ebro, whilst Orleans returned to meet a French corps that was coming by the way of Navarre, and with this corps entered Aragon. Nearly all Aragon yielded without resistance. Berwick joined Orleans by ascending the Ebro; they moved together on the Segre and began the blockade of Lerida, the bulwark of Catalonia." Lerida was taken by storm on the 12th of October, and "pillaged with immense booty. . . . The castle of Lerida surrendered, November 11. A great part of the Catalan mountaineers laid down their arms. . . . Fortune had favored the Franco-Castilians on the Portuguese frontier as in the States of Aragon; Ciudad-Rodrigo had been taken by assault, October 4, with the loss of more than 3,000 men on the side of the enemy. The news of Almanza had everywhere reanimated the hearts of the French armies."—H. Martin, *Hist. of France: Age of Louis XIV.* (*tr. by M. L. Booth*), *v.* 2, *ch.* 5.

A. D. 1707-1710.—The War of the Succession: Bourbon reverses and final triumph.—"In less than a month after the victory of Almanza, the Bourbon troops had recovered all Arragon, with Valencia and Murcia, excepting the ports of Denia and Alicant; but the war still continued in Catalonia, where General Stanhope now filled the double office of ambassador to Charles and general of the English forces, and prince Staremberg was sent by the emperor Joseph to take the command of the Austrian troops. The Spanish government was reduced to still greater pecuniary distress than it had suffered before, by the success of the English squadron off Carthagena, under the command of Sir Charles Wager, which took three of the great galleons and dispersed fourteen, which were expected to furnish an unusual supply of the precious metals from America. After a short siege of Port Mahon, General Stanhope took possession of Minorca and Majorca [A. D. 1708]; the count of Cifuentes gained Sardinia; and all the efforts, spirit, and talents of the duke of Orleans were insufficient to make the slightest impression in Catalonia. He consequently complained, in his letters to Versailles, that his operations were thwarted or retarded by the intrigues of the Princess Orsini and the ambassador Amelot. He was accused in return, and that not without reason, of forming designs on the crown of Spain, and corresponding with the enemies of Philip on the subject. The fortunes of France and Spain still continued to decline, and Louis felt that peace was the only measure which could stop the progress of that ruin which menaced the house of Bourbon. Conferences were accordingly opened at the Hague, and Louis pretended that he was willing to give up the interest of Philip; at the same time his

grandson himself protested that he would never quit Spain, or yield his title to its crown. . . . The disastrous campaign of 1710 rendered Louis more desirous than ever of obtaining peace, and though his professions of abandoning his grandson were insincere, he certainly would not have scrupled to sacrifice the Spanish Netherlands and the American commerce to Holland, as the price of an advantageous peace to France. Meantime the Austrians had gained the victories of Almenara and Zaragoza, and had once more driven the Spanish court from Madrid. This time it fled to Valladolid, and the king and queen talked of taking refuge in America, and re-establishing the empire of Mexico or Peru, rather than abandon their throne. But the Castilians once more roused themselves to defend the king; the duke of Vendome's arrival supplied their greatest want, that of a skilful general; and the imprudence of the allies facilitated the recovery of the capital. The disasters of the allies began with their retreat; Staremburg, after a doubtful though bloody battle [Villa Viciosa, December 10, 1710], at the end of which he was victor, was yet obliged to retire with the disadvantages of defeat; and Stanhope, with a small body of English, after a desperate resistance [at Brihuega, December 9, 1710], was taken prisoner."—M. Callcott, *Short Hist. of Spain, ch.* 22 (*v.* 2).—"As the result of the actions at Brihuega and Villa Viciosa and the subsequent retreat, the Austrians lost 3,600 killed or wounded, and 3,936 prisoners, or a total of 7,536 men; whilst the Bourbon casualties were 6,700 placed hors-de-combat, and 100 captured, or in all 6,800 men. These operations constituted a decisive victory for Vendôme, who thus, in less than four months after the battle of Saragossa, had re-established King Philip and the Bourbon cause."—Col. A. Parnell, *The War of the Succession in Spain, ch.* 27–34.

A. D. 1711.—The Austrian claimant of the throne becomes Emperor. See Austria: A. D. 1711.

A. D. 1713-1714.—The betrayal of the Catalans.—"Alone among the Spaniards the Catalans had real reason to regret the peace. They had clung to the cause of Charles with a desperate fidelity, and the Peace of Utrecht rang the death-knell of provincial liberties to which they were passionately attached. From the beginning of 1705 they had been the steady and faithful allies of England; they had again and again done eminent service in her cause; they had again and again received from her ministers and generals the most solemn assurances that they would never be abandoned. When England first opened a separate negotiation for peace she might easily have secured the Catalonian liberties by making their recognition an indispensable preliminary of peace; but, instead of this, the English ministers began by recognising the title of Philip, and contented themselves with a simple prayer that a general amnesty might be granted. When the convention was signed for the evacuation of Catalonia by the Imperial troops, the question of the provincial liberties was referred to the definite peace, the Queen and the French King promising at that time to interpose their good offices to secure them. The Emperor, who was bound to the Catalans by the strongest ties of gratitude and honour, could have easily obtained a guarantee of their fueros at the price of an acknowledgment of the title of Philip; but he was too proud and too selfish for such a sacrifice. The English, it is true, repeatedly urged the Spanish King to guarantee these privileges, . . . but these were mere representations, supported by no action, and were therefore peremptorily refused. The English peace with Spain contained a clause granting the Catalans a general armistice, and also a promise that they should be placed in the same position as the Castilians, which gave them the right of holding employments and carrying on a direct trade with the West Indies, but it made no mention of their provincial privileges. The Peace of Rastadt was equally silent, for the dignity of the Emperor would not suffer him to enter into any negotiations with Philip. The unhappy people, abandoned by those whom they had so faithfully served, refused to accept the position offered them by treaty, and, much to the indignation of the English Government, they still continued in arms, struggling with a desperate courage against overwhelming odds. The King of Spain then called upon the Queen, as a guarantee of the treaty of evacuation, 'to order a squadron of her ships to reduce his subjects to their obedience, and thereby complete the tranquillity of Spain and of the Mediterranean commerce.' A fleet was actually despatched, which would probably have been employed against Barcelona, but for an urgent address of the House of Lords, and the whole moral weight of England was thrown into the scale against the insurgents. The conduct of the French was more decided. Though the French King had engaged himself with the Queen by the treaty of evacuation to use his good offices in the most effectual manner in favour of the Catalan liberties, he now sent an army to hasten the capture of Barcelona. The blockade of that noble city lasted for more than a year. The insurgents hung up over the high altar the Queen's solemn declaration to protect them. They continued the hopeless struggle till 14,000 bombs had been thrown into the city; till a great part of it had been reduced to ashes; till seven breaches had been made; till 10,000 of the besieging army had been killed or wounded; and till famine had been added to the horrors of war. At last, on September 11, 1714, Barcelona was taken by storm. A frightful massacre took place in the streets. Many of the inhabitants were afterwards imprisoned or transported, and the old privileges of Catalonia were finally abolished. Such was the last scene of this disastrous war."—W. E. H. Lecky, *Hist. of Eng., 18th century, ch.* 1 (*v.* 1).

A. D. 1713-1725.—Continued war with the Emperor.—The Triple Alliance.—The Quadruple Alliance.—The Peace of Vienna.—The Alliance of Hanover.—"The treaty of Utrecht, although it had tranquilized a great part of Europe, was nevertheless defective, in as far as it had not reconciled the Emperor and the King of Spain, the two principal claimants to the Spanish succession. The Emperor Charles VI. did not recognize Philip V. in his quality of

King of Spain; and Philip, in his turn [instigated by his queen, Elizabeth Farnese—see ITALY: A. D. 1715–1735] refused to acquiesce in those partitions of the Spanish monarchy which the treaty of Utrecht had stipulated in favour of the Emperor. To defeat the projects and secret intrigues of the Spanish minister [Cardinal Alberoni], the Duke of Orleans [Regent of France], thought of courting an alliance with England, as being the power most particularly interested in maintaining the treaty of Utrecht, the fundamental articles of which had been dictated by herself. That alliance, into which the United Provinces also entered, was concluded at the Hague (January 4th, 1717). . . . Cardinal Alberoni, without being in the least disconcerted by the Triple Alliance, persisted in his design of recommencing the war. No sooner had he recruited the Spanish forces, and equipped an expedition, than he attacked Sardinia [1717], which he took from the Emperor. This conquest was followed by that of Sicily, which the Spaniards took from the Duke of Savoy (1718). France and England, indignant at the infraction of a treaty which they regarded as their own work, immediately concluded with the Emperor, at London (August 2nd, 1718) the famous Quadruple Alliance, which contained the plan of a treaty of peace, to be made between the Emperor, the King of Spain, and the Duke of Savoy. The allied powers engaged to obtain the consent of the parties interested in this proposal, and, in case of refusal, to compel them by force of arms. The Emperor was to renounce his right to the Spanish crown, and to acknowledge Philip V. as the legitimate King of Spain, in consideration of that prince renouncing the provinces of Italy and the Netherlands, which the treaty of Utrecht and the quadruple alliance adjudged to the Emperor. The Duke of Savoy was to cede Sicily to Austria, receiving Sardinia in exchange, which the King of Spain was to disclaim. The right of reversion to the crown of Spain was transferred from Sicily to Sardinia. That treaty likewise granted to Don Carlos, eldest son of Philip V., by his second marriage, the eventual reversion and investiture of the duchies of Parma and Placentia, as well as the grand duchy of Tuscany, on condition of holding them as fiefs-male of the Emperor and the Empire after the decease of the last male issue of the families of Farnese and Medici, who were then in possession. . . . The Duke of Savoy did not hesitate to subscribe the conditions of the quadruple alliance; but it was otherwise with the King of Spain, who persisted in his refusal; when France and England declared war against him. The French invaded the provinces of Guipuscoa and Catalonia [under Berwick, A. D. 1719], while the English seized Gallicia and the port of Vigo. These vigorous proceedings shook the resolutions of the King of Spain. He signed the quadruple alliance, and banished the Cardinal Alberoni from his court, the adviser of those measures of which the allies complained. The Spanish troops then evacuated Sicily and Sardinia, when the Emperor took possession of the former and Victor Amadeus, Duke of Savoy, of the latter. The war to all appearance was at an end." But fresh difficulties arose, one following another. The reversion of Tuscany, Parma, and Placentia, promised to the Infant of Spain, was stoutly opposed in Italy. The Emperor provoked commercial jealousies in England and Holland by chartering a Company of Ostend (1722) with exclusive privileges of trading to the East and West Indies and the coasts of Africa. An attempted congress at Cambrai was long retarded and finally broken up. Meantime the French court gave mortal offense to the King of Spain by sending home his daughter, who had been the intended bride of the young King Louis XV., and marrying the latter to a Polish princess. The final result was to draw the Emperor and the King of Spain—the two original enemies in the embroilment—together, and a treaty between them was concluded at Vienna, April 30, 1725. "This treaty renewed the renunciation of Philip V. to the provinces of Italy and the Netherlands, as well as that of the Emperor to Spain and the Indies. The eventual investiture of the duchies of Parma and Placentia, and that of the grand duchy of Tuscany, were also confirmed. The only new clause contained in the treaty was that by which the King of Spain undertook to guarantee the famous Pragmatic Sanction of Charles VI., which secured to the daughter of that prince the succession of all his estates. It was chiefly on this account that Philip V. became reconciled to the court of Vienna. The peace of Vienna was accompanied by a defensive alliance between the Emperor and the King of Spain." The terms of the alliance were such as to alarm England for the security of her hold on Gibraltar and Minorca, and Holland for her commerce, besides giving uneasiness to France. By the action of the latter, a league was set on foot "capable of counteracting that of Vienna, which was concluded at Herrenhausen, near Hanover, (September 3, 1725) and is known by the name of the Alliance of Hanover. All Europe was divided between these two alliances."—C. W. Koch, *The Revolutions of Europe, period* 8.

A. D. 1726-1731.—Fresh quarrels with England.—Siege of Gibraltar.—Treaty of Seville.—Second Treaty of Vienna.—Acquisition of the Italian Duchies.—"All Europe became divided between the alliances of Vienna and Hanover; and though both sides pretended that these treaties were only defensive, yet each made extensive preparations for war. George I. entered into a treaty with the Landgrave of Hesse Cassel for the supply of 12,000 men; manifests were published, ambassadors withdrawn, armies put on foot; the sea was covered with English fleets; an English squadron under Admiral Hosier annoyed the trade of Spain; and in Feb. 1727, the Spaniards laid siege to Gibraltar, and seized at Vera Cruz a richly laden merchant vessel belonging to the English South Sea Company. But all these vast preparations led to no results of importance. Of all the European Powers, Spain alone had any real desire for war. . . . The pre-

liminaries of a general pacification were signed at Paris, May 31st 1727, by the ministers of the Emperor, France, Great Britain, and Holland, and a Congress was appointed to assemble at Aix-la-Chapelle to arrange a definitive peace. But Spain still held aloof and sought every opportunity to temporise. The hopes of Philip being again awakened by the death of George I. in July 1727, he renewed his intrigues with the Jacobites, and instigated the Pretender to proceed to a port in the Low Countries, and to seize an opportunity to pass over into England. But these unfounded expectations were soon dispelled by the quiet accession of George II. to the throne and policy of his father. . . . The Spanish Queen [Elizabeth Farnese], however, still held out; till, alarmed by the dangerous state of Philip's health, whose death might frustrate her favourite scheme of obtaining the Italian duchies, and leave her a mere cypher without any political influence, she induced her husband to accept the preliminaries by the Act of the Pardo, March 6th 1728. A congress was now opened at Soissons, to which place it had been transferred for the convenience of Fleury [French minister], who was bishop of that diocese. But though little remained to be arranged except the satisfaction of Spain in the matter of the Italian duchies, the negociations were tedious and protracted." In the end they "became a mere farce, and the various plenipotentiaries gradually withdrew from the Congress. Meanwhile the birth of a Dauphin (Sept. 4th 1729) having dissipated the hopes of Philip V. and his Queen as to the French succession, Elizabeth devoted herself all the more warmly to the prosecution of her Italian schemes; and finding all her efforts to separate France and England unavailing, she at length determined to accept what they offered. . . . She persuaded Philip to enter into a separate treaty with France and England, which was concluded at Seville, Nov. 9th 1729. England and Spain arranged their commercial and other differences; the succession of Don Carlos to the Italian duchies was guaranteed; and it was agreed that Leghorn, Porto Ferrajo, Parma, and Piacenza should be garrisoned by 6,000 Spaniards, who, however, were not to interfere with the civil government. Nothing more was said about Gibraltar. Philip, indeed, seemed now to have abandoned all hope of recovering that fortress; for he soon afterwards caused to be constructed across the isthmus the strong lines of San Roque, and thus completely isolated Gibraltar from his Spanish dominions. The Dutch acceded to the Treaty of Seville shortly after its execution, on the understanding that they should receive entire satisfaction respecting the India Company established by the Emperor at Ostend. Charles VI. was indignant at being thus treated by Spain. . . . On the death of Antonio Farnese, Duke of Parma, January 10th 1731, he took military possession of that state. . . . The versatility of the cabinets of that age, however, enabled the Emperor to attain his favourite object at a moment when he least expected it. The Queen of Spain, wearied with the slowness of Cardinal Fleury in carrying out the provisions of the Treaty of Seville, suddenly declared, in a fit of passion, that Spain was no longer bound by that treaty (January 1731). Great Britain and the Dutch States, in concert with the Spanish Court, without the concurrence of France, now entered into negociations with the Emperor, which were skilfully conducted by Lord Waldegrave, to induce him to accede to the Treaty of Seville; and, on March 16th 1731, was concluded what has been called the Second Treaty of Vienna. Great Britain and the States guaranteed the Pragmatic Sanction; and the Emperor, on his side, acceded to the provisions of Seville respecting the Italian duchies, and agreed to annihilate the commerce of the Austrian Netherlands with the Indies by abolishing the obnoxious Ostend Company. He also engaged not to bestow his daughter on a Bourbon prince, or in any other way that might endanger the balance of power in Europe. . . . In the following November an English squadron disembarked at Leghorn 6,000 Spaniards, who took possession of that place, as well as Porto Ferrajo, Parma, and Piacenza, in the name of Don Carlos, as Duke of Parma and presumptive heir of Tuscany."—T. D. 1807-1808.—Napoleon's plots for the theft of the Spanish crown.—The popular rising.—Accession of Ferdinand VII.—"For more than ten years Spain had been drawn in the wake of revolutionary France. To Napoleon from the beginning of his reign she had been as subservient as Holland or Switzerland; she had made war and peace at his bidding, had surrendered Trinidad to make the treaty of Amiens, had given her fleet to destruction at Trafalgar. In other states equally subservient, such as Holland and the Italian Republic, Napoleon had remodelled the government at his pleasure, and in the end had put his own family at the head of it. After Tilsit he thought himself strong enough to make a similar change in Spain, and the occupation of Portugal seemed to afford the opportunity of doing this. By two conventions signed at Fontainebleau on October 27 [see PORTUGAL: A. D. 1807], the partition of Portugal was arranged with Spain. The Prince of the Peace was to become a sovereign prince of the Algarves, the King of Spain was to have Brazil with the title of Emperor of the two Americas, &c.; but the main provision was that a French army was to stand on the threshold of Spain ready to resist any intervention of England. The occupation of Portugal took place soon after, Junot arriving at Lisbon on November 30, just as the royal family with a following of several thousands set sail for Brazil under protection of the English fleet. At the same time there commenced in defiance of all treaties a passage of French troops into Spain, which continued until 80,000 had arrived, and had taken quiet possession of a number of Spanish fortresses. At last Murat was appointed to the command of the army of Spain. He entered the country on March 1, 1808, and marched on Madrid, calculating that the king would retire and take refuge at Seville or Cadiz. This act revealed to the world, and even to a large party among the French themselves, the nature of the power which had been created at Tilsit. The lawless acts of Napoleon's earlier life were palliated by the name of the French Revolution, and since Brumaire he had established a character for comparative moderation. But here was naked violence without the excuse of fanaticism; and on what a scale! One of the greater states of Europe was in the hands of a burglar, who would moreover, if successful, become king not only of Spain but of a boundless empire in the New World. The sequel was worse even than this commencement, although the course which events took seems to show that by means of a little delay he might have attained his end without such open defiance of law. The administration of Spain had long been in the contemptible hands of Manuel Godoy, supposed to be the queen's lover, yet at the same time high in the favor of King Charles IV. Ferdinand, the heir apparent, headed an opposition, but in character he was not better than the trio he opposed, and he had lately been put under arrest on suspicion of designs upon his father's life. To have fomented this opposition without taking either side, and to have rendered both sides equally contemptible to the Spanish people, was Napoleon's game. The Spanish people, who profoundly admired him, might then have been induced to ask him for a king. Napoleon, however, perpetrated his crime before the scandal of the palace broke out. The march of Murat now brought it to a head. On March 17 a tumult broke out at Aranjuez, which led to the fall of the favourite, and then to the abdication of the king, and the proclamation of Ferdinand amid universal truly Spanish enthusiasm. It was a fatal mistake to have forced on this popular explosion, and Napoleon has characteristically tried to conceal it by a supposititious letter, dated March 29, in which he tries to throw the blame upon Murat, to whom the letter professes to be addressed. It warns Murat against rousing Spanish patriotism and creating an opposition of the nobles and clergy, which will lead to a 'levée en masse,' and to a war without end. It predicts, in short, all that took place, but it has every mark of invention, and was certainly never received by Murat. The reign of Ferdinand having thus begun, all that the French could do was to abstain from acknowledging him, and to encourage Charles to withdraw his abdication as given under duress. By this means it became doubtful who was king of Spain, and Napoleon, having carefully refrained from taking a side, now presented himself as arbiter. Ferdinand was induced to betake himself to Napoleon's presence at Bayonne, where he arrived on April 21; his father and mother followed on the 30th. Violent scenes took place between father and son: news arrived of an insurrection at Madrid and of the stern suppression of it by Murat. In the end Napoleon succeeded in extorting the abdication both of Charles and Ferdinand. It was learned too late that the insurrection of Spain had not really been suppressed. This crime, as clumsy as it was monstrous, brought on that great popu-

lar insurrection of Europe against the universal monarchy, which has profoundly modified all subsequent history, and makes the Anti-Napoleonic Revolution an event of the same order as the French Revolution. A rising unparalleled for its suddenness and sublime spontaneousness took place throughout Spain and speedily found a response in Germany. A new impulse was given, out of which grew the great nationality movement of the nineteenth century." —J. R. Seeley, *Short Hist. of Napoleon I., ch.* 5, *sect.* 1.

A. D. 1808 (May—September).—The stolen crown conferred on Joseph Bonaparte.—National revolt.—Organization of Juntas and planning of guerilla war.—French reverses.—Quick flight of Joseph Bonaparte from Madrid.—Arrival of English forces to aid the people.— "Murat was disappointed of the crown of Spain, on which he had fixed his hopes. It had been refused with surprise and indignation by Napoleon's brother Louis, who wore reluctantly even that of Holland, but was unwilling to exchange it for a still deeper royal servitude. Joseph Bonaparte, however, consented to abandon his more tranquil throne of Naples for the dangers and discontents which surrounded that of Spain. Napoleon, who had nominated him to it June 6th, was desirous of procuring at least the apparent consent of the Spanish nation. The Council of Castile, the chief political body of Spain, when informed of the Treaties of Bayonne, was at last induced to give a cold and reluctant assent to the accession of Joseph. Its example was followed by the Supreme Junta and the municipality of Madrid. There was, indeed, no alternative but war. Ferdinand displayed on the occasion all the baseness of his soul in its true colours. He not only wrote to Napoleon to express his satisfaction at the elevation of Joseph, he even addressed a letter of congratulation to the man who had usurped his crown! thus testifying under his own hand his utter unworthiness to wear it. A Junta of 150 Spanish notables, which had been summoned to Bayonne, accepted a constitution proposed by Napoleon, July 7th, and a day or two after Joseph left Bayonne for Madrid. He had signed on the 5th a treaty with his brother Napoleon, by which he renounced the crown of Naples, made, as King of Spain, a perpetual offensive alliance with France, fixed the number of troops and ships to be provided by each nation, and agreed to the establishment of a commercial system. By an act called Constitutional Statute, July 15th, the vacant throne of Naples was bestowed upon Joachim Murat. Ferdinand had found means to despatch from Bayonne a proclamation addressed to the Asturians, and dated May 8th, in which he called upon them to assert their independence and never to submit to the perfidious enemy who had deprived him of his rights. This letter naturally made a great impression on a proud and sensitive people; nor was its effect diminished by another proclamation which Ferdinand and his brothers were compelled to sign at Bordeaux, May 12th, calling upon the Spaniards not to oppose 'the beneficent views' of Napoleon. At this last address, evidently extorted from a prisoner, a general cry of indignation arose in Spain; the people everywhere flew to arms, except where prevented by the presence of French troops. The city of Valencia renounced its obedience to the Government of Madrid, May 23rd; Seville followed its example, and on the 27th, Joseph Palafox organised at Saragossa the insurrection of Aragon. As these insurrections were accompanied with frightful massacres, principally of persons who had held high civil or military posts under Charles IV., the better classes, to put an end to these horrible scenes, established central Juntas in the principal towns. . . . They proposed not to meet the enemy in pitched battles in the open field, but to harass, wear out, and overcome him by 'guerilla,' or the discursive and incessant attacks of separate small bands. The Supreme Junta issued instructions for conducting this mode of warfare. Andalusia was better fitted for organising the revolt, if such it can be called, than any other province of Spain. Its population formed one-fifth of the whole nation, it possessed the sole cannon-foundry in the kingdom, it contained half the disposable Spanish army, and it could receive assistance from the English both by means of Gibraltar and of Collingwood's fleet that was cruising on the coast. One of the first feats of arms of the Spaniards was to compel the surrender of five French ships of the line and a frigate, which had remained in the port of Cadiz ever since the battle of Trafalgar (June 14th). Marshal Moncey was repulsed towards the end of June in an advance upon Valencia, and compelled to retreat upon Madrid with a loss of one-third of his men. In the north-west the Spaniards were less fortunate. Cuesta, with a corps of 25,000 men, was defeated by Marshal Bessières, July 14th, at Medina del Rio Seco. The consequence of this victory was the temporary submission of Leon, Palencia, Valladolid, Zamora, and Salamanca to the French. But this misfortune was more than counterbalanced by the victory of General Castaños over the French in Andalusia, a few days after. Generals Dupont and Vedel had advanced into that province as far as Cordova, but they were defeated by Castaños with the army of Andalusia at Baylen, July 20th. On this occasion, the commencement of the French reverses in Spain, 18,000 French soldiers laid down their arms. Joseph Bonaparte found it prudent to leave Madrid, August 1st, which he had only entered on the day of the battle, and fly to Burgos. This important victory not only inspired the Spaniards with confidence, but also caused them to be regarded in Europe as a substantive Power. On the day after the battle Castaños issued a proclamation which does him great honour. He invoked the Spaniards to show humanity towards the French prisoners of war, and threatened to shoot those who should maltreat them. Such, however, was the exasperation of the people against their invaders, that numbers of the French were massacred on their route to Cadiz for embarkation, and the remainder were treated with barbarous inhumanity. These cruelties had, however, been provoked by the atrocities of the French at the capture and sack of Cordova. The campaign in Aragon was still more glorious for the Spaniards. Palafox, whether or not he was the poltroon described by Napier, had at all events the merit of organising, out of almost

nothing, the means by which the French were repulsed in several desperate assaults upon Saragossa, and at length compelled to retreat after a siege of some weeks (August 14th). The patriot cause was soon after strengthened by the arrival at Corunna of General La Romana, with 7,000 of his men from Denmark (Sept. 20th). Keats, the English admiral in the Baltic, had informed him of the rising of his countrymen and provided him the means to transport his troops from Nyborg. The English Government, soon after the breaking out of the insurrection, had proclaimed a peace with the Spanish nation (July 4th 1808), and had prepared to assist them in their heroic struggle. The example of Spain had also encouraged the Portuguese to throw off the insufferable yoke of the French. A Junta was established at Oporto, June 6th, and an insurrection was organised in all parts of the kingdom where the French forces were not predominant. Sir Arthur Wellesley, with about 10,000 British troops, landed at Mondego Bay, July 31st."—T. H. Dyer, *Hist. of Modern Europe, bk.* 7, *ch.* 14 (*v.* 4).

A. D. 1808 (September—December).—Napoleon's overwhelming campaign against the Spanish armies.—Joseph reinstated at Madrid.—"The French disasters in the Peninsula shook the belief in Napoleon's invincibility which had prevailed throughout the Continent, and the Emperor saw that he must crush the Spaniards at once, before the English could advance from the fortified base they had acquired on the flank of the Spanish plains. To secure his power on the side of Germany, he had a prolonged interview with the Czar at Erfurt. . . . On the 14th October the two Emperors parted; and at the end of the month Napoleon set out from Paris for Bayonne, and continued his journey to Vitoria. In September the French had evacuated Tudela and Burgos, and had been driven from Bilbao by General Joachim Blake [a Spanish officer of Irish descent]. But such vast reinforcements had been poured across the Pyrenees, that the French armies in Spain now numbered 250,000 men, and of these 180,000 were drawn up behind the Ebro. On the last day of October Lefevre re-took Bilbao; and Blake, after a defeat at Tornosa, fell back upon Espinosa, where Napoleon, upon his arrival, directed Marshal Victor . . . and Lefevre to assail him with 40,000 men. The Spaniards, though numbering only 25,000, held their ground till the morning of the second day's fighting (11th November). With one part of the fugitives Blake made a stand at Reynosa on the 13th against Marshal Soult, who had achieved a victory over Belvedere at Burgos on the 10th; but they were again broken, and fled to the mountains of the Cantabrian chain. With the other part of the fugitives, about 10,000, the Marquis of La Romana made his way into Leon. Castaños and Palafox had a united force of 43,000 men and 40 guns; but they were wrangling over their plans when Marshal Lannes, the intrepid Duke of Montebello, . . . appeared with 35,000 men, and broke their centre at Tudela. But on the Spanish left, the troops who had conquered at Baylen not only maintained their ground with obstinacy, but drove back the French. At length they were outnumbered, and Castaños fell back in admirable order upon Madrid through Calatayud. The right, under Palafox, retired in disorder to Saragossa; and now the road to Madrid was blocked only by General San Juan with 12,000 men, who had entrenched the Somo Sierra Pass. But this post also was carried on the 30th November by the Polish lancers of the Imperial Guard, who rode up and speared the artillerymen at their guns. Aranjuez was at once abandoned by the central Junta, and on the 2nd December the French vanguard appeared on the heights north of Madrid. The capital became at once a scene of tumult and confusion: barricades were erected, and the bells sounded the alarm, but no discipline was visible in the assembling bands; and when the heights of the Retiro, overlooking the city, were carried by the French on the morning of the 3rd December, the authorities sent out to arrange a surrender. On the following morning . . . the French entered the city, Joseph was again installed in the palace, where deputations waited upon him to congratulate him and renew their professions of devoted attachment, and the city settled down once more to tranquil submission to the foreigner."—H. R. Clinton, *The War in the Peninsula, ch.* 3.

A. D. 1808-1809 (August—January).—Wellington's first campaign.—Convention of Cintra.—Evacuation of Portugal by the French.—Napoleon in the field.—Sir John Moore's advance into Spain.—His retreat.—His repulse of Soult at Corunna.—His death.—"Sir Arthur Wellesley's division comprised 9,000 men. Another corps, under sir John Moore, which had just arrived from the Baltic, numbered 11,000 men. These two detachments were to co-operate. But their united efforts were to be directed by sir Hew Dalrymple and sir Harry Burrard, two generals whose exploits were better known in the private records of the Horse Guards than in the annals of their country. . . . Sir Arthur Wellesley landed his troops at Figuiera, a difficult task on an iron coast. On the 7th of August, major-general Spencer's corps joined the army. With 10,000 British and 5,000 Portuguese, sir Arthur Wellesley then prepared to march towards Lisbon. On the 17th he defeated at Roliça the French under Laborde. On the 20th he was at Vimiero, having been joined by general Anstruther and general Acland with their corps. He had now an army of 17,000 men. Junot had joined Laborde and Loison at Torres Vedras, and their united force was about 14,000 men, of whom 1,600 were cavalry. Early in the morning of the 21st, the French attacked the British in their position. Sir Harry Burrard had arrived on the night of the 20th, but did not land. The principal attack on the British was on the centre and left; the sea being in their rear. The attack was repulsed. Kellermann then attacked with the French reserve, and he also was driven back. Junot's left wing and centre were discomfited. The road of Torres Vedras, the shortest road to Lisbon, was uncovered. When the action was nearly over, sir Harry Burrard had landed. In a private letter, sir Arthur Wellesley wrote, 'The French got a terrible beating on the 21st. They

did not lose less, I believe, than 4,000 men, and they would have been entirely destroyed, if sir H. Burrard had not prevented me from pursuing them. Indeed, since the arrival of the great generals, we appear to have been palsied, and everything has gone on wrong.' Sir John Moore arrived with his corps on the 21st, and his troops were nearly all landed when hostilities were suspended by the Convention of Cintra for the evacuation of Portugal by the French. Sir Arthur writes to Lord Castlereagh, 'Although my name is affixed to this instrument, I beg that you will not believe that I negotiated it, that I approve of it, or that I had any hand in wording it.' On the 5th of September, he writes, 'It is quite impossible for me to continue any longer with this army; and I wish, therefore, that you would allow me to return home and resume the duties of my office.' Dalrymple, Burrard, and Wellesley were all recalled home. Sir John Moore remained at Lisbon, having been appointed to command the army. A Court of Inquiry was ordered on the subject of 'the late transactions in Portugal.' Wellesley had to bear much before the publicity of these proceedings was to set him right in public opinion. The Inquiry ended in a formal disapprobation of the armistice and convention on the part of the king being communicated to sir Hew Dalrymple. Neither of the two 'great generals' was again employed. One advantage was gained by the Convention. The Russian fleet in the Tagus was delivered up to the British. Sir John Moore, late in October, began his march into Spain, 'to co-operate,' as his instructions set forth, 'with the Spanish armies in the expulsion of the French.' He was to lead the British forces in Portugal; and to be joined by sir David Baird, with 10,000 men to be landed at Corunna. Instead of finding Spanish armies to co-operate with, he learned that the French had routed and dispersed them. Napoleon had himself come to command his troops; and had arrived at Bayonne on the 3rd of November. Moore was separated from Baird by a wide tract of country. He had been led by false information to divide his own army. He remained for some time at Salamanca, inactive and uncertain. Madrid was soon in the hands of the French. Moore made a forward movement against the advanced corps of Soult; and then, learning that the French armies were gathering all around him, he determined to retreat. Sir David Baird had previously joined him. Moore had abandoned all hopes of defending Portugal, and had directed his march towards Corunna. He commenced his retreat from Sahagun on the evening of the 24th of December. During this retreat, the retiring army constantly turned upon the pursuers, always defeating them, and on one occasion capturing general Lefebvre. The winter had set in with terrible severity; the sufferings of the troops were excessive; disorganization, the common consequence of a retreat, added to their danger. Moore saved his army from destruction by an overwhelming force when he carried it across the Esla, effectually destroying the bridge by which they passed the swollen stream. But Moore could not save his men from their own excesses, which made enemies of the inhabitants of every place through which they passed. At Lugo, on the 7th of January, 1809, the British general halted his exhausted troops, determined to give battle to Soult, to whom Napoleon had given up the pursuit of the English army, having received despatches which indicated that war with Austria was close at hand. Soult declined the conflict; and on the British marched to Corunna. On the 11th, when they had ascended the heights from which Corunna was visible, there were no transports in the bay. The troops met with a kind reception in the town; and their general applied himself to make his position as strong as possible, to resist the enemy that was approaching. On the evening of the 14th the transports arrived. The sick and wounded were got on board; and a great part of the artillery. Fourteen thousand British remained to fight, if their embarkation were molested. The battle of Corunna began at two o'clock on the 16th of January. Soult had 20,000 veterans, with numerous field-guns; and he had planted a formidable battery on the rocks, commanding the valley and the lower ridge of hills. Columns of French infantry descended from the higher ridge; and there was soon a close trial of strength between the combatants. From the lower ridge Moore beheld the 42nd and 50th driving the enemy before them through the village of Elvina. He sent a battalion of the guards to support them; but through a misconception the 42nd retired. Moore immediately dashed into the fight; exclaimed 'Forty-second, remember Egypt,' and sent them back to the village. The British held their ground or drove off their assailants; and victory was certain under the skilful direction of the heroic commander, when he was dashed to the earth by a shot from the rock battery. Sir David Baird, the second in command, had also fallen. Moore was carried into Corunna; and endured several hours of extreme torture before he yielded up his great spirit. The command had devolved upon general Hope, who thought that his first duty was now to embark the troops. . . . When the sufferers in Moore's campaign came home the hospitals were filled with wounded and sick; and some of the troops brought back a pestilential fever."—C. Knight, *Crown Hist. of Eng., ch.* 57 (*abridgment of ch.* 28, *v.* 7, *of Popular Hist. of Eng.*).

A. D. 1808-1809 (December—March).—The siege of Saragossa.—"When Moore was pursued by Napoleon, the Duke of Infantado, who had rallied 20,000 men in New Castile after the fall of Madrid, formed the Quixotic design of re-taking the capital. Marshal Victor, Duke of Belluno, utterly crushed his force at Ucles on the 13th January, 1809, where 1,500 Spaniards were slain, and 9,000 men and all the stores and artillery were taken. The French, in retaliation for the Spaniards having hanged some soldiers who had been captured, murdered many of the prisoners in cold blood, and perpetrated infamous atrocities on the inhabitants of Ucles. The Spaniards, however, showed their extraordinary valour behind walls in their second defence of

Saragossa, the siege of which [abandoned the previous August, after a fierce struggle] was renewed by 35,000 French under Marshals Moncey and Mortier, on the 20th December, 1808. The city was defended by Palafox, who had retired into it after his defeat at Tudela. The second siege of this renowned city — though the defence eventually proved unsuccessful — crowns with everlasting glory the Spanish War of Independence. . . . 'The citizens gave up their goods, their houses, and their bodies to the war, and, mingling with the peasants and soldiers, formed one mighty garrison suited to the vast fortress they had formed. For doors and windows were built up, house-fronts loopholed, internal communications opened, streets trenched and crossed by earthen ramparts mounted with cannon, and every strong building was a separate fortification: there was no weak point — there could be none in a city which was all fortress, where the space covered by houses was the measure of the ramparts' (Napier). All the trees outside the walls were cut down, the houses destroyed, and the materials carried into the town. . . . The public magazines were provisioned for six months, and all the conventual communities and the inhabitants had large private stores. Nearly 3,000 artillerymen and sappers, and 30,000 men of the regular army, had taken refuge in the city, and at least 20,000 citizens and fugitive peasants were fit for arms. The popular leaders had recourse to all the aid which superstition could give them: denunciations of the wrath of Heaven were hurled on those who were suspected of wavering, and the clergy readily recounted stories of miracles to encourage the faithful. Saragossa was 'believed to be invincible through the protection of Our Lady of the Pillar, who had chosen it for the seat of her peculiar worship. . . . An appearance in the sky, which at other times might have passed unremembered, and perhaps unnoticed, had given strong confirmation to the popular faith. About a month before the commencement of the first siege, a white cloud appeared at noon, and gradually assumed the form of a palm-tree; the sky being in all other parts clear, except that a few specks of fleecy cloud hovered about the larger one. It was first observed over the church of N. Señora del Portillo, and moving from thence till it seemed to be immediately above that of the pillar, continued in the same form about half an hour, and then dispersed. The inhabitants were in a state of such excitement that crowds joined in the acclamation of the first beholder, who cried out, "A miracle!"— and after the defeat of the besiegers had confirmed the omen, a miracle it was universally pronounced to have been, the people proclaiming with exultation that the Virgin had by this token prefigured the victory she had given them, and promised Zaragoza her protection as long as the world should endure' (Southey). . . . At daybreak on the 21st December, General Suchet carried the works on the Monte Torrero; but Count Gazan de la Peyrière — a general highly distinguished in the Swiss and Italian campaigns — failed in his attack upon the suburbs on the left bank of the Ebro, and the confidence of the Spaniards in their leaders was restored. Three days later the town was completely invested, the siege operations being directed by General La Coste. On the 30th December, the trenches being completed, the town was summoned to surrender, and the example of Madrid was referred to; but Palafox replied proudly, 'If Madrid has surrendered, Madrid has been sold: Saragossa will neither be sold nor surrendered.' Marshal Moncey being recalled to Madrid, Junot took command of his corps. The besieged attempted several sallies, which were repulsed; and after a heavy bombardment, the St. Joseph convent was carried by the French on the 11th January, 1809. The Spanish leaders maintained the courage of their countrymen by proclaiming a forged despatch narrating the defeat of Napoleon. The guerrilla bands began to gather in round the French, and their condition was becoming perilous. But the command had now been taken by the invincible Marshal Lannes, Duke of Montebello (who had been detained by a long illness); the approaches were steadily pushed on, the breaches in the walls became wider, and on the 29th the French rushed forward and took possession of the ramparts. 'Thus the walls of Zaragoza went to the ground; but Zaragoza remained erect, and as the broken girdle fell from the heroic city, the besiegers started at her naked strength. The regular defences had crumbled, but the popular resistance was instantly called with all its terrors into action; and as if fortune had resolved to mark the exact moment when the ordinary calculations of science should cease, the chief engineers on both sides [La Coste and San Genis] were simultaneously slain' (Napier). . . . The Junta was in no degree cowed: they resolved on resistance to the last extremity, and a row of gibbets was raised for any who should dare to propose surrender. Additional barricades were constructed, and alarm-bells were rung to summon the citizens to the threatened points. As each house was in itself a fort which had to be separately attacked, mining now was had recourse to. In this art the skill of the French was unquestioned, and room after room and house after house was carried. But still the constancy of the besieged was unshaken, and the French soldiers began to murmur at their excessive toil. From so many of the women and children being huddled together in the cellars of the city, for safety from the shells and cannon-balls, a pestilence arose, and slowly spread from the besieged to the besiegers. 'The strong and the weak, the daring soldier and the shrinking child, fell before it alike; and such was the predisposition to disease, that the slightest wound gangrened and became incurable. In the beginning of February the daily deaths were from four to five hundred; — the living were unable to bury the dead; and thousands of carcases, scattered about the streets and courtyards, or piled in heaps at the doors of the churches, were left to dissolve in their own corruption, or be licked up by the flames of burning houses as the defence became concentrated' (Napier). On the 18th February a great assault took place, and so much of the town was carried that further resistance was hopeless. Terms of capitulation were offered by the besieged, but were rejected by Lannes, and on the 19th the heavy guns opened from the batteries on the left bank of the Ebro, to sweep the houses on the quays. On the 20th, when all the great leaders were dead or prostrated with fever, and none but the soldier-priest Ric remained to lead the diminished band of heroes, Saragossa surrendered, — at discretion,

according to the French; on honourable terms, according to the Spaniards. Such was the close of one of the most heroic defences in the history of the world. If any conditions were really accepted, they were ill observed by the victors: the churches were plundered, and many of the clergy and monks were put to death. . . . The other strongholds in Aragon, one after another, surrendered to the French before the end of March. In Catalonia the French, under General Gouvion St. Cyr, had met with equal success. With 30,000 men St. Cyr had taken Rosas after a month's siege — which was prolonged by the presence of that brilliant naval commander, Lord Cochrane (afterwards Earl of Dundonald), with an English frigate in the harbour — in December, 1808, had routed Reding at Cardadeu, had relieved Barcelona (where General Duhesme was shut up with 8,000 Frenchmen), and had again, on the 21st December, routed Reding at Molinos del Rey, where all the Spanish stores, including 30,000 muskets from England, were taken. In the spring of 1809 Reding made another attempt to achieve the independence of the north-east, and moved to relieve Saragossa; but on the 17th February he was met by St. Cyr at Igualada, where Reding himself was killed and his army was dispersed. The siege of Gerona alone in the north-east of Spain remained to be undertaken." —H. R. Clinton, *The War in the Peninsula, ch.* 3.

Also in: C. M. Yonge, *Book of Golden Deeds, p.* 365.—R. Southey, *Hist. of the Peninsular War, ch.* 18 (*v.* 3).—Sir W. F. P. Napier, *Hist. of the War in the Peninsula, bk.* 5, *ch.* 2–3 (*v.* 1).—Baron de Marbot, *Memoirs, v.* 1, *ch.* 40.

A. D. 1809 (February — June).—The war in Aragon.— Siege of Gerona. — "This decisive victory [of Igualada] terminated the regular war in Catalonia; and St Cyr, retiring to Vich, commenced preparations for the siege of Gerona. The undertaking was for some time delayed by the discord of St Cyr and Verdier; but in the beginning of May they appeared before the town, and on the 1st of June the investment was completed. But the prowess of the Spaniards nowhere appeared to greater advantage than in the defence of their walled towns: it was not till 12th August, after 37 days of open trenches, and two unsuccessful assaults, that the French possessed themselves of the fort of Monjuich, which commands the town: yet the gallant governor, Alvarez, still held out, and the safe arrival of a convoy sent by Blake reanimated the spirit of the garrison. The grand assault of the lower town was given (Sept. 17); but the French were repulsed from the breach with the loss of 1,600 men; and St Cyr, despairing of carrying the place by force, converted the siege into a blockade. The capture of three successive convoys, sent by Blake for their relief, reduced the besieged at last to extremity; famine and pestilence devastated the city; but it was not till the inhabitants were reduced to the necessity of eating hair that the place was yielded (Dec. 12) to Augereau, who had superseded St Cyr in the command. A more memorable resistance is not on record; but the heroic Alvarez, to the eternal disgrace of Augereau, was immured in a dungeon at Figueras, where he soon afterwards died. Junot, in the mean time, had been taken ill, and was succeeded in the command in Aragon by Suchet, a young general whose talents and success gave him a brilliant career in the later years of the empire. His first essay, however, was unfortunate; for the indefatigable Blake, encouraged by the retreat of St Cyr towards the Pyrenees, had again advanced with 12,000 men; and an action ensued (May 23) at Alcaniz, in which the French, seized with a panic, fled in confusion from the field. This unwonted success emboldened Blake to approach Saragossa; but the discipline and manœuvres of the French asserted their wonted superiority in the plains; the Spaniards were routed close to Saragossa (June 16), and more decisively at Belchite the next day. The army of Blake was entirely dispersed; and all regular resistance ceased in Aragon, as it had done in Catalonia, after the fall of Gerona."—*Epitome of Alison's Hist. of Europe, sect.* 566–567.

A. D. 1809 (February — July). — Wellington again in the English command.—The French advance into Portugal checked. — Passage of the Douro by the English.— Battle of Talavera. —"Napoleon, before Moore's corps had actually left Corunna, conceived the war at an end, and, in issuing instructions to his marshals, anticipated, with no unreasonable confidence, the complete subjugation of the Peninsula. Excepting, indeed, some isolated districts in the east, the only parts now in possession of the Spaniards or their allies were Andalusia, which had been saved by the precipitate recall of Napoleon to the north; and Portugal, which, still in arms against the French, was nominally occupied by a British corps of 10,000 men, left there under Sir John Cradock at the time of General Moore's departure with the bulk of the army for Spain. The proceedings of the French marshals for the recovery of the entire Peninsula were speedily arranged. Lannes took the direction of the siege of Saragossa, where the Spaniards, fighting as usual with admirable constancy from behind stone walls, were holding two French corps at bay. Lefebvre drove one Spanish army into the recesses of the Sierra Morena, and Victor chased another into the fastnesses of Murcia. Meantime Soult, after recoiling awhile from the dying blows of Moore, had promptly occupied Gallicia upon the departure of the English, and was preparing to cross the Portuguese frontier on his work of conquest. In aid of this design it was concerted that while the last-named marshal advanced from the north, Victor, by way of Elvas, and Lapisse by way of Almeida, should converge together upon Portugal, and that when the English at Lisbon had been driven to their ships the several corps should unite for the final subjugation of the Peninsula by the occupation of Andalusia. Accordingly, leaving Ney to maintain the ground already won, Soult descended with 30,000 men upon the Douro, and by the end of March was in secure possession of Oporto. Had he continued his advance, it is not impossible that the campaign might have had the termination he desired; but at this point he waited for intelligence of the English in his front and of Victor and Lapisse on his flank. His caution saved Portugal, for, while he still hesitated on the brink of the Douro, there again arrived in the Tagus that renowned commander before whose genius the fortunes not only of the marshals, but of their imperial master, were finally to fail. England was now at the commencement of her greatest war. The system of small expeditions and insignificant diversions,

though not yet conclusively abandoned, was soon superseded by the glories of a visible contest: and in a short time it was known and felt by a great majority of the nation, that on the field of the Peninsula England was fairly pitted against France. . . . At the commencement of the year 1809, when the prospects of Spanish independence were at their very gloomiest point, the British Cabinet had proposed and concluded a comprehensive treaty of alliance with the Provisional Administration of Spain; and it was now resolved that the contest in the Peninsula should be continued on a scale more effectual than before, and that the principal, instead of the secondary, part should be borne by England. . . . England's colonial requirements left her little to show against the myriads of the continent. It was calculated at the time that 60,000 British soldiers might have been made disposable for the Peninsular service, but at no period of the war was such a force ever actually collected under the standards of Wellington, while Napoleon could maintain his 300,000 warriors in Spain, without materially disabling the arms of the Empire on the Danube or the Rhine. We had allies, it is true, in the troops of the country; but these at first were little better than refractory recruits, requiring all the accessories of discipline, equipment, and organisation; jealous of all foreigners, even as friends, and not unreasonably suspicious of supporters who could always find in their ships a refuge which was denied to themselves. But above all these difficulties was that arising from the inexperience of the Government in continental warfare. . . . When, however, with these ambiguous prospects, the Government did at length resolve on the systematic prosecution of the Peninsular war, the eyes of the nation were at once instinctively turned on Sir Arthur Wellesley as the general to conduct it. . . . He stoutly declared his opinion that Portugal was tenable against the French, even if actual possessors of Spain, and that it offered ample opportunities of influencing the great result of the war. With these views he recommended that the Portuguese army should be organised at its full strength; that it should be in part taken into British pay and under the direction of British officers, and that a force of not less than 30,000 English troops should be despatched to keep this army together. . . . Such was the prestige already attached to Wellesley's name that his arrival in the Tagus changed every feature of the scene. No longer suspicious of our intentions, the Portuguese Government gave prompt effect to the suggestions of the English commander. . . . The command-in-chief of the native army was intrusted to an English officer of great distinction, General Beresford; and no time was lost in once more testing the efficacy of the British arms. . . . Of the Spanish armies we need only say that they had been repeatedly routed with invariable certainty and more or less disgrace, though Cuesta still held a nominal force together in the valley of the Tagus. There were, therefore, two courses open to the British commander: —either to repel the menaced advance of Soult by marching on Oporto, or to effect a junction with Cuesta, and try the result of a demonstration against Madrid. The latter of these plans was wisely postponed for the moment, and, preference having been decisively given to the former, the troops at once commenced their march upon the Douro. The British force under Sir Arthur Wellesley's command amounted at this time to about 20,000 men, to which about 15,000 Portuguese, in a respectable state of organisation, were added by the exertions of Beresford. Of these about 24,000 were now led against Soult, who, though not inferior in strength, no sooner ascertained the advance of the English commander, than he arranged for a retreat by detaching Loison with 6,000 men to dislodge a Portuguese post from his left rear. Sir Arthur's intention was to envelope, if possible, the French corps by pushing forward a strong force upon its left, and thus intercepting its retreat toward Ney's position, while the main body assaulted Soult in his quarters at Oporto. The former of these operations he intrusted to Beresford, the latter he directed in person. On the 12th of May the troops reached the southern bank of the Douro; the waters of which, 300 yards in width, rolled between them and their adversaries. . . . Availing himself of a point where the river by a bend in its course was not easily visible from the town, Sir Arthur determined on transporting, if possible, a few troops to the northern bank, and occupying an unfinished stone building, which he perceived was capable of affording temporary cover. The means were soon supplied by the activity of Colonel Waters—an officer whose habitual audacity rendered him one of the heroes of this memorable war. Crossing in a skiff to the opposite bank, he returned with two or three boats, and in a few minutes a company of the Buffs was established in the building. Reinforcements quickly followed, but not without discovery. The alarm was given, and presently the edifice was enveloped by the eager battalions of the French. The British, however, held their ground; a passage was effected at other points during the struggle; the French, after an ineffectual resistance, were fain to abandon the city in precipitation, and Sir Arthur, after his unexampled feat of arms, sat down that evening to the dinner which had been prepared for Soult. . . . This brilliant operation being effected, Sir Arthur was now at liberty to turn to the main project of the campaign — that to which, in fact, the attack upon Soult had been subsidiary — the defeat of Victor in Estremadura. . . . Cuesta would take no advice, and insisted on the adoption of his own schemes with such obstinacy, that Sir Arthur was compelled to frame his plans accordingly. Instead, therefore, of circumventing Victor as he had intended, he advanced into Spain at the beginning of July, to effect a junction with Cuesta and feel his way towards Madrid. The armies, when united, formed a mass of 78,000 combatants; but of these 56,000 were Spanish, and for the brunt of war Sir Arthur could only reckon on his 22,000 British troops, Beresford's Portuguese having been despatched to the north of Portugal. On the other side, Victor's force had been strengthened by the succours which Joseph Bonaparte, alarmed for the safety of Madrid, had hastily concentrated at Toledo; and when the two armies at length confronted each other at Talavera, it was found that 55,000 excellent French troops were arrayed against Sir Arthur and his ally, while nearly as many more were descending from the north on the line of the British com-

munications along the valley of the Tagus. On the 28th of July the British commander, after making the best dispositions in his power, received the attack of the French, directed by Joseph Bonaparte in person, with Victor and Jourdan at his side, and after an engagement of great severity, in which the Spaniards were virtually inactive, he remained master of the field against double his numbers, having repulsed the enemy at all points with heavy loss, and having captured several hundred prisoners and 17 pieces of cannon in this the first great pitched battle between the French and English in the Peninsula. In this well fought field of Talavera, the French had thrown, for the first time, their whole disposable force upon the British army without success; and Sir Arthur Wellesley inferred, with a justifiable confidence, that the relative superiority of his troops to those of the Emperor was practically decided. Jomini, the French military historian, confesses almost as much; and the opinions of Napoleon himself, as visible in his correspondence, underwent from that moment a serious change."—*Memoir of Wellington, from "The Times" of Sept.* 15-16, 1852.

A. D. 1809 (August—November).—Battles of Almonacid, Puerto de Baños, Ocana, and Alba de Tormes.—Soon after Wellington's unfruitful victory at Talavera, "Venegas had advanced as far as Aranjuez, and was besieging Toledo; but the retreat of the British having set the French armies at liberty, he was attacked and defeated after a sharp action at Almonacid (Aug. 11) by Dessoles and Sebastiani; and Sir Robert Wilson, who had approached Madrid with 6,000 Spaniards and Portuguese, was encountered and driven back by Ney (Aug. 8) at Puerto de Baños. The British at length, after lying a month at Deleitosa, were compelled, by the scandalous failure of the Spanish authorities to furnish them with supplies or provisions, to cross the mountains and fix their headquarters at Badajos, after an angry correspondence between Wellesley and Cuesta, who soon after was removed from his command. A gleam of success at Tamanes, where Marchand was routed with loss (Oct. 24) by Romana's army under the Duke del Parque, encouraged the Spaniards to make another effort for the recovery of Madrid; and an army of 50,000 men, including 7,000 horse and 60 pieces of cannon, advanced for this purpose from the Sierra Morena, under General Areizaga. The battle was fought (Nov. 12) at Ocana, near Aranjuez; but though the Spaniards behaved with considerable spirit, the miserable incapacity of their commander counterbalanced all their efforts, and an unparalleled rout was the result. Pursued over the wide plains of Castile by the French cavalry, 20,000 prisoners were taken, with all the guns and stores: the wreck was complete and irretrievable; and the defeat of the Duke del Parque (Nov. 25) at Alba de Tormes, dispersed the last force which could be called a Spanish army. It was evident from these events that Portugal was the only basis from which the deliverance of the Peninsula could be effected." —*Epitome of Alison's Hist. of Europe, sect.* 576 (*ch.* 62, *v.* 13 *of complete work*).

A. D. 1809 (August—December).—Wellington's difficulties.—His retreat into Portugal.—"In the course of the 29th, the army was reinforced by the arrival of a troop of horse-artillery, and a brigade of light troops from Lisbon, under General Crawford. Under the circumstances of his situation, however, it was impossible for Sir Arthur Wellesley to follow up his victory. The position he occupied was still one of extreme peril. A powerful enemy was advancing on his rear; and no reliance could be placed for the supply of his army, either on the promises of the Spanish General, or of the Junta. The army of Vanegas, which, in obedience to the orders of the Supreme Junta, had advanced from Madrilejos, was engaged, during the 28th and 29th, in endeavouring to dislodge the French garrison from Toledo. His advance pushed on during the night to the neighbourhood of Madrid, and took prisoners some patroles of the enemy. Vanegas, however no sooner learned from the prisoners that Joseph and Sebastiani were approaching, than he . . . desisted from any further offensive operations. The intelligence that Vanegas had failed in executing the part allotted to him, was speedily followed by information that Soult had with facility driven the Spaniards from the passes leading from Salamanca to Placentia. It was in consequence arranged between the Generals, that the British army should immediately march to attack Soult, and that Cuesta should remain in the position of Talavera, to protect this movement from any operation of Victor. The wounded likewise were to be left in charge of Cuesta. . . . On the morning of the 3rd of August, the British accordingly commenced their march on Oropesa. On his arrival there, Sir Arthur Wellesley received intelligence that Soult was already at Naval Moral. . . . Shortly after, a courier arrived from Cuesta, announcing, that, as the enemy were stated to be advancing on his flank, and as it was ascertained that the corps of Ney and Mortier had been united under Soult, he had determined on quitting his position, and joining the British army at Oropesa. This movement was executed the same night; and nearly the whole of the British wounded were left unprotected in the town of Talavera. The conduct of Cuesta, in this precipitate retreat, is altogether indefensible. . . . In quitting the position of Talavera, Cuesta had abandoned the only situation in which the advance of Victor on the British rear could be resisted with any prospect of success. . . . The whole calculations of Sir Arthur Wellesley were at once overthrown. . . . Sir Arthur determined to throw his army across the Tagus by the bridge of Arzobisbo. . . . Cuesta . . . followed the British in their retreat to the bridge of Arzobisbo, and leaving the Duke del Albuquerque with two divisions of infantry and one of cavalry to defend it, he withdrew the remainder of his army to Paraleda de Garben. The French, however, having taken post on the opposite side of the river, soon succeeded in discovering a ford by which they crossed, and surprising the Spaniards, drove them at once from the works, with the loss of 30 pieces of cannon. After this, Cuesta with his whole force fell back on Deleytosa, while the British moved to Xaraicejo. . . . Vanegas . . . remained with his army in the neighbourhood of Aranjuez. On the 5th of August, he succeeded in gaining a decided advantage over an advanced division of the enemy. . . . Harassed by inconsistent orders,

Vanegas was unfortunately induced again to advance, and give battle to the corps of Sebastiani at Almonacid. This engagement, though many of the Spanish troops behaved with great gallantry, terminated in the complete defeat of the army of Vanegas. It was driven to the Sierra Morena, with the loss of all its baggage and artillery. With this action terminated the campaign which had been undertaken for the relief of Madrid, and the expulsion of the enemy from the central provinces of Spain. The British army at Xaraicejo, still served as a shield to the southern provinces, and Sir Arthur Wellesley, (whom the gratitude of his country had now ennobled,) [raising him to the peerage as Baron Duke of Wellesley and Viscount Wellington of Talavera] considered it of importance to maintain the position he then occupied. But the total failure of supplies rendered this impossible, and about the 20th of August he fell back through Merida on Badajos, in the neighbourhood of which he established his army. At this period all operations in concert ceased between the English and Spanish armies. The Supreme Junta complained bitterly of the retreat of the former, which left the road to Seville and Cadiz open to the enemy, while the Marquis Wellesley, then ambassador in Spain, made strong representations of the privations to which the British army had been exposed, by the inattention and neglect of the authorities. In the correspondence which ensued, it appeared that the measure of retreat had been forced on Lord Wellington, by the absolute impossibility of supporting his army in the ground he occupied. . . . The year had closed in Spain triumphantly for the French arms, as it had commenced. The Spanish armies had sustained a series of unparalleled defeats. The British had retired into Portugal; and the efforts of Lord Wellington, were for the present, limited to the defence of that kingdom."—T. Hamilton, *Annals of the Peninsular Campaigns, ch. 7 and 9.*

A. D. 1809-1810 (October — September).—The Lines of Torres Vedras.—"Since Austria had laid down arms by signing the peace of Vienna, and had thus proved the inefficiency of England's last allies—since among the sovereigns of the Continent Napoleon boasted none but courtiers or subjects, Wellington saw that all the resources and all the efforts of his gigantic power would be turned against the only country which still struggled for the liberty of Europe. What could Spain achieve with her bands of insurgents and her defeated armies, albeit so persevering? or the small English army effect against so formidable an adversary, aided by the combined forces of so many nations? But during the very time when the world looked upon all as lost, and Napoleon's proudest enemies were growing weak, Wellington never despaired of the cause he had embraced. Far from allowing himself to be cast down by the magnitude or the imminence of the danger, he derived from that very circumstance, not only the resolution of fighting to the last extremity, but also the energy to conceive and to execute a project which will continue to be the admiration of the world, and an everlasting lesson to nations oppressed by foreign rule. He had always thought that some day, sooner or later, the whole of Europe would rise against Napoleon's tyranny, provided that an opportunity for such a rising were afforded to it by a prolonged resistance in certain points. The end to aim at therefore was, in his opinion, not so much to drive the French out of the Peninsula, as the tacticians of the central junta wildly fancied, but rather to keep the contest there alive at any cost, until the moment should arrive for so inevitable and universal a revolt. In view of the new invasion pouring into Spain, he could not dream of undertaking any offensive operations against the French. Even if conducted with genius, they would have rapidly exhausted his very limited forces. His small army . . . could not have lasted a month amidst the large masses of French troops then in Spain. He therefore resolved to entrench it in strong positions, rendered still more formidable by every resource of defensive warfare, where he might defy superiority in numbers and the risk of surprise, where he could also obtain supplies by sea, and whence if necessary he might embark in case of disaster; where, also, he might take advantage of the distances and the difficulties of communication which were so rapidly exhausting our troops, by creating around us a desert in which we should find it impossible to live. To stand out under these restricted but vigorously conceived conditions, and to resist with indomitable obstinacy until Europe, ashamed to let him succumb, should come to his succour, was the only course which afforded Wellington some chance of success in view of the feeble means at his disposal; and such, with equal firmness and decision, was the one he now adopted. The necessity which suggested it to him in no wise diminishes the merit or originality of an operation which was, one may say, without precedent in military history. The position he was seeking for he found in the environs of Lisbon, in the peninsula formed by the Tagus at its entrance to the sea. Protected on almost every side either by the ocean or the river, which at this point is nearly as wide as an inland sea, this peninsula was accessible only on the north where it joined the mainland. There, however, the prolongation of the Sierra d'Estrella presented a series of rugged heights, craggy precipices and deep ravines filled with torrents, forming a true natural barrier, the strength of which had already struck more than one military observer. . . . Wellington was the first who conceived and executed the project of transforming the whole peninsula into a colossal fortress, of more than a hundred miles in circumference. He desired that this fortress should be composed of three concentric enclosures, defended by cannon, and large enough to contain not only his army and the Portuguese allies—comprising the regular troops, the militia and Ordenanzas—but the whole available population of the Southern provinces of Portugal, with their harvests, their cattle and their provisions, so that the country surrounding Lisbon should offer no resource whatever to the invaders. He at the same time secured his retreat by means of a spacious and fortified port, in which, should any untoward accident occur, the English army and even the Portuguese troops might embark in safety. This immense citadel extended to the north from Zizembre and the heights of Torres Vedras, which protected its front, as far as

Alemquer; thence to the east by Sobral and Alvera it followed the counterforts of the Estrella which overhang the Tagus, and extended to Lisbon, where it was covered alike by the mouth of the river and by the ocean. . . . From the beginning of the month of October, 1809, with the aid of Colonel Fletcher of the Engineers, he had employed thousands of workmen and peasants, without intermission, in throwing up intrenchments, constructing redoubts, and forming sluices for inundating the plain."—P. A. D. 1810-1812.—The French advance into Portugal.—Their recoil from the Lines of Torres Vedras.—"By the spring of 1810, the French armies in Spain numbered fully 350,000 men, and Napoleon had intended to cross the Pyrenees, at the head of this enormous force. His marriage, however, or more probably the innumerable toils and cares of Empire prevented him from carrying out his purpose; and this was one of the capital mistakes of his life, for his presence was necessary on the scene of events. He still despised the insurrection of Spain; he held Wellington cheap as a 'Sepoy general'; strange as it may appear, he was wholly ignorant of the existence of the Lines of Torres Vedras, and he persisted in maintaining that the only real enemy in the Peninsula was the British army, which he estimated at 25,000 men. He gave Masséna 70,000, with orders 'to drive the English into the sea'; and at the same time, he sent a great army to subdue Andalusia and the South, false to his art in thus dividing his forces. A contest followed renowned in history, and big with memorable results for Europe. Masséna took the fortresses on the northeast of Portugal, and by the close of September had entered Beira; he met a bloody reverse at Busaco [September 27], but he succeeded in turning Wellington's flank, and he advanced, in high heart, from Coimbra, on Lisbon. To his amazement, however, the impregnable lines, a gigantic obstacle utterly unforeseen, rose before him, and brought the invaders to a stand, and the 'spoiled child of victory,' daring as he was, after vain efforts to find a vulnerable point, recoiled from before the invincible rampart, baffled and indignant, but as yet hopeful. Masséna, with admirable skill, now chose a formidable position near the Tagus, and held the British commander in check. . . . But Wellington, with wise, if stern, forethought, had wasted the adjoining region with fire and sword; Napoleon, meditating a new war, was unable to despatch a regiment from France; Soult, ordered to move from Andalusia to the aid of his colleague, paused and hung back; and Masséna, his army literally starved out, and strengthened by a small detachment only, was at last reluctantly forced to retreat. The movement began in March, 1811; it was conducted with no ordinary skill; but Wellington had attained his object and the French general re-entered Spain with the wreck only of a once noble force. Masséna, however, would not confess defeat; having restored and largely increased his army, he attacked Wellington at Fuentes de Onoro, and possibly only missed a victory, owing to the jealousies of inferior men. This, nevertheless, was his last effort; he was superseded in his command by Napoleon, unjust in this instance to his best lieutenant, and Wellington's conduct of the war had been completely justified. Torres Vedras permanently arrested Napoleon's march of conquest; the French never entered Portugal again. . . . Meantime the never-ceasing insurrection of Spain continued to waste the Imperial forces, and surrounded them, as it were, with a circle of fire. It was all in vain that another great army was struck down in the field at Ocana; that Suchet invaded and held Valencia; that Soult ravaged Andalusia; that Victor besieged Cadiz. The resistance of the nation became more intense than ever; Saguntum, which had defied Hannibal, Girona, Tortosa, and, above all, Tarragona, defended their walls to the last; and not a village from Asturias to Granada acknowledged Joseph at Madrid, as its lawful king. . . . After Fuentes de Onoro the contest in Spain had languished in 1811, though Marmont and Soult missed a great chance of assailing Wellington, with very superior numbers. In the following year the British commander pounced on Ciudad Rodrigo, and Badajoz, the keys of Spain from the Portuguese frontier, completely deceiving the distant Emperor, who would direct operations from Paris; and he defeated Marmont in a great battle, at Salamanca, beside the Tormes, which threw open to him the gates of Madrid. Yet, in an effort made against the communications of the French, the object he steadily kept in view, he was baffled by the resistance of Burgos, and before long he was in retreat on Portugal, having just escaped from a great French army, so various were the fortunes of this most instructive war."—W. O'C. Morris, *Napoleon, ch.* 10–11.

A. D. 1812 (June—August).—Wellington's victory at Salamanca.—Abandonment of Madrid by King Joseph.—"In the month of May, 1812, that rupture took place [between Napoleon and Alexander I. of Russia] which was to determine, by its issue, whether Europe should acknowledge one master; and Napoleon, too confident in his own fortunes, put himself at the head of his armies and marched on Moscow. The war in Spain, which had hitherto occupied the first place in public attention, became from that hour, as far as France was concerned, a matter of minor consideration. Whatever effective battalions were at the disposal of the war-minister, were forwarded to the Vistula; while to recruit the regiments in Spain, depôts were formed in the south, out of which, from time to time, a body of conscripts were equipped and dispatched

to reinforce the French armies. Lord Wellington's army consisted of 60,000 men, Portuguese and Spaniards included. Of these, 10,000 infantry, with about 1,200 cavalry, were cantoned on the Tagus at Almarez; while the commander-in-chief, with the remainder, prepared to operate, on the north of that river, against Marmont. The capture of the redoubts at Almarez had, in some degree, isolated the French marshal; and, although he was at the head of 50,000 veterans, Lord Wellington felt himself in a condition to cope with him. At the same time Lord Wellington had to observe Soult, who, commanding the army of the south, was around Seville and Cordova with 58,000 men — while Suchet held the eastern provinces with 50,000 excellent troops — Souham was in the north with 10,000 — and the army of the centre, probably 15,000 more, was disposed around the capital, and kept open the communications between the detached corps. On the other hand, there were on foot no Spanish armies deserving of the name. Bands of guerrillas moved, indeed, hither and thither, rendering the communications between the French armies and their depôts exceedingly insecure; but throughout the north, and west, and centre of Spain, there was no single corps in arms of any military respectability. In the east, Generals Lacy and Sarsfield were at the head of corps which did good service, and occupied Suchet pretty well; while D'Eroles, more bold than prudent, committed himself at Rhonda with General Rourke, in a combat which ended in his total defeat and the dispersion of his troops. Yet were the French far from being masters of the country. Few fortified towns, Cadiz and Alicante excepted, continued to display the standard of independence, but every Sierra and mountain range swarmed with the enemies of oppression, out of whom an army, formidable from its numbers, if not for its discipline, might at any moment be formed. But it had never entered into the counsels of the allies to furnish a nucleus round which such an army might be gathered. . . . Meanwhile, the commander-in-chief, after having given his army a few weeks' repose, . . . broke up from his cantonments, and advanced in the direction of Salamanca. On the 17th of June his divisions crossed the Tormes, by the fords above and below the town, and, finding no force in the field competent to resist them, marched direct upon the capital of the province." Salamanca was taken on the 27th of June, after a siege of ten days, and a series of manœuvres — a great game of tactics between the opposing commanders — ensued, which occupied their armies without any serious collision, until the 22d of July, when the decisive battle of Salamanca was fought. "The dispositions of the French, though masterly against one less self-collected, had been, throughout the day, in Wellington's opinion, full of hazard. They aimed at too much — and, manœuvring to throw themselves in force upon the English right, risked, as the event proved fatally, the weakening of their own right and centre. Lord Wellington saw that filing constantly in one direction disconnected the divisions of Marmont's army, and left an interval where he might strike to advantage. . . . It was the first mistake that Marmont had made, and Wellington never permitted him to retrieve it. Lord Wellington had dined amid the ranks of the third division, and Packenham, its frank and chivalrous leader, was one of those who shared his simple and soldier-like meal. To him the commander-in-chief gave his orders, somewhat in the following words: 'Do you see those fellows on the hill, Packenham? Throw your division into columns of battalions — at them directly — and drive them to the devil.' Instantly the division was formed — and the order executed admirably. . . . By this magnificent operation, the whole of the enemy's left was destroyed. Upward of 3,000 prisoners remained in the hands of the victors, while the rest, broken and dispirited, fell back in utter confusion upon the reserves, whom they swept away with them in their flight. Meanwhile, in the centre, a fiercer contest was going on. . . . Marmont, . . . struck down by the explosion of a shell, was carried off the field early in the battle, with a broken arm and two severe wounds in the side. The command then devolved upon Clausel, who did all that man in his situation could do to retrieve the fortune of the day. . . . But Lord Wellington was not to be arrested in his success, nor could his troops be restrained in their career of victory. . . . Seven thousand prisoners, two eagles, with a number of cannon and other trophies, remained in the hands of the English: 10,000 men, in addition, either died on the field or were disabled by wounds; whereas the loss on the part of the allies amounted to scarcely 5,000 men. . . . After this disaster, Clausel continued his retreat by forced marches. . . . Meanwhile, Joseph, ignorant of the result of the late battle, was on his way, with 20,000 men, to join Marmont, and had arrived at the neighbourhood of Arevolo before the intelligence of that officer's defeat was communicated to him. He directed his columns instantly toward Segovia. . . . On the 7th of August the British army moved; . . . while Joseph, retreating with precipitation, left the passes of the Guadarama open, and returned to Madrid, where the confusion was now extreme. . . . Lord Wellington's march was conducted with all the celerity and good order which distinguished every movement of his now magnificent army. On the 7th, he entered Segovia. . . . On the 12th [he] entered Madrid in triumph. . . . The city exhibited the appearance of a carnival, and the festivities were kept up till the dawn of the 13th came in. . . . Immediately the new constitution was proclaimed; Don Carlos D'Espana was appointed governor of the city, and the people, still rejoicing, yet restrained from excesses of every sort, returned to their usual employments."—Gen. Vane (Marquess of Londonderry), *Story of the Peninsular War, ch.* 30.

A. D. 1812-1814.—Final campaigns of the Peninsular War.—Expulsion of the French.— "The south and centre of Spain . . . seemed clear of enemies, but the hold of the French was as yet shaken only, not broken; for in fact though Wellington's march had forced his enemies in two directions (Clausel, with the remainder of Marmont's army, having retired north, while the king withdrew south-east), such were their numbers that each division became the centre of an army as powerful as his own. . . . Of the two armies against which Wellington had to contend by far the largest was the army of Soult

and the king, on the south-east. On the other hand, Clausel's forces were beaten and retreating, so that it appeared to the general better to leave a detachment under Hill to cover Madrid, while he himself repaired with the bulk of his army to strike a final blow at Clausel by the capture of Burgos, intending to return at once and with his whole combined forces fight a great battle with Soult and the king before the capital. . . . The resistance offered by Burgos and the deficiency of proper artillery proved greater obstacles than had been expected. The delay thus caused allowed the French to recover. . . . As Soult began to draw towards Madrid from Valencia, thus threatening the safety of Hill, there was no course left but to summon that general northward, and to make a combined retreat towards Salamanca and Portugal. . . . This was the last of Wellington's retreats. Events in Europe lessened the power of his enemies; while fighting for his very existence on the main continent of Europe, Napoleon could not but regard the war in Spain as a very secondary concern, and a great many old and valuable soldiers were withdrawn. The jealousy which existed between Joseph and the generals, and the dislike of the great generals to take upon themselves the Spanish war, threw it into inferior hands for some little while, and there is little more to chronicle than a succession of hard-won victories. . . . A vigorous insurrection had arisen all along the northern provinces; and it was this more than anything else which decided Wellington's course of action. While leaving troops to occupy the attention of the French in the valley of the Tagus, he intended to march northwards, . . . connect himself with the northern insurgents, and directly threaten the communications with France. . . . As he had expected, the French had to fall back before him; he compelled them to evacuate Burgos and attempt to defend the Ebro. Their position there was turned, and they had again to fall back into the basin of Vittoria. This is the plain of the river Zadora, which forms in its course almost a right angle at the south-west corner of the plain, which it thus surrounds on two sides. Across the plain and through Vittoria runs the high road to France, the only one in the neighbourhood sufficiently large to allow of the retreat of the French army, encumbered with all its stores and baggage, and the accumulated wealth of some years of occupation of Spain. While Wellington forced the passage of the river in front south of the great bend, and drove the enemy back to the town of Vittoria, Graham beyond the town closed this road. The beaten enemy had to retreat as best he could towards Salvatierra, leaving behind all the artillery, stores, baggage, and equipments [June 21, 1813]. The offensive armies of France had now to assume the defensive and to guard their own frontier. Before advancing to attack them in the mountains, Wellington undertook the blockade of Pampeluna and the siege of St. Sebastian. It was impossible for the French any longer to regard diplomatic or dynastic niceties. Joseph was superseded, and the defence of France intrusted to Soult, with whom the king had hopelessly quarrelled. He proved himself worthy of the charge. A series of terrible battles was fought in the Pyrenees, but one by one his positions were forced. With fearful bloodshed, St. Sebastian was taken, the Bidasoa was crossed (Oct. 7), the battle of the Nivelle fought and won (Nov. 10), and at length, in February, the lower Adour was passed, Bayonne invested, and Soult obliged to withdraw towards the east. But by this time events on the other side of France had changed the appearance of the war. . . . Napoleon was being constantly driven backward upon the east. The effect could not but be felt by the southern army, and Soult deserves great credit for the skill with which he still held at bay the victorious English. He was however defeated at Orthes (Feb. 27), lost Bordeaux (March 8), and was finally driven eastward towards Toulouse, intending to act in union with Suchet, whose army in Catalonia was as yet unbeaten. On the heights upon the east of Toulouse, for Wellington had brought his army across the Garonne, was fought, with somewhat doubtful result, the great battle of Toulouse [April 10]. The victory has been claimed by both parties; the aim of the English general was however won, the Garonne was passed, the French position taken, Toulouse evacuated and occupied by the victors. The triumph such as it was had cost the victors 7,000 or 8,000 men, a loss of life which might have been spared, for Napoleon had already abdicated, and the battle was entirely useless."—J. F. Bright, *Hist. of Eng., period* 3, *pp.* 1317–1321.

A. D. 1813-1814 (December—May).—Restoration of Ferdinand and despotic government.—Abolition of the Cortes.—Re-establishment of the Inquisition.—Hostility of the people to freedom.—"The troops of the allies in Catalonia were paralyzed, when just about to take their last measures against Suchet, and, as they hoped, drive out the last of the French from Spain. An envoy arrived from the captive Ferdinand, with the news that Ferdinand and Napoleon had made a treaty, and that the Spaniards might not fight the French any more, nor permit the English to do so on their soil. Ferdinand had been a prisoner at Valençay for five years and a half; and during that time he had, by his own account, known nothing of what was doing in Spain, but from the French newspapers. The notion uppermost in his little mind at this time appears to have been that the Cortes and the liberal party in Spain were 'Jacobins and infidels,' and that it was all-important that he should return, to restore absolutism and the Inquisition. In sending to Spain the treaty he had made with Napoleon, he took no notice whatever of the Cortes, but addressed himself solely to the Regency: and with them, his business was to consult whether he should adhere to the treaty or break through it;—which he might easily do on the plea that it was an extorted act, agreed to under deficient knowledge of the state of Spain. Thus crooked was the policy, even at the moment of restoration, of the foolish prince who seems to have had no ability for any thing but mean and petty intrigue. The terms of the treaty might easily be anticipated from the circumstances under which it was made. Napoleon wanted to shake out the British from his southwestern quarter; he was

in great need of the veteran French troops who were prisoners in Spain: and he had no longer any hope of restoring his brother Joseph. The treaty of December, 1813, therefore provided that Ferdinand and his successors should be recognised as monarchs of Spain and of the Indies: that the territory of Spain should be what it had been before the war — the French giving up any hold they had there: that Ferdinand should maintain the integrity of this territory, clearing it completely of the British: that France and Spain should ally themselves to maintain their maritime rights against England: that all the Spaniards who had adhered to King Joseph should be reinstated in whatever they had enjoyed under him: that all prisoners on both sides should immediately be sent home: and that Joseph and his wife should receive large annuities from Spain. The General of the Spanish forces in Catalonia, Copons, was in so much haste to conclude a separate armistice for himself, with Suchet, without any regard to his British comrades, that the Cortes had to act with the utmost rapidity to prevent it. Since the Cortes had invested themselves with executive, as well as legislative power, the Regency had become a mere show: and now, when the Cortes instantly quashed the treaty, the Regency followed the example. On the 8th of January, the Regency let his Majesty know how much he was beloved and desired; but also, how impossible it was to ratify any act done by him while in a state of captivity. As Napoleon could not get back his troops from Spain in this way, he tried another. He released some of Ferdinand's chief officers, and sent them to him, with advocates of his own, to arrange about an end to the war, and exchanging prisoners; and General Palafox, one of the late captives, went to Madrid, where, however, he met with no better success than his predecessor. By that time (the end of January) it was settled that the Spanish treaty, whatever it might be, was to be framed under the sanction of the Allies, at the Congress of Chatillon. With the hope of paralyzing the Spanish forces by division, Napoleon sent Ferdinand back to Spain. He went through Catalonia, and arrived in his own dominions on the 24th of March. . . . These intrigues and negotiations caused extreme vexation to Wellington. They suddenly stopped every attempt to expel the French from Catalonia, and threatened to bring into the field against him all the prisoners he had left behind him in Spain: and there was no saying how the winding-up of the war might be delayed or injured by the political quarrels which were sure to break out whenever Ferdinand and the Cortes came into collision. . . . He therefore lost no time: and the war was over before Ferdinand entered Madrid. It was on the 14th of May that he entered Madrid, his carriage drawn by the populace. As he went through the city on foot, to show his confidence, the people cheered him. They were aware of some suspicious arrests, but were willing to hope that they were merely precautionary. Then followed the complete restoration of the religious orders to the predominance which had been found intolerable before; the abolition of the Cortes; and the re-establishment of the Inquisition. The Constitution had been rejected by the King before his entry into Madrid. In a few weeks, the whole country was distracted with discontent and fear; and, in a few months, the prisons of Madrid were so overflowing with state prisoners — ninety being arrested on one September night — that convents were made into prisons for the safe-keeping of the King's enemies. Patriots were driven into the mountains, and became banditti, while Ferdinand was making arrests right and left, coercing the press, and ceremoniously conveying to the great square, to be there burned in ignominy, the registers of the proceedings of the late Cortes." —H. Martineau, *Hist. of England*, 1800–1815, *bk.* 2, *ch.* 6.—"Ferdinand was a person of narrow mind, and his heart seems to have been incapable of generous feeling; but he was not a wicked man, nor would he have been a bad King if he had met with wise ministers, and had ruled over an enlightened people. On the two important subjects of civil and religious freedom he and the great body of the nation were in perfect sympathy, — both, upon both subjects, imbued with error to the core; and the popular feeling in both cases outran his. The word Liberty ('Libertad') appeared in large bronze letters over the entrance of the Hall of the Cortes in Madrid. The people of their own impulse hurried thither to remove it. . . . The Stone of the Constitution, as it was called, was everywhere removed. . . . The people at Seville deposed all the existing authorities, elected others in their stead to all the offices which had existed under the old system, and then required those authorities to re-establish the Inquisition. In re-establishing that accursed tribunal by a formal act of government, in suppressing the freedom of the press, which had been abused to its own destruction, and in continuing to govern not merely as an absolute monarch, but as a despotic one, Ferdinand undoubtedly complied with the wishes of the Spanish nation. . . . But, in his treatment of the more conspicuous persons among the 'Liberales,' whom he condemned to strict and long imprisonment, many of them for life, he brought upon himself an indelible reproach." —R. Southey, *Hist. of the Peninsular War, ch.* 46 (*v.* 6).

A. D. 1814-1827.—The Constitution of 1812. —Abrogated by Ferdinand.— Restored by the Revolution of 1820.— Intervention of the Holy Alliance.—Absolutism and bigotry reinstated by the arms of France.—"During the war and the captivity of Ferdinand, the Cortès had, in March 1812 established a new Constitution, by which the royal authority was reduced to little more than a name. . . . Ferdinand VII., after his return, immediately applied himself to restore the ancient régime in all its unmitigated bigotry and exclusiveness. He issued decrees, in May, 1814, by which all Liberals and Freemasons, and all adherents of the Cortès, and of the officers appointed by them, were either compelled to fly, or subjected to imprisonment, or at least deposed. All national property was wrested from the purchasers of it, not only without compensation, but fines were even imposed upon the holders. All dissolved convents were re-established. The Inquisition was restored, and Mir Capillo, Bishop of Almeria, appointed Grand Inquisitor, who acted with fanatical severity, and is said to have incarcerated 50,000 persons for their opinions, many of whom were subjected to torture. . . . Ten thousand persons are computed to have fled into France. The kingdom was governed by a Camarilla, consisting of the

King's favourites, selected from the lowest and most worthless of the courtiers. . . . The French invasion of Spain had occasioned a revolution in Spanish America [see ARGENTINE REPUBLIC: A. D. 1806–1820; COLOMBIAN STATES: A. D. 1810–1819; MEXICO: A. D. 1810–1819, and 1820–1826; CHILE: A. D. 1810–1818; PERU: A. D. 1820–1826]. The loss of the American colonies, and a bad system of rural economy, by which agriculture was neglected in favour of sheep-breeding, had reduced Spain to great poverty. This state of things naturally affected the finances; the troops were left unpaid, and broke out into constant mutinies. A successful insurrection of this kind, led by Colonels Quiroga and Riego, occurred in 1820. Mina, who had distinguished himself as a guerilla leader, but, having compromised himself in a previous mutiny, had been compelled to fly into France, now recrossed the Pyrenees to aid the movement. The Constitution of 1812 was proclaimed at Saragossa; and the cowardly Ferdinand . . . was also obliged to proclaim it at Madrid, March 8th 1820. The Cortès was convened in July, when Ferdinand opened the Assembly with an hypocritical speech, remarkable for its exaggeration of Liberal sentiments. The Cortès immediately proceeded again to dissolve the convents, and even to seize the tithes of the secular clergy, on the pretext that the money was required for the necessities of the State. The Inquisition was once more abolished, the freedom of the press ordained, the right of meeting and forming clubs restored. . . . The Spanish revolutionists were divided into three parties: the Decamisados, answering to the French 'Sans-culottes'; the Communeros, who were for a moderate constitutional system; and the Anilleros, known by the symbol of a ring; who, dreading the interference of the Holy Alliance, endeavoured to conciliate the people with the crown. On the whole, the insurgents used their victory with moderation, and, with the exception of some few victims of revenge, contented themselves with depriving their opponents, the Serviles, of their places and emoluments. . . . The revolution, though originated by the soldiery, was adopted by the more educated class of citizens. On the other hand, the clergy and the peasantry were bitterly opposed to it. In the summer of 1821, guerilla bands were organised in the provinces in the cause of Church and King, and obtained the name of 'Armies of the Faith.' . . . In these civil disturbances dreadful atrocities were committed on both sides. . . . The French Government, with the ulterior design of interfering in Spanish affairs, seized the pretext of this disorder to place a cordon of troops on the Pyrenees; to which the Spaniards opposed an army of observation. Ferdinand, relying on the Army of the Faith, and on his Foreign Minister, Martinez de la Rosa, a Moderado, thought he might venture on a coup d'état before the appearance of the French; but his guards were worsted in a street fight, July 7th 1822. . . . Ferdinand was now base enough to applaud and thank the victors, to dismiss the Moderados from the Ministry, and to replace them by Exaltados, or Radicals. This state of things had attracted the attention of the Holy Alliance. In October 1822, the three northern monarchs assembled in congress at Verona, to adopt some resolution respecting Spain [see VERONA: THE CONGRESS OF]. . . . They addressed a note to the Spaniards requiring the restoration of absolutism. . . . In the spring, the French army of observation, which had been increased to 100,000 men, was placed under the command of the Duke of Angoulême." The Spanish troops "were few and ill disciplined; while in Old Castile stood guerilla bands, under the priest Merino, ready to aid the French invasion. An attempt on the part of Ferdinand to dismiss his Liberal ministry induced the ministers and the Cortès to remove him to Seville (March 20th 1823), whither the Cortès were to follow. The Duke of Angoulême addressed a proclamation to the Spaniards from Bayonne, April 2nd, in which he told them that he did not enter Spain as an enemy, but to liberate the captive King, and, in conjunction with the friends of order, to re-establish the altar and the throne. The French crossed the Bidassoa, April 7th. The only serious resistance which they experienced was from Mina [in Catalonia]. Ballasteros [in Navarre] was not strong enough to oppose them, while the traitor O'Donnell [commanding a reserve in New Castile] entered into negociations with the enemy, and opened to them the road to the capital. Ballasteros was compelled to retire into Valencia, and the French entered Madrid, May 23rd. A Regency . . . was now instituted till the King should be rescued. . . . A French corps was despatched . . . against Seville, where the Cortès had reopened their sittings; but on the advance of the French they retired to Cadiz, June 12th, taking with them the King, whom they declared of unsound mind, and a provisional Regency was appointed." The French advanced and laid siege to Cadiz, which capitulated October 1st, after a bombardment, the Cortès escaping by sea. Mina, in Catalonia, gave up resistance in November. "The Duke of Angoulême returned to Paris before the end of the year, but Spain continued to be occupied by an army of 40,000 French. The first act of Ferdinand after his release was to publish a proclamation, October 1st, revoking all that had been done since March 7th 1820. The Inquisition, indeed, was not restored; but the vengeance exercised by the secular tribunals was so atrocious that the Duke of Angoulême issued an order prohibiting arrests not sanctioned by the French commander: an act, however, which on the principle of non-interference was disavowed by the French Government. . . . It is computed that 40,000 Constitutionalists, chiefly of the educated classes, were thrown into prison. The French remained in Spain till 1827. M. Zea Bermudez, the new Minister, endeavoured to rule with moderation. But he was opposed on all sides. . . . His most dangerous enemy was the Apostolic Junta, erected in 1824 for the purpose of carrying out to its full extent, and independently of the Ministry, the victory of bigotry and absolutism." In 1825, Bermudez was driven to resign. "The Junta . . . in the spring of 1827 excited in Catalonia an insurrection of the Serviles. The insurgents styled themselves Aggraviados (aggrieved persons), because the King did not restore the Inquisition, and because he sometimes listened to his half Liberal ministers, or to the French and English ambassadors, instead of suffering the Junta to rule uncontrolled. The history of the revolt is obscure. . . . The object seems to have been to dethrone Ferdinand in favour of his brother Carlos." The insurrection

was suppressed, "the province disarmed, and many persons executed."—T. H. Dyer, *Hist. of Modern Europe, bk.* 8 (*v.* 4).

A. D. 1833.—Accession of Isabella II.

A. D. 1833-1846.—The civil war of Carlists and Christinos.—Abdication of Christina.—Regency of Espartero.—Revolution of 1843.—Accession of Queen Isabella.—Louis Philippe and his Spanish marriages.—"The eyes of King Ferdinand VII. were scarcely closed, September 29th, 1833, when the Apostolic party—whose strength lay in the north of Spain, and especially in Navarre and the Basque provinces—proclaimed his brother, Don Carlos, king under the title of Charles V. In order to offer a successful resistance to the Carlists, who were fighting for absolutism and priestcraft, there was no other course for the regent, Maria Christina, than to throw herself into the arms of the liberal party. So the seven years' war between Carlists and Christinos, from a war of succession, became a strife of principles and a war of citizens. At the outset, owing to the skill of General Zumalacarreguy, to whom the Christinos could oppose no leader of equal ability, the Carlists had the advantage in the field. Don Carlos threatened the Spanish frontiers from Portugal, where he had been living in exile with his dear nephew, Don Miguel. In this strait, Christina applied to England and France, and between those two states and Spain and Portugal was concluded the quadruple alliance of April 22d, 1834, the aim of which was to uphold the constitutional thrones of Isabella and Maria da Gloria, and to drive out the two pretenders, Carlos and Miguel. In that year both pretenders, who enjoyed to a high degree the favor of the Pope and the Eastern powers, had to leave Portugal. Carlos reached England on an English ship in June, but fled again in July, and, after an adventurous journey through France, appeared suddenly in Navarre, to inspire his followers with courage by the royal presence. The war was conducted with passion and cruelty on both sides. After the death of Zumalacarreguy at the siege of Bilbao, June 14th, 1835, the Christinos, who were superior in point of numbers, seemed to have the advantage. . . . The turning-point was reached when the command of the Christino army was committed to Espartero. In 1836 he defeated the Carlists in the murderous battle of Luchana. In 1837, when Carlos advanced into the neighborhood of Madrid, he hastened to the succor of the capital, and compelled him to retreat. To these losses were added disunion in the Carlist camp. The utterly incapable, dependent pretender was the tool of his Camarilla, which made excellence in the catechism a more important requisite for the chief command than military science, and which deposed the most capable generals to put its own creatures in command. The new commander-in-chief, Guergué, said, bluntly, to Carlos, 'We, the blockheads and ignoramuses, have yet to conduct your Majesty to Madrid; and whoever does not belong in that category is a traitor.' This Apostolic hero was defeated several times by Espartero in 1838, and the enthusiasm of the northern provinces gradually cooled down. He was deposed, and the chief command intrusted to the cunning Maroto. . . . As he [Maroto] did not succeed in winning victories over Espartero, who overmatched him, he concluded, instead, August 31st, 1839, the treaty of Vergara, in accordance with which he went over to the Christinos, with his army, and by that means obtained full amnesty, and the confirmation of the privileges of Navarre and the Basque provinces. After this, Don Carlos's cause was hopelessly lost. He fled, in September, to France, with many of his followers, and was compelled to pass six years in Bourges under police supervision. In 1845, after he had resigned his claims in favor of his eldest son, the Duke of Montemolin, he received permission to depart, and went to Italy. He died in Trieste, March 10th, 1855. His followers, under Cabrera, carried on the war for some time longer in Catalonia. But they, too, were overcome by Espartero, and in July, 1840, they fled, about 8,000 strong, to France, where they were put under surveillance. The civil war was at an end, but the strife of principles continued. Espartero, who had been made Duke of Victory (Vittoria), was the most important and popular personage in Spain, with whom the regent, as well as everybody else, had to reckon. In the mean time Christina had contrived to alienate the respect and affection of the Spaniards, both by her private life and her political conduct. Her liberal paroxysms were not serious, and gave way, as soon as the momentary need was past, to the most opposite tendency. . . . In 1836 the Progressists apprehended a reaction, and sought to anticipate it. Insurrections were organized in the larger cities, and the constitution of 1812 was made the programme of the revolt. . . . Soldiers of the guard forced their way into the palace, and compelled [Christina] to accept the constitution of 1812. A constitutional assembly undertook a revision of this, and therefrom resulted the new constitution of 1837. Christina swore to it, but hoped, by controlling the elections, to bring the Moderados into the Cortes and the ministry. When she succeeded in this, in 1840, she issued a municipal ordinance placing the appointment of the municipal authorities in the hands of the administration. This occasioned riots in Madrid and other cities; and when Christina commissioned Espartero, who was just returning victorious, to suppress the revolt in Madrid, he refused to constitute himself the tool of an unpopular policy. But he was the only man who could hold in check the revolution which threatened to break out on all sides; and so, September 16th, 1840, he had to be named minister president. . . . Under such circumstances the regency had but little charm for Christina, and there were, more-

over, other causes working with these to the same result. Soon after the death of her husband, she had bestowed her favor on a young lifeguardsman named Munoz, made him her chamberlain, and been secretly married to him. This union soon published itself in a rich blessing of offspring, but it was not until the year 1844 that her public marriage with Munoz, and his elevation to the rank of duke (of Rianzares) and grandee of Spain took place. Having by this course of life forfeited the fame of an honest woman, and exposed herself to all sorts of attacks, she preferred to leave the country. October 12th, she abdicated the regency, and journeyed to France. May 8th, 1841, the newly elected Cortes named Espartero regent of Spain, and guardian of Queen Isabella and her sister, the Infanta Luisa Fernanda. . . . Since he knew how actively Christina, supported by Louis Philippe, was working against him with gold and influence, he entered into closer relations with England, whereupon his envious foes and rivals accused him of the sale of Spanish commercial interests to England. Because he quieted rebellious Barcelona by a bombardment in 1842, he was accused of tyranny. In 1843 new insurrections broke out in the south; Colonel Prim hastened to Catalonia, and set himself at the head of the soldiers whom Christina's agents had won over by a liberal use of money; Espartero's deadliest foe, General Narvaez, landed in Valencia, and marched into Madrid at the head of the troops. Espartero, against whom Progressists and Moderados had conspired together, found himself forsaken, and embarked at Cadiz, July 26th 1843, for England, whence he did not dare to return to his own country until 1848. In November, 1843, the thirteen-year-old Isabella was declared of age. She assumed the government, made Narvaez, now Duke of Valencia, minister president, and recalled her mother. Thereby gate and doors were opened to the French influence, and the game of intrigue and reaction recommenced. In 1845 the constitution of 1837 was altered in the interests of absolutism. . . . In order to secure to his house a lasting influence in Spain, and acquire for it the reversion of the Spanish throne, Louis Philippe, in concert with Christina, effected, October 16th, 1846, the marriage of Isabella with her kinsman Francis of Assis, and of the Infanta Luisa with the Duke of Montpensier, his own youngest son. (At first his plan was to marry Isabella also to one of his sons, the Duke of Aumale, but he abandoned it on account of the energetic protest of the Palmerston cabinet, and, instead, chose for Isabella, in Francis of Assis, the person who, by reason of his mental and physical weakness, would be least likely to stand in the way of his son Montpensier.) This secretly negotiated marriage cost Louis Philippe the friendship of the English cabinet."—W. Müller, *Political Hist. of Modern Times, sect.* 9.

A. D. 1866-1873.—Vices and misgovernment of Isabella.—Revolution of 1868.—Flight of the Queen.—Constitution of 1869.—Religious toleration.—Candidates for the vacant throne.—Election of Amadeo of Italy.—Unfriendliness of the nation to him.—His abdication.—"In January, 1866, occurred an insurrection headed by General Prim, a leading officer of the army, which, failing, caused his temporary exile. In June there originated in the barrack of San Gil, a few hundred yards from the palace, a more serious revolt, which extended over a great part of Madrid. In October of the same year the Ministry, in a public proclamation, alleged as a justification for an autocratic exercise of power, that 'revolutionary tendencies constituted an imposing organism with dangerous pretensions; that a rebellion adverse to the fundamental institutions of the country and the dynasty of Isabella, such as had never been seen in Spain, had obtained possession of important municipalities, and triumphed in the deputations from all the provinces,' and that it was necessary to dissolve the municipalities and renew the provisional deputations. . . . By this arbitrary assumption Spain was under as complete a despotism as existed in the neighboring empire of Morocco. The dissatisfaction at such maladministration, such abuses in the government, and the thinly disguised immoralities of the Queen, soon found expression in audible murmurs and severe criticism. These verbal protests were followed by machinations for the overthrow or control of a sovereign subject to ambitious priests and a venal coterie. Two exiles, Marshal Serrano and Marshal Prim, united with Admiral Topete at Cadiz, and began a revolution which soon had the sympathy and co-operation of a large part of the army and the navy. A provisional revolutionary junta of forty-one persons—a few others, notably Sagasta and Martos, were afterwards added—was appointed, which signed decrees and orders having the force and effect of laws. In less than a month Francisco Serrano was authorized by the junta to form a temporary ministry to rule the country until the Cortes should meet. The defeat of the royal troops near Alcolea prevented the return of Isabella to Madrid, and on September 30, 1868, she fled across the border into France. . . . With the flight of the Queen vanished for a time the parliamentary monarchy, and, despite her impotent proclamations from France, and offers of amnesty, a provisional government was at once established. A decree of the Government to take inventories of all the libraries, collections of manuscripts, works of art, or objects of historical value—a measure necessary to make useful and available these treasures, and to prevent spoliation and transfer—was peacefully executed except at Burgos. Here, under instigation of the priests and aided by them, a mob assembled, broke down the doors of the cathedral, assassinated the Governor, wounded the chief of police, and expelled those engaged in making the required examination and inventory. This outbreak, attributed to a clerical and Carlist conspiracy, awakened opposition and horror. A strong pressure was created for the immediate establishment of freedom of

worship. The atrocious butchery at Burgos aroused the inhabitants of the capital. The Nuncio was so imperilled by the excited populace that the diplomatic corps interposed for the safety and protection of their colleague. Marshal Serrano quieted the angry multitude gathered at his residence by saying that the Government had prepared the project of a constitution to be submitted to the Constitutional Assembly, one of whose first articles was liberty of worship. On February 12, 1869, the Constitutional Cortes convoked by the Provisional Government, assembled with unusual pomp and ceremony and with striking demonstrations of popular enthusiasm. . . . The Republicans, among whom the eloquent Castelar was influential, were a compact phalanx, and to them the independent Progresistas, led by General Prim, made overtures which were accepted. On Sunday June 5, 1869, the Constitution was promulgated. . . . While recognizing the provinces and endowing them with important functions, the Cortes rejected the plan of a federal republic, and adhered to the monarchical form of government as corresponding with and a concession to Spanish traditions, and as most likely to secure a larger measure of the liberal principles of the revolution. The Constitution, the legitimate outgrowth of that popular uprising, recognized the natural and inherent rights of man, and established an elective monarchy. . . . Congress was chosen by universal suffrage. The provincial assemblies and the municipal authorities were elected by the people of their respective localities. The ancient privileges of the aristocracy were annulled, and the equality of all men before the law was recognized. . . . The Clerical party claimed the continued maintenance of the Roman Catholic Church and the exclusion of all other worship, but the country had outgrown such intolerance. . . . The Catholic form of faith was retained in the organic law as the religion of the State, but a larger liberty of worship was secured to the people. In Article XXI. the Catholic Apostolic Roman religion was declared the State religion, and the obligation to maintain its worship and ministers was imposed. Foreigners were granted toleration for public and private worship under the limitations of the universal rules of morals and right, and Spaniards, even, professing another than the Catholic religion were to have the like toleration. . . . Spain quietly passed from the anomalous condition of a provisional into a regular constitutional government, the title of Provisional Government having been changed to that of Executive Power. In June a regency was established, and Serrano was chosen by a vote of 193 to 45. From June 16, 1869, the date of Prim's first cabinet, until December 27, 1870, when he was shot [as he rode through the street, by assassins, who escaped], he had four separate ministries besides several changes of individual ministers; and this instability is characteristic of Spanish politics. . . . For the vacant throne some Spaniards turned to the Duke of Montpensier; some to the Court of Portugal, and in default thereof to the house of Savoy. . . . At the moment of greatest embarrassment, the candidature of Leopold, Prince of Hohenzollern, was proposed [— a proposal which led to the Franco-German war: see FRANCE: A. D. 1870 (JUNE — JULY)]. . . . Leopold's declension was a welcome relief. His candidacy being removed, the strife for the throne became fiercer. On November 3, 1870, General Prim announced to the Cortes the Duke of Aosta, son of Victor Emmanuel, as the Ministerial candidate for the crown. Castelar impetuously denounced the attempt to put a foreigner over Spaniards. On the 15th, Amadeo was elected king, receiving on a vote by ballot a majority of seventy-one of those present and a majority of eighteen in a full house. . . . The choice excited no enthusiasm, elicited no applause, nor was a viva given by the multitude outside the building where the Cortes had made a sovereign. Thirty thousand troops, discreetly posted in principal thoroughfares, prevented any hostile demonstration, and the leading Republicans, Figueras, Castelar, and Piyy Margall, advised against any acts of violence. Many journals condemned the Cortes. Grandees protested, placards caricatured and ridiculed. . . . Nevertheless, Zorrilla went to Italy to make the formal tender of the crown, and on January 2, 1871, the prince reached Madrid and took the prescribed oaths of office in the presence of the regent, the Cortes, and the diplomatic corps. The ceremony was brief and simple. The reception by the populace was respectful and cold. The Provisional Government resigned, and a new ministry was appointed, embracing such men as Serrano, Martos, Moret, Sagasta, and Zorrilla. . . . Amadeo never had the friendship of the Carlists nor of the simon-pure Monarchists. The dynasty was offensive to the adherents of Don Carlos and of Alfonso, and to the Republicans, who were opposed to any king. . . . Becoming [after two years] convinced that the Opposition was irreconcilable, that factions were inevitable, that a stable ministry was impossible, Amadeo resolved on the singular course of abdicating the royal authority, and returning to the nation the powers with which he had been intrusted;" and this abdication he performed on the 11th of February, 1873.—J. L. M. Curry, *Constitutional Government in Spain, ch.* 3–4.

A. D. 1873-1885.—Reign of Alphonso XII., son of Queen Isabella.—On the abdication of King Amadeo, "a republic was declared by the Cortes, and the gifted and eminent statesman, Castelar, strove to give it a constitutional and conservative character. But during the disorders of the last few years the Basque provinces of Navarre and Biscay had been in a ferment excited by the Carlists. The grandson of the Don Carlos who had troubled Spain from 1833 to 1839 appeared in those provinces which were still favourable to his cause, and this ardent young champion of divine right of course received the support of French legitimists. On the other hand, the doctrines of the Paris Commune had found in the south of Spain many adherents, who desired that their country should form a federation of provincial republics. Malaga, Seville, Cadiz, Cartagena, and Valencia revolted, and were reduced only after sharp fighting. A group of generals then determined to offer the crown to Alphonso, the young son of Isabella II, in whose favour she had abdicated in 1868. Castelar, the moderate republican statesman, reluctantly consented, and young Alphonso XII, on landing in Spain, 1874, received the support of most republicans and Carlists, disgusted by the excesses of their extreme partisans. His generals gradually hemmed

in the Carlists along the north coast by battles near Bilbao and Irun; and when the rebels shot a German subject Prince Bismarck sent German ships to aid the Alphonsists. These in the spring of 1876 forced Don Carlos and most of his supporters to cross the French frontier. The Madrid Government now determined to put an end to the fueros or local privileges of the Basque provinces, which they had misused in openly preparing this revolt. So Biscay and Navarre henceforth contributed to the general war expenses of Spain, and their conscripts were incorporated with the regular army of Spain. Thus the last municipal and provincial privileges of the old Kingdom of Navarre vanished, and national unity became more complete in Spain, as in every other country of Europe except Austria and Turkey. The Basque provinces resisted the change which placed them on a level with the rest of Spain, and have not yet become reconciled to the Madrid Government. The young King, Alphonso XII, had many other difficulties to meet. The government was disorganised, the treasury empty, and the country nearly ruined; but he had a trusty adviser in Canovas del Castillo, a man of great prudence and talent, who, whether prime minister or out of office, has really held power in his hands. He succeeded in unifying the public debt, and by lowering its rate of interest he averted State bankruptcy. He also strove to free the administration from the habits of bribe-taking which had long enfeebled and disgraced it; but in this he met with less success, as also in striving for purity of parliamentary election. . . . The Senate is composed of (1) nobles, (2) deputies elected by the corporations and wealthy classes, and (3) of life senators appointed by the crown. The Chamber of Deputies is elected by universal suffrage, one deputy for every 50,000 inhabitants. The king or either House of Parliament has the right of proposing laws. In 1883 King Alphonso paid a visit to Berlin, and was made honorary colonel of a Uhlan regiment. For this he was hooted and threatened by the Parisians on his visit to the French capital; and this reception increased the coldness of Spain toward the French, who had aggrieved their southern neighbour by designs on Morocco. The good understanding between Spain and Germany was overclouded by a dispute about the Caroline Islands in the Pacific, which Spain rightly regarded as her own. This aggravated an illness of Alphonso, who died suddenly (November 25, 1885). His young widow, as queen-regent for her infant child, has hitherto [1889] succeeded with marvellous tact."—J. H. Rose, *A Century of Continental History, ch.* 43.

SPANISH COINS.—"The early chroniclers make their reckonings of values under different names at different times. Thus during the discoveries of Columbus we hear of little else but 'maravedis'; then the 'peso de oro' takes the lead, together with the 'castellano'; all along 'marco' and 'ducado' being occasionally used. At the beginning of the 16th century, and before and after, Spanish values were reckoned from a mark of silver, which was the standard. A mark was half a pound either of gold or silver. The gold mark was divided into 50 castellanos; the silver mark into eight ounces. In the reign of Ferdinand and Isabella the mark was divided by law into 65 'reales de vellon' of 34 maravedis each, making 2,210 maravedis in a mark. . . . In the reign of Alfonso XI., 1312–1350, there were 125 maravedis to the mark, while in the reign of Ferdinand VII., 1808–1833, a mark was

divided into 5,440 maravedis. In Spanish America a 'real' is one-eighth of a 'peso,' and equal to 2¼ reales de vellon. The peso contains one ounce of silver; it was formerly called 'peso de ocho reales de plata,' whence came the term 'pieces of eight,' a vulgarism at one time in vogue among the merchants and buccaneers in the West Indies. . . . The castellano, the one fiftieth of the golden mark, in the reign of Ferdinand and Isabella, was equivalent to 490 maravedis of that day. The 'peso de oro,' according to Oviedo, was exactly equivalent to the castellano, and either was one third greater than the ducado or ducat. The 'doblon'. . . was first struck by Ferdinand and Isabella as a gold coin of the weight of two castellanos. The modern doubloon is an ounce of coined gold, and is worth 16 pesos fuertes. Reduced to United States currency, the peso fuerte, as slightly alloyed bullion, is in weight nearly enough equivalent to one dollar. Therefore a mark of silver is equal to 8 dollars; a piece of eight, equal to one peso, which equals one dollar; a real de vellon, 5 cents; a Spanish-American real, 12½ cents; a maravedi, $\frac{100}{1776}$ of a cent; a castellano, or peso de oro $2.56; a doubloon $5.14; a ducat, $1.92; a mark of gold $128, assuming the United States alloy. The fact that a castellano was equivalent to only 490 maravedis shows the exceedingly high value of silver as compared with gold at the period in question."—H. H. SPARTA: The City.—Its situation, origin and growth.—Laconia.—"Hollow Lacedæmon."—"Laconia is formed by two mountain-chains running immediately from Arcadia [from the center to the southeastern extremity of Peloponnesus], and enclosing the river Eurotas, whose source is separated from that of an Arcadian stream by a very trifling elevation. The Eurotas is, for some way below the city of Sparta, a rapid mountain-stream; then, after forming a cascade, it stagnates into a morass; but lower down it passes over a firm soil in a gentle and direct course. Near the town of Sparta rocks and hills approach the banks on both sides, and almost entirely shut in the river both above and below the town: this enclosed plain is without doubt the 'hollow Lacedæmon' of Homer."—C. O. Müller, *Hist. and Antiq. of the Doric Race, bk.* 1, *ch.* 4.—Upon the Dorian invasion and occupation of Peloponnesus (see DORIANS AND IONIANS) the city and neighborhood of Sparta in Laconia,—i. e. Sparta and 'hollow Lacedæmon,'—became the seat of the dominant state which they founded in the peninsula. The conquerors, themselves, and their descendants, were the only full citizens of this Spartan state and were called Spartiatæ or Spartans. The prior inhabitants of the country were reduced to political dependence, in a class called the Periœci, or else to actual serfdom in the more degraded class known as Helots. "Sparta was not, like other towns of the Greeks, composed of a solid body of houses, but, originally in a rural and open situation on the river and its canals, it gradually stretched out into the open country, and Dorians lived far beyond Sparta along the entire valley, without the inhabitants of remoter points being on that account in any less degree citizens of Sparta than those dwelling by the ford of the Eurotas. They were all Spartans, as by a stricter term they were called, as distinguished from the Lacedæmonians. . . . Strictly apart from this exclusive community of Spartiatæ there remained, with its ancient conditions of life intact, the older population of the land, which dwelt scattered on the mountains surrounding the land of the Spartiatæ on all sides (hence called the dwellers-around, or Periœci). More than trebling the Spartiatæ in number, they cultivated the incomparably less remunerative arable land of the mountains, the precipitous declivities of which they made available by means of terraced walls for cornfields and vineyards. . . . Free proprietors on their own holdings, they, according to primitive custom, offered their tribute to the kings. The country people, on the other hand, residing on the fields of the Spartiatæ, met with a harder fate. Part of them probably consisted of peasants on the domains; others had been conquered in the course of internal feuds. They were left on the fields which had been once their own, on the condition of handing over to the Spartiatæ quartered upon them an important portion of their produce. This oppression provoked several risings; and we must assume that the ancient sea-town of Helos was for a time the centre of one of these outbreaks. For this is the only admissible explanation of the opinion universally prevailing among the ancients, that from that town is derived the name of the Helots."—E. Curtius, *Hist. of Greece, v.* 1, *bk.* 2, *ch.* 1.

ALSO IN: G. F. Schömann, *Antiq. of Greece: The State, pt.* 3, *ch.* 1.

The Constitution ascribed to Lycurgus.—"Sparta was the city from which the Dorians slowly extended their dominion over a considerable portion of Peloponnesus. Of the progress of her power we have only the most meagre information. . . . The internal condition of Sparta at this early period is uniformly

described as one of strife and bad government, a condition of affairs which was certainly unfavourable to external development and conquest. Herodotus attributes these dissensions, at least in part, to the mutual animosity of the two royal families; the twin sons of Aristodemus quarrelled all their lives, and their descendants after them did the same. Plutarch, on the other hand, speaks of quarrels between the kings and the people. . . . Whatever the cause, it is more certain than any other fact in early Spartan history that the condition of the country was for a long time one of internal strife and dissension. It was the great merit of Lycurgus to have put an end to this disastrous state of affairs. Lycurgus is the foremost name in Spartan history. Tradition is nearly unanimous in describing this lawgiver as the author of the prosperity of Sparta, and the founder of her peculiar institutions, but about the date and the events of his life the greatest uncertainty prevailed. . . . Thucydides, though he does not mention Lycurgus, asserts that the form of the government had continued the same in Sparta for more than four hundred years before the end of the Peloponnesian war. In his opinion, therefore, the reforms of Lycurgus were introduced shortly before 804 B. C. This date is considerably later than that usually given to Lycurgus, on the authority of the ancient chronologers. . . . Herodotus tells us that Lycurgus, when visiting the Delphic shrine, was hailed by the priestess as a being more than human, and some authorities asserted that the Spartan institutions were revealed to him there. The Lacedaemonians, however, regarded Crete as the source of their peculiar arrangements [see CRETE]. They were thus enabled to connect them with the great name of Minos, and derive their authority from Zeus himself. . . . Plutarch has fortunately transcribed the text of the Rhetrae, or ordinances, which were given to Lycurgus at Delphi. There does not seem to be any reason to doubt that these were the oldest ordinances known at Sparta, or that they formed the basis of their 'good government.' They were therefore the oldest political ordinances known in Hellas, and, indeed, in the world. 'Found a temple to Zeus Hellanius, and Athena Hellania, arrange the tribes, and the Obes, thirty in number, establish the Gerousia with the Archagetae. Summon the people for meeting from time to time between Babyca and the Cnacion, there bring forward and decide (reject). The people are to have the supreme power.' Thus the first duty of the lawgiver was to found a public sanctuary which should be as it were the centre of the community. Then the people were to be arranged in tribes and Obes. The division into tribes was not a new one; from the first the Dorians at Sparta, as elsewhere, when free from the admixture of external elements, were divided into three tribes, Hylleis, Dymanes, Pamphyli, but it is possible that some changes were now introduced, regulating the internal arrangement of the tribe. In each tribe were ten Obes, of which we know nothing beyond the name. They appear to have been local divisions. As the Gerousia [see GERUSIA], including the kings, contained thirty members, we may conjecture that each Obe was represented in the Senate, and therefore that the two kings were the representatives of two distinct Obes. The Archagetae are the kings, or leaders of the people. From time to time the community were to be summoned to a meeting. . . . Before the assembled people measures were to be introduced that they might decide upon them, for no measure was valid which had not received the sanction of the whole people. The elements with which these ordinances deal — the Kings, the Council and the Assembly — appear in the Homeric poems, and grew naturally out of the patriarchal government of the tribe. The work of Lycurgus did not consist in creating new elements, but in consolidating those which already existed into a harmonious whole. . . . Three other ordinances which are ascribed to Lycurgus forbade (1) the use of written laws; (2) the use of any tools but the axe and saw in building a house; (3) frequent wars upon the same enemies. He is also said to have forbidden the use of coined money in Sparta. Neither gold nor silver was to be used for purposes of exchange, but bars of iron, which by their small value and great bulk rendered money dealings on any large scale impossible. The iron of these bars was also made unusually brittle in order that it might be useless for ordinary purposes. Such precepts were doubtless observed at Sparta, though they may not have been derived from Lycurgus. The training which every Spartan underwent was intended to diminish the sphere of positive law as much as possible, and to encourage the utmost simplicity and even rudeness of life. . . . About a century after Lycurgus, in the reign of Theopompus, two changes of great importance were made in the Spartan constitution. The veto which the earlier rhetra had allowed to the assembled people was cancelled, and a new law was introduced, which gave the ultimate control to the Gerontes and Kings. 'If the people decide crookedly, the elders and chiefs shall put it back,' i. e. shall reverse the popular decision. Under what circumstances this ordinance, which is said to have been obtained from Delphi, was passed, we do not know, nor is it quite clear how it consists with what we find recorded of the constitutional history of Sparta in later times. . . . The second innovation was even more important. Though Herodotus ascribes the institution of the Ephoralty [see EPHORS] to Lycurgus, it seems more correct to follow Aristotle and others in ascribing it to Theopompus. The Ephors, who were five in number, appear in the first instance to have been of no great importance. But as they were intimately connected with the commons, elected from and by them as their representatives, we must assume that the ephoralty was a concession to the people, and it may have been a compensation for the loss of the right of voting in the assembly. In time the ephors grew to be the most important officers in the state, both in war and in peace. They were associated with the council, they presided in the assembly, and even the kings were not exempt from their power. To this result the growing dread of 'a tyrannis,' like that at Corinth or Sicyon, and the increasing importance of the Spartan training, which the ephors superintended, in a great measure contributed. . . . The kings were the leaders of the army. For a time they always took the field together, but owing to the dissensions of Cleomenes and Demaratus, a law was passed that one king only should go out with the army, and it was henceforth the custom for one king only to be absent from Sparta, at a

time. The kings had the right of making war on whom they would, and no one could prevent them, on pain of being under a curse, but as they were liable to be brought to trial on their return for failure in an expedition, they usually obtained the consent of the ephors or the assembly before going. . . . The origin of the dual monarchy, which from the first was so distinctive a feature of the Spartan government, is very obscure, and many attempts have been made to explain it. It may have arisen by a fusion of the native and immigrant races, each of which was allowed to retain its own prince in the new community. . . . It is perhaps more reasonable to assume that the two kings represent two leading families, each of which had a claim to give a chief to the community. That two families holding equal rights should be regarded as descended from the twin sons of the Dorian founder of Sparta is merely one of the fictions which of necessity arose in the period when all political unions and arrangements were expressed in the terms of genealogical connection. . . . The Apella was an assembly of all the Spartan citizens who had reached the age of thirty years. . . . In historical times it was presided over by the ephors. No speaking was allowed except by officers of State and persons duly invited, and perhaps the Senators. The votes were given by acclamation. The assembly decided on war and peace, treaties, and foreign politics generally; it elected the ephors and gerontes. . . . More important for the development of Sparta than her political constitution was the education and training which her citizens received. . . . The Spartan did not exist for himself but for his city; for her service he was trained from birth, and the most intimate relations of his life were brought under her control. In the secluded valley of the Eurotas, where till the time of Epaminondas no invader ever set foot, amid profound peace, he nevertheless led the life of a warrior in the field. His strength and endurance were tested to the utmost; he was not permitted to surrender himself to the charm of family life and domestic affections. Even when allowed to marry, he spent but little time at home; his children, if thought worthy of life, were taken from him at an early age to go through the same training in which he himself had been brought up. Only when he reached the age of sixty years, at which he could no longer serve his country in the field, was he permitted to enjoy the feeling of personal freedom."—E. Abbott, *Hist. of Greece, pt.* 1, *ch.* 6.

Also in: G. Grote, *Hist. of Greece, pt.* 2, *ch.* 6.—G. W. Cox, *Hist. of Greece, bk.* 1, *ch.* 5.—C. O. Müller, *Hist. and Antiquities of the Doric Race, bk.* 3 (*v.* 2).

B. C. 743-510.—The First and Second Messenian Wars.—Military supremacy in Peloponnesus established.—"The effect of the Lycurgean institutions was to weld the people of Sparta into what Grote well denominates a 'military brotherhood'—the most potent military machine which at that time, and for long after, existed in Greece or in the world. Had their political ambition and ability been proportionate, it is difficult to doubt that the Lacedæmonians might have anticipated the career of the Romans; but their inability to produce really great statesmen, and the iron rigidity of their political system, placed in their path effectual barriers to the attainment of such grandeur. . . . The first object of their attacks was the neighbouring Dorian kingdom of Messenia. The kinship between the two peoples and their rulers had previously kept them on friendly terms. It was symbolized and expressed by joint sacrifices, annually celebrated at a temple in honour of Artemis which stood on the borders between the two countries, near the source of the river Neda. It was a quarrel that broke out at these annual rites which led to the outbreak of the first Messenian war, about 743 B. C. The circumstances of the quarrel were differently related by the two parties; but it resulted in the death of Teleclus, one of the Spartan kings. His subjects invaded Messenia to obtain redress. At first the struggle was of an indecisive character, but ultimately the Messenians were obliged to take refuge on the fortified mountain of Ithome, and all the rest of their country was overrun and conquered by their persistent enemies. After the war had lasted twenty years, the Messenian garrison was compelled to abandon Ithome, the fortifications of which were razed by the Spartans, and Messenia became part of the Lacedæmonian territory, —all its inhabitants who refused to submit being driven into exile. Pausanius and other ancient writers give long details of the events of this twenty years' struggle, the great hero of which was the Messenian king Aristomenes; but these details are as legendary as the exploits of the Homeric heroes, and all that is certainly known about the war is that it ended in the subjugation of Messenia. The severity and oppression with which the conquered people were ruled led them, about forty years later, to rise up in revolt, and another struggle of seventeen years' duration followed. In this, again, Aristomenes is represented as the Messenian leader, although he had put an end to his own life at the unsuccessful close of the former contest; and the later Hellenic writers tried to get over this impossibility by declaring that the Aristomenes of the second war must have been a descendant of the earlier hero bearing the same name. In the course of the war the Spartans suffered severely, as the Messenians had the support of other Peloponnesian communities — especially the Arcadians — who had begun to dread the strength and arrogance of the Lacedæmonians. Ultimately, however, the revolt was crushed, and from that time till the days of Epaminondas, Messenia remained a part of the Laconian territory [see Messenian Wars, First and Second]. To Sparta it was an important acquisition, for the plain of the Pamisus was the most fertile district in Peloponnesus. The Spartans next became aggressive on the eastern and northern frontiers of their territory. Among the numerous independent communities of Arcadia, the two most important were Tegea and Mantinea, in the extreme east of the Arcadian territory. With these cities, especially the former, the Spartans had some severe struggles, but were not able to conquer them, though they established a dominant influence, and reduced them to the position of dependent allies. From Argos . . . the Lacedæmonians wrested, in the course of two centuries, the strip of territory between the Parnon range and the sea from Thyrea down to the Malean promontory. By the beginning of the 6th century B. C. they were masters of two-fifths of the whole area of Peloponnesus — a

territory of something more than 3,000 square miles. To modern notions, such a territory, which is smaller in extent than more than one Scottish county, seems utterly insignificant; but it sufficed to make Sparta the largest and strongest state in Hellas, and even at the pinnacle of her power she never made any further addition to her possessions in Peloponnesus. Protected from invasion by impregnable natural defences, and possessing a military discipline, a social and political unity, such as no other Grecian community could boast, the Lacedæmonians possessed peculiar advantages in the competition for the Hellenic leadership. . . . It was about the close of the 6th century B. C. that Sparta, having asserted her supremacy in Peloponnesus, began to take an active part in the affairs of the Hellenic communities outside the peninsula. . . . In 510 B. C. her king, Cleomenes, went to Athens at the head of a large force to obey the mandate of the Delphic oracle and 'liberate the city' by the expulsion of the Pisistratids."—C. H. Hanson, *The Land of Greece, ch.* 11.

B. C. 404.— End of the Peloponnesian War: Surrender of Athens. See ATHENS: B. C. 404.

B. C. 404-403.— The organizing of Spartan supremacy.—The Harmosts in power.— The overthrow of Athenian power in the Greek world, made final by the battle of Ægospotami, B. C. 405, rendered Sparta supreme, and established her in a sovereignty of affairs which is often alluded to as the Spartan, or Lacedæmonian Empire. The cities which had been either allied or subject to Athens were now submissive to the Spartan conqueror, Lysander. "He availed himself of his strength to dissolve the popular system of government in all the towns which had belonged to the Attic confederation, and to commit the government to a fixed body of men enjoying his confidence. As at Athens the Thirty

[see ATHENS: B. C. 404–403], so elsewhere Commissions of Ten [called Dekarchies] were established; and in order to give security and strength to those governing bodies, detachments of Spartan troops were placed by their side, under the command of a Harmost. This measure, again, was, by no means a novel invention. From an early period the Lacedæmonians had been in the habit of despatching Harmostæ (i. e. military governors) into the rural districts, to hold sway over the Perioeci, and to keep the latter in strict subjection to the capital. Such Harmosts were subsequently also sent abroad; and this, of itself, showed how the Spartans had no intention of recognizing various kinds of subjection, and how they at bottom designed to make no essential difference between subject rural communities in Laconia and the foreign towns which had of their own accord, or otherwise, submitted to the power of Sparta. The duration of the Harmosts' tenure of office was not defined."—E. Curtius, *Hist. of Greece, bk.* 5, *ch.* 1 (*v.* 4).

B. C. 353-337.—Independent attitude towards Philip of Macedon. See GREECE: B. C. 357–336.

B. C. 317.—Building of Walls.—It was not until about the year 317 B. C., during the distractions which followed the death of Alexander the Great, that walls were built around the city of Sparta. "The maintenance of Sparta as an unwalled city was one of the deepest and most cherished of the Lykurgean traditions; a standing proof of the fearless bearing and self-confidence of the Spartans against dangers from without. The erection of the walls showed their own conviction, but too well borne out by the real circumstances around them, that the pressure of the foreigner had become so overwhelming as not to leave them even safety at home."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 96.

B. C. 272.—Siege by Pyrrhus.—Not many years after the walls of Sparta were first built the city was subjected to a siege by Pyrrhus, the ambitious Epirotic king. There were two claimants to the Spartan crown, and Pyrrhus, espousing the cause of the unsuccessful one, marched into Peloponnesus with a powerful army, (B. C. 272) and assailed the Lacedæmonian capital. He was repulsed and repulsed again, and gave up the attempt at last, marching away to Argos, where his interference in local quarrels had been solicited. He perished there, ignominiously, in another abortive enterprise, being killed by a tile flung down by a woman's hand, from a housetop overlooking the street in which he was attempting to manage the retreat of his discomfited forces.—C. Thirlwall, *Hist. of Greece, ch.* 60.—See MACEDONIA, &c.: B. C. 277–244.

SPARTACUS, The Rising of.—Schools for the training of gladiators, to supply the barbarous amusement which the Romans delighted in, were numerous at Rome and throughout Italy. The men placed in these schools were slaves, criminal prisoners, or unfortunates whose parents abandoned them in infancy. As a rule, they were forced into the brutal profession and the schools which trained them for it were places of confinement and restraint. From one of these schools, at Capua, some seventy or more gladiators escaped, in the year 73 B. C., and fled to the mountains. They had for their leader a Thracian, named Spartacus, who proved to be a soldier of remarkable ability and energy. Stationing himself at first on Mount Vesuvius, Spartacus was joined by other slaves and fugitives, until he had a large force under his command. Again and again the Roman armies sent against him were defeated and the insurgents equipped themselves with captured arms. Nola, Nuceria, and other towns in Southern Italy fell into their hands. In the year 72 they moved toward North Italy, routing two consular armies on their way, and were thought to be intending to escape beyond the Alps; but, after another great victory at Mutina (Modena) over the proconsul of Gallia Cisalpina, Spartacus turned southward again, for some unexplained reason, and allowed himself to be blockaded in the extremity of Lucania, by M. Licinius Crassus. In this situation he sought to make terms, but his proposals were rejected. He then succeeded in breaking through the Roman lines, but was pursued by Crassus and overwhelmingly defeated at Mount Calamatius, where 35,000 of the insurgents are said to have been slain. The flying remnant was again brought to bay near Petilia, in Bruttium, and there Spartacus ended his life. A few thousand of the insurgents who escaped from the field were intercepted by Pompey and cut to pieces, while 6,000 captives were crucified, with Roman brutality, along the road between Capua and Rome.—G. Long, *Decline of the Roman Republic, v.* 3, *ch.* 2.—See, also, ROME: B. C. 78–68.

SPEAKER OF THE HOUSE OF COMMONS.—"The splendor of the position of Speaker of the British House of Commons is perhaps not generally realized. The appointment, nominally for the duration of but one Parliament, generally extends over several. . . . Chosen from among the members, subject to the approval of the Crown, the Speaker can be re-

moved only upon an address to the Crown. Besides a palatial residence occupying one wing of the Houses of Parliament, and a large patronage, he receives a salary of £5,000 a year. At the end of his labors he is rewarded with a peerage and a pension of £4,000 per annum for two lives. He is a member of the Privy Council, and the first gentleman in the United Kingdom, taking rank after barons. . . . The wig and gown which he wears, the state and ceremony with which he is surrounded, doubtless contribute to the isolation and impressiveness of his position. . . . When, at the opening of proceedings, he makes his way in state from his residence to the Chamber, through the corridors used by members for passing to the committee, library, and refreshment rooms, it is against etiquette for any one to be found therein. When on summer evenings he and his family take the air upon the portion of the terrace which is outside his residence, there is no more thought of approaching them than there would be if he were a Grand Lama. When in the chair, he can be approached only upon strictly business matters. His levees, held twice a year and open to all members, can be attended only in court costume, sword by the side."—*The Nation, Aug.* 17, 1893 (*p.* 117).

SPHINX, The.—"About six hundred yards to the S. E. of the Great Pyramid is the Sphinx. The Sphinx is a natural rock, to which has been given, more or less accurately, the external appearance of that mystic animal. The head alone has been sculptured. The body is formed of the rock itself, supplemented, where defective, by a somewhat clumsy masonry of limestone. The total height of the monument is 19 metres 80 centimetres, equal to 65 English feet. The ear measures 6 feet 5 inches; the nose 5 feet 10 inches; and the mouth 7 feet 8 inches. The face, in its widest part, across the cheek, is 4 metres 15 centimetres, that is, 13 feet 7 inches. Its origin is still a matter of doubt. At one time it was supposed to be a monument of the reign of Thothmes IV. (XVIIIth dynasty). But we know now, thanks to a stone in the Boulak Museum, that the Sphinx was already in existence when Cheops (who preceded Chephren) gave orders for the repairs which this stone commemorates. It must also be remembered that the Sphinx is the colossal image of an Egyptian god called Armachis."—A. Mariette, *Monuments of Upper Egypt, p.* 70.

STALLER AND HORDERE, The.—"In the time of Ælfred [Alfred the Great] the great officers of the court were the four heads of the royal household, the Hordere, the Staller, the Dish-thegn, and the Cup-thegn. . . . The Hordere was the officer of the court in its stationery aspect, as the Staller or Constable was of the court on progress. . . . Of the four officers one only retained under the later West-Saxon monarchy any real power. The dish-thegn and cup-thegn lost importance as the court became stationary and no longer maintained a vast body of royal followers. The staller retained only the functions of leading in war as the feudal constable, which in turn passed away with later changes in the military system. The hordere alone held a position of growing importance. . . . No doubt the 'Hoard' contained not only money and coin, but the costly ornaments and robes of the crown."—J. R. Green, *Conquest of Eng., ch.* 10, *note.*—"The names by which the Chamberlain was designated are Hrægel thegn, literally thane or servant of the wardrobe, Cubicularius, Camerarius, Búrthegn, perhaps sometimes Dispensator, and Thesaurarius or Hordere. . . . We may presume that he had the general management of the royal property, as well as the immediate regulation of the household. . . . The Marshal (among the Franks Marescalcus and Comes stabuli) was properly speaking the Master of the Horse. . . . The Anglosaxon titles are Steallere [Staller] and Horsthegn, Stabulator and Strator regis."—J. M. Kemble, *The Saxons in Eng., bk.* 2, *ch.* 3.—See, also, CONSTABLE.

STALWARTS AND HALF-BREEDS.—During the administration of President Grant, certain leaders of the Republican party in the United States—conspicuous among them Senator Conkling of New York—acquired a control of the distribution of appointed offices under the Federal Government which gave them a more despotic control of the organization of their party than had been known before in the history of the country. It was the culminating development of the "spoils system" in American politics. It produced a state of things in which the organization of the party—its elaborated structure of committees and conventions—state, county, city, town and district,—became what was accurately described as a "political machine." The managers and workers of the machine were brought under a discipline which allowed no room for personal opinions of any kind; the passive adherents of the party were expected to accept what was offered to them, whether in the way of candidates or declarations of principle. The faction which controlled and supported this powerful machine in politics acquired the name of Stalwarts and contemptuously gave the name of Half-breeds to their dissatisfied Republican opponents. During the term of President Hayes, who favored Civil Service Reform, the Stalwarts were considerably checked. They had desired to nominate General Grant in 1876 for a third term, but found it unwise to press the proposition. In 1880, however, they rallied all their strength to accomplish the nomination of Grant at Chicago and were bitterly enraged when their opponents in the convention carried the nomination of Garfield. They joined in electing him, but Conkling, the Stalwart leader, speedily quarreled with the new President when denied the control of the Federal "patronage" (that is, official appointments) in New York State, resigned from the Senate, appealed to the New York Legislature for re-election, and was beaten. Then followed the tragedy of the assassination of President Garfield, which had a very sobering effect on the angry politics of the time. Conkling disappeared from public life, and Stalwartism subsided with him.—J. C. Ridpath, *Life and Work of James A. Garfield, ch.* 10–12.

STAMBOUL.—"It must be remembered that the Constantinople of 1200 was only that portion which is now called Stamboul or Istamboul, a word which is probably the Turkish abbreviation of Constantinople, just as Skenderoun is the abbreviation of Alexandretta, Skender bey for Alexander bey, Isnik for Nicæa, Ismidt for Nicomedia, &c. . . . The 'Itinerario' of Clavigo states that before the Moslem occupation the inhabitants themselves called the city Escomboli. The Turks allow a few foreigners to have their warehouses in Stamboul, but will not permit them to reside there. All the embassies and legations are in Pera, that is, across the water; . . . or at Galata, which is a part of what was originally called Pera."—E. Pears, *The Fall of Constantinople, ch.* 7, *foot-note.*

STAMP ACT, The. See UNITED STATES OF AM.: A. D. 1765; and 1766.

STANDARD, The Battle of the (1138).—In the civil war which arose in England, on the death of Henry I., over the disputed succession to the throne, Matilda's claims, as the daughter of Henry, were supported against Stephen of Blois by her mother's brother David, king of Scotland. David, as the nephew of Edgar Ætheling, heir of the dethroned Saxon royal house, had some claims of his own to the English crown; but these he declared that he waived in favor of his niece. "Though he himself declared that he had no desire for the English throne, there is mentioned by one chronicler a general conspiracy of the native English with their exiled country-men, of whom the south of Scotland was full, for the purpose of taking advantage of the condition of the country to put to death the Normans, and to place the crown upon David's head. The plot was discovered, . . . and many of the conspirators were hanged, but many others found a refuge in Scotland. At length, in 1138, David entered England with a large army, and pushed forward as far as Northallerton in Yorkshire. He was there met by the forces of the Northern bishops and barons. . . . They gathered round a tall mast borne upon a carriage, on which, above the standards of the three Northern Saints, St. Peter of York, St. John of Beverley, and St. Wilfred of Ripon, was displayed a silver pyx bearing the consecrated wafer. The motley army of the Scots, some armed as the English, some in the wild dress of the Picts of Galloway, after a well-fought battle [August 22, 1138]

broke against the full-clad Norman soldiers, and were killed by the arrows, which had now become the national weapon of the English; 11,000 are said to have fallen on the field." From the great standard above described, which probably resembled the "Carroccio" of the mediæval Italian cities, the fight at Northallerton was called the Battle of the Standard.—J. F. STAPLE.—STAPLERS, The.—"A term which makes a great figure in the commercial regulations of this period [13th and 14th centuries] is that of the Staple. The word, in its primary acceptation, appears to have meant a particular port or other place to which certain commodities were obliged to be brought to be weighed or measured for the payment of the customs, before they could be sold, or in some cases exported or imported. Here the king's staple was said to be established. The articles of English produce upon which customs were anciently paid were wool, sheep-skins (or woolfels), and leather; and these were accordingly denominated the staples or staple goods of the kingdom. The persons who exported these goods were called the Merchants of the Staple: they were incorporated, or at least recognized as forming a society with certain privileges." By a charter granted by Edward II., in 1313, to the merchants of the staple, Antwerp was made the staple for wool and woolfels, and they could be carried for sale to no other port in Brabant, Flanders or Artois. In 1326 the staple was removed altogether from the continent and fixed at certain places within the English kingdom. In 1341 it was established at Bruges; in 1348 at Calais (which the English had captured); in 1353 it was again removed entirely from the continent;—and thus the changes were frequent. During some intervals all staples were abolished and trade was set free from their restriction; but these were of brief duration.—G. L. Craik, *Hist. of British Commerce, ch.* 4 (*v.* 1).—"The staplers were merchants who had the monopoly of exporting the principal raw commodities of the realm, especially wool, woolfels, leather, tin, and lead; wool figuring most prominently among these 'staple' wares. The merchants of the staple used to claim that their privileges dated from the time of Henry III, but existing records do not refer to the staple before the time of Edward I. . . . The staples were the towns to which the above-mentioned wares had to be brought for sale or exportation. Sometimes there was only one such mart, and this was situated abroad, generally at Bruges or Calais, occasionally at Antwerp, St. Omer, or Middleburg. From the reign of Richard II until 1558 the foreign staple was at Calais. The list of home staples was also frequently changed."—C. Gross, *The Gild Merchant, pp.* 140–141.

STAR, Knights of the.—"On the 8th September, 1351, king John [of France] revived the almost obsolete order of the Star, in imitation of the Garter, and the first chapter of it was held at his palace of St. Ouen. At first there were but eighteen knights; the rest were added at different chapters. They wore a bright star on the crest of their helmets, and one pendant at their necks, and the same was embroidered on their mantles."—T. Johnes, *Note to Froissart's Chronicles, bk.* 1, *ch.* 152.

STAR CHAMBER, The Court of.—"In the reign of Edward III, the king's Continual Council was in the habit of sitting in what was called the Starred Chamber (la Chambre des Etoiles). After the establishment of the Court of Chancery as a separate and independent jurisdiction taking cognizance of the greater portion of the civil business of the Council, the latter body appears to have usually sat in the Star Chamber while exercising jurisdiction over such cases as were not sent to the Chancery. . . . Henry VII. . . . created, in the 3rd year of his reign, a new court, sometimes inaccurately called the Court of Star Chamber. . . . It continued to exist as a distinct tribunal from the Privy Council till towards the close of the reign of Henry VIII.; but in the meantime, probably during the chancellorship of Wolsey, the jurisdiction of the ancient Star Chamber (i. e. the Council sitting for judicial business) was revived, and in it the limited court erected by Henry VII. became gradually merged. . . . Under the Stewart Kings the court was practically identical with the Privy Council, thus combining in the same body of men the administrative and judicial functions. . . . Under the Stewart Kings the pillory, whipping, and cruel mutilations were inflicted upon political offenders by the sentence of this court; and at length the tyrannical exercise and illegal extension of its powers became so odious to the people that it was abolished by the Long Parliament in 1641."—T. P. Taswell-Langmead, *Eng. Const. Hist., pp.* 181–183.—"The Star Chamber was no temporary court. During 150 years its power penetrated into every branch of English life. No rank was exalted enough to defy its attacks, no insignificance sufficiently obscure to escape its notice. It terrified the men who had worsted the Armada; it overshadowed the dignity of the judicial bench; it summoned before its tribunal the Prynnes and the Cromwells, who at last proved its destroyers. It fell at length, but great was the fall thereof, and in its ruin was involved the downfall of the monarchy. It is with something of astonishment that the inquirer discovers that this august tribunal was merely the Council under another name; and that

the court, whose overgrown power the patriots of 1640 cast to the ground, was the same body whose early encroachments had alarmed the parliamentary leaders under Edward III and Richard II. The process by which the judicial authority of the Council passed into the form of the Court of Star Chamber admits of some dispute, and is involved in no little obscurity. . . . The Council's manner of proceeding was unlike that of other courts. Its punishments were as arbitrary as they were severe; it also exercised a power peculiar to itself of extorting confession by torture. Some, however, may imagine that powers so great were only occasionally exercised, that exceptional exertions of authority were employed to meet exceptional crimes, and that gigantic force was put forth to crush gigantic evils. Some circumstances have given currency to such a notion. . . . Yet no conception of the Star Chamber is more false than that which makes it a 'deus ex machina' which intervened only when the lower courts of justice stood confronted by some criminal attempt with which they were too weak to deal. The sphere of the Council's jurisdiction was unlimited. It is now no question of what it had a right to do, but of what it did. And any one who examines the most certain facts of history will be convinced that from the accession of Henry VII till the meeting of the Long Parliament the Council interfered in all matters, small as well as great. It is, indeed, perhaps not generally known, that crimes of a very ordinary nature, such as would now come before a police magistrate, occupied the attention of the Star Chamber."—A. V. Dicey, *The Privy Council, pt.* 3, *ch.* 4.

STATES-GENERAL OF FRANCE: In the 14th Century.—"I lately attempted to explain the manner in which the identity or union of the Royal Council and of the Parliament of Paris was virtually, though not formally dissolved [see PARLIAMENT OF PARIS], so that each of them thenceforward existed as a substantive and distinct body in the state. This tacit revolution had been nearly completed when Philip le Bel for the first time convened the States-General of France" (A. D. 1301). The circumstances under which this occurred were as follows: Philip had imposed a tax from which the clergy were not excepted. Pope Boniface issued a bull forbidding them to make the required payment. "Philip retaliated by an order forbidding them to pay the customary papal dues to Boniface himself. The Pope then summoned a synod, to advise him how he might most effectually resist this invasion of his pontifical rights; and Philip, in his turn, summoned the barons, clergy, and commons of his realm to elect deputies who should meet him at Paris, there to deliberate on the methods to be pursued for the successful conduct of his controversy with Rome. To Philip himself, the importance of this great innovation was probably not perceptible. He, as we may well believe, regarded it only as a temporary device to meet a passing exigency." Once more, before the end of his reign, in 1314, Philip assembled the States-General and procured their apparent assent to a tax, which proved to be exceedingly unpopular and which provoked a very turbulent resistance. The next meeting of the States-General,—called by King John—was in 1355, on the outbreak of the war with Edward III. of England. Under the lead of the celebrated Étienne (Stephen) Marcel, the States took matters on that occasion quite into their own hands. They created a commission to superintend the collecting of funds raised for the war, and they provided for an adjourned session in the following year to receive an accounting of the Expenditure. When the adjourned session took place, in 1356, King John was a prisoner in the hands of the English and his son Charles reigned as regent in his stead. This Charles, who became king in 1364, and who acquired the name of Charles the Wise, contrived to make the meeting of 1356 an abortive one and then endeavored to raise moneys and to rule without the help of the three estates. The result was an insurrection at Paris, led by Marcel, which forced the regent to convene the States-General once more. They met in 1357 under circumstances which gave them full power to check and control the royal authority, even to the extent of instituting a permanent commission, from their own membership, charged with a general superintendence of the administration of the government during the intervals between sessions of the States-General themselves. At that moment there would have seemed to be more promise of free government in France than across the channel. But the advantage which the national representatives acquired was brief. The taxes they imposed produced disappointment and discontent. They lost public favor; they fell into quarrels among themselves; the nobles and the clergy deserted the deputies of the people. The young regent gained influence, as the States-General lost it, and he was strengthened in the end by the violence of Marcel, who caused two offending ministers of the crown to be slain in the presence of the king. Then ensued a short period of civil war; Paris was besieged by the Dauphin-regent; Marcel perished by assassination; royalty recovered its ascendancy in France, with more firmness of footing than before. "It was the commencement of a long series of similar conflicts and of similar successes—conflicts and successes which terminated at length in the transfer of the power of the purse from the representatives of

the people to the ministers of the crown."—Sir J. Stephen, *Lect's on the Hist. of France, lect.* 10.—"The year 1357 was the period when the States-General had greatest power during the Middle Ages; from that time they rapidly declined; they lost, as did also the Third Estate, all political influence, and for some centuries were only empty shadows of national assemblies."—E. de Bonnechose, *Hist. of France, period* 4, *bk.* 2, *ch.* 3.—"One single result of importance was won for France by the states-general of the 14th century, namely, the principle of the nation's right to intervene in their own affairs, and to set the government straight when it had gone wrong or was incapable of performing that duty itself. . . . Starting from King John, the states-general became one of the principles of national right; a principle which did not disappear even when it remained without application, and the prestige of which survived even its reverses."—F. P. Guizot, *Popular Hist. of France, ch.* 21.

STEAM ENGINE: The beginning of its invention, before Watt.—"It is probable that the first contriver of a working steam-engine was Edward, second Marquis of Worcester [A.D. 1601–1667]. . . . He was born at London in 1601. His early years [when his title was Lord Herbert] were principally spent at Raglan Castle, his father's country seat, where his education was carefully attended to. . . . From an early period of his life Lord Herbert took especial pleasure in mechanical studies, and in the course of his foreign tours he visited and examined the famous works of construction abroad. On settling down at Raglan he proceeded to set up a laboratory, or workshop, wherein to indulge his mechanical tastes. . . . Among the works executed by Lord Herbert and his assistant at Raglan, was the hydraulic apparatus by means of which the castle was supplied with water. . . . It is probable that the planning and construction of these works induced Lord Herbert to prosecute the study of hydraulics, and to enter upon that series of experiments as to the power of steam which eventually led to the contrivance of his 'Water-commanding Engine.'" No description of the Marquis's engine remains which enables modern engineers to understand with certainty its principle and mode of working, and various writers "have represented it in widely different forms . . . . But though the Marquis did not leave the steam-engine in such a state as to be taken up and adopted as a practicable working power, he at least advanced it several important steps. . . . Even during the Marquis's lifetime other minds besides his were diligently pursuing the same subject. . . . One of the most distinguished of these was Sir Samuel Morland, appointed Master of Mechanics to Charles II. immediately after the Restoration. . . . Morland's inventions proved of no greater advantage to him than those of the Marquis of Worcester had done. . . . The next prominent experimenter on the powers of steam was Dr. Dionysius Papin." Being a Protestant, he was driven to England in 1681, four years before the Revocation of the Edict of Nantes, and received, through the friendship of Dr. Boyle, the appointment of Curator of the Royal Society. It was during this connection that he constructed his well-known "Digester," which was an apparatus for the cooking of meats under a high pressure and consequent high temperature of steam. For the safe employment of so high a pressure he invented the safety-valve. His success with the Digester led him to experiments with steam as a motive force. Having been invited to Germany, he made the attempt there to pump water by atmospheric pressure, on a large scale, producing the vacuum by a condensation of steam; but his undertakings were not successful. He next tried steam navigation, converting the alternate motion of a piston in a steam cylinder into rotary motion, turning paddle-wheels on the sides of a boat, by arming the piston-rods with

teeth, geared into wheels on the paddle axis. "His first experiments were doubtless failures;" but he finally succeeded to his satisfaction, and was conveying his model to London for exhibition, in 1707, when some barbarous boatmen in Germany destroyed it. Papin could raise no means for the construction of another, and three years later he died. "The attempts hitherto made to invent a working steam-engine, it will be observed, had not been attended with much success." But, "although the progress made seemed but slow, the amount of net result was by no means inconsiderable. Men were becoming better acquainted with the elastic force of steam. . . . Many separate and minor inventions, which afterwards proved of great value, had been made, such as the four-way cock, the safety-valve, and the piston moving in a cylinder. The principle of a true steam-engine had not only been demonstrated, but most of the separate parts of such an engine had been contrived by various inventors. It seemed as if all that was now wanting was a genius of more than ordinary power to combine them in a complete and effective whole. To Thomas Savery is usually accorded the merit of having constructed the first actual working steam-engine. . . . Thomas Savery was born at Shilston, . . . in Devon, about the year 1650. Nothing is known of his early life, beyond that he was educated to the profession of a military engineer. . . . He occupied much of his spare time in mechanical experiments, and in projecting and executing contrivances of various sorts." One of the earliest of these was a boat propelled by paddle-wheels, worked by man-power, turning a capstan, and this he exhibited on the Thames. "It is curious that it should not have occurred to Savery, who invented both a paddle-wheel boat and a steam-engine, to combine the two in one machine; but he was probably sick of the former invention . . . and gave it up in disgust, leaving it to Papin, who saw both his inventions at work, to hit upon the grand idea of combining the two in a steam-vessel. . . . It is probable that Savery was led to enter upon his next and most important invention by the circumstance of his having been brought up in the neighbourhood of the mining districts," and being well aware of the great difficulty experienced by the miners in keeping their pits clear of water." He devised what he called a "Fire Engine" for the raising of water. In this he made a double use of steam, in tight cylinders, first to create a vacuum, by condensing it, and then to force the water, so lifted, to a greater height, by pressure of fresh steam. "The great pressure of steam required to force up a high column of water was such as to strain to the utmost the imperfect boilers and receivers of those early days; and the frequent explosions which attended its use eventually led to its discontinuance in favour of the superior engine of Newcomen, which was shortly after invented. . . . This engine [of which the first working model was completed in 1705] . . . worked entirely by the pressure of the atmosphere, steam being only used as the most expeditious method of producing a vacuum," in a steam cylinder, under the piston which worked the rod of a pump. "The engine was, however, found to be very imperfect," until it was improved by a device for throwing a jet of cold water into the cylinder, to produce a more rapid condensation of steam. "Step by step, Newcomen's engine grew in power and efficiency, and became more and more complete as a self-acting machine."—S. Smiles, *Lives of Boulton and Watt, ch.* 1–4.—"We have . . . certain evidence that the Marquis of Worcester's Engine was in full operation for at least seven years, and that one of the conditions of the Act of Parliament obliged him to deposit a model in the Exchequer. His own estimate of its value may be judged by his gladly giving up for the promised tithe of it to the King, his claim on Charles I equal to £40,000, in lieu thereof. His Lordship's invention was never offered by him as a merely amusing trifle."—H. Dircks, *Life and Times of the Second Marquis of Worcester, p.* 337.

A. D. 1765-1785.—The improvements of James Watt.—After Newcomen, "no improvement of essential consequence . . . was effected in the steam engine until it came into the hands of Watt." James Watt, born at Greenock, Scotland, in 1736, educated to the profession of a mathematical instrument maker, and settled as such at Glasgow in 1757, began a few years later to give his thoughts to this subject. "Directing his attention first, with all his profound physical and mathematical knowledge, to the various theoretical points involved in the working of the machine, 'he determined,' says M. Arago, 'the extent to which the water dilated in passing from its liquid state into that of steam. He calculated the quantity of water which a given weight of coal could vaporise—the quantity of steam, in weight, which each stroke of one of Newcomen's machines of known dimensions expended—the quantity of cold water which required to be injected into the cylinder, to give the descending stroke of the piston a certain force—and finally, the elasticity of steam at different temperatures. All these investigations would have occupied the lifetime of a laborious philosopher; whilst Watt brought all his numerous and difficult researches to a conclusion, without allowing them to interfere with the labours of his workshop.' . . . Newcomen's machine laboured under very great defects. In the first place, the jet of cold water into the cylinder was a very imperfect means of condensing the steam. The cylinder, heated before, not being thoroughly cooled by it, a quantity of steam remained uncondensed, and, by its elasticity, impeded the descent of the piston, lessening the power of the stroke. Again, when the steam rushed into the cylinder from the boiler, it found the cylinder cold, in consequence of the water which had recently been thrown in; and thus a considerable quantity of steam was immediately condensed and wasted while the rest did not attain its full elasticity till the cylinder became again heated up to 212 degrees. These two defects . . . were sources of great expense. . . . Watt remedied the evil by a simple but beautiful contrivance—his separate condenser. The whole efficacy of this contrivance consisted in his making the condensation of the steam take place, not in the cylinder, but in a separate vessel communicating with the cylinder by a tube provided with a stop-cock. . . . So far the invention was all that could be desired; an additional contrivance was necessary, however, to render it complete. The steam in the act of being condensed in the separate vessel would give out its latent heat;

this would raise the temperature of the condensing water; from the heated water vapour would rise; and this vapour, in addition to the atmospheric air which would be disengaged from the injected water by the heat, would accumulate in the condenser, and spoil its efficiency. In order to overcome this defect, Watt attached to the bottom of the condenser a common air-pump, called the condenser pump, worked by a piston attached to the beam. and which, at every stroke of the engine, withdrew the accumulated water, air, and vapour. This was a slight tax upon the power of the machine, but the total gain was enormous—equivalent to making one pound of coal do as much work as had been done by five pounds in Newcomen's engine. This, certainly, was a triumph; but Watt's improvements did not stop here. In the old engine, the cylinder was open at the top, and the descent of the piston was caused solely by the pressure of the atmosphere on its upper surface. Hence the name of Atmospheric Engine, which was always applied to Newcomen's machine." Watt constructed his engine with the cylinder, closed at both ends; sliding the rod of the piston through a tightly packed hole in the metallic cover, introducing steam both above and below the piston,—but still using its expansive power only in the upper chamber, while in the lower it was employed as before to create a vacuum. "The engine with this improvement Watt named the Modified Engine; it was, however, properly, the first real steam engine; for in it, for the first time, steam, besides serving to produce the vacuum, acted as the moving force. . . . Another improvement less striking in appearance, but of value in economising the consumption of fuel, was the enclosing of the cylinder in a jacket or external drum of wood, leaving a space between which could be filled with steam. By this means the air was prevented from acting on the outside of the cylinder so as to cool it. A slight modification was also necessary in the mode of keeping the piston air-tight. . . . The purpose was . . . effected by the use of a preparation of wax, tallow, and oil, smeared on the piston-rod and round the piston-rim. The improvements which we have described had all been thoroughly matured by Mr. Watt before the end of 1765, two years after his attention had been called to the subject." Another two years had passed before he found the means to introduce his invention into practice. He formed a partnership at length with Dr. Roebuck, who had lately founded the Carron iron-works, near Glasgow. "A patent was taken out by the partners in 1769, and an engine of the new construction, with an eighteen-inch cylinder, was erected at the Kinneil coal-works [leased by Dr. Roebuck], with every prospect of complete success; when, unfortunately, Dr. Roebuck was obliged by pecuniary embarrassments to dissolve the partnership, leaving Watt with the whole patent, but without the means of rendering it available." For five years after this failure the steam-engine was practically put aside, while Watt devoted himself to civil engineering, which he had worked into as a profession. "At length, in 1774, Mr. Watt entered into a partnership most fortunate for himself and for the world. This was with Mr. Matthew Boulton, of the Soho Foundry, near Birmingham—a gentleman of remarkable scientific abilities, of liberal disposition and of unbounded enterprise." A prolongation of Watt's patent, which had nearly expired, was procured with great difficulty from Parliament, where a powerful opposition to the extension was led by Edmund Burke. The new engine, now fairly introduced, speedily supplanted Newcomen's, and Watt and his partner were made wealthy by stipulating with mine owners for one third part of the value of the coal which each engine saved. "The first consequence of the introduction of Watt's improved steam-engine into practice was to give an impulse to mining speculations. New mines were opened; and old mines . . . now yielded a return. This was the only obvious consequence at first. Only in mines, and generally for the purpose of pumping water was the steam-engine yet used; and before it could be rendered applicable to other purposes in the arts . . . the genius of Watt required once again to stoop over it, and bestow on it new creative touches." He produced the beautiful device known as the "parallel motion," for connecting the piston-rod of the engine with the beam through which its motion is transmitted to other pieces of machinery. "Another improvement, which, in point of the additional power gained, was more important than the parallel motion, and which indeed preceded it in point of time, was the 'Double-acting Engine,'" in which steam was introduced to act expansively on each side of the piston in the engine. He also invented the governor, to regulate the quantity of steam admitted from the boiler into the cylinder, and thus regulate the motion of the engine. "To describe all the other inventions of a minor kind connected with the steam-engine which came from the prolific genius of Watt, would occupy too much space." —*Life of James Watt* (*Chambers's Miscellany, v.* 17).—"The Watt engine had, by the construction of the improvements described in the patents of 1782–'85, been given its distinctive form, and the great inventor subsequently did little more than improve it by altering the forms and proportions of its details. As thus practically completed, it embodied nearly all the essential features of the modern engine. . . . The growth of the steam-engine has here ceased to be rapid, and the changes which followed the completion of the work of James Watt have been minor improvements, and rarely, if ever, real developments."—R. H. Thurston, *Hist. of the Growth of the Steam Engine, ch.* 3.

STEAM LOCOMOTION ON LAND.—The beginning of Railroads.—"The application of the steam engine to locomotion on land was, according to Watt, suggested by Robison, in 1759. In 1784, Watt patented a locomotive engine, which, however, he never executed. About the same time Murdoch, assistant to Watt, made a very efficient working model of a locomotive engine. In 1802, Trevithick and Vivian patented a locomotive engine, which was constructed and set to work in 1804 or 1805. It travelled at about five miles an hour, with a net load of ten tons. The use of fixed steam engines to drag trains on railways by ropes, was introduced by Cook in 1808. After various in-

ventors had long exerted their ingenuity in vain to give the locomotive engine a firm hold of the track by means of rackwork-rails and toothed driving wheels, legs, and feet, and other contrivances, Blackett and Hedley, in 1813, made the important discovery that no such aids are required, the adhesion between smooth wheels and smooth rails being sufficient. To adapt the locomotive engine to the great and widely varied speeds at which it now has to travel, and the varied loads which it now has to draw, two things are essential — that the rate of combustion of the fuel, the original source of the power of the engine, shall adjust itself to the work which the engine has to perform, and shall, when required, be capable of being increased to many times the rate at which fuel is burned in the furnace of a stationary engine of the same size; and that the surface through which heat is communicated from the burning fuel to the water shall be very large compared with the bulk of the boiler. The first of these objects is attained by the 'blast-pipe,' invented and used by George Stephenson before 1825; the second, by the tubular boiler, invented about 1829, simultaneously by Séguin in France and Booth in England, and by the latter suggested to Stephenson. On the 6th October, 1829, occurred that famous trial of locomotive engines, when the prize offered by the directors of the Liverpool and Manchester Railway was gained by Stephenson's engine, the 'Rocket,' the parent of the swift and powerful locomotives of the present day, in which the blast-pipe and tubular boiler are combined."— W. J. M. Rankine, *Manual of the Steam Engine, pp. xxv–xxvii.*— George Stephenson, the son of a common workingman, and self-educated as a mechanic and engineer, was appointed engine-wright of Killingworth Colliery in 1812. In the following year he urged the lessees of the colliery to undertake the construction of a "travelling engine," as he called it. "Lord Ravensworth, the principal partner, had already formed a very favourable opinion of Stephenson, from the important improvements which he had effected in the colliery engines, both above and below ground; and, after considering the matter, and hearing Stephenson's statements, he authorized him to proceed with the construction of a locomotive. . . . The engine was built in the workshops at the West Moor, the leading mechanic being John Thirlwall, the colliery blacksmith, an excellent workman in his way, though quite new to the work now entrusted to him. . . . The wheels of the new locomotive were all smooth,— and it was the first engine that had been so constructed. From the first, Mr. Stephenson was convinced that the adhesion between a smooth wheel and an edgerail would be as efficient as Mr. Blackett had proved it to be between the wheel and the tramroad. . . . The engine was, after much labour and anxiety, and frequent alterations of parts, at length brought to completion, having been about ten months in hand. It was first placed upon the Killingworth Railway on the 25th of July, 1814; and its powers were tried on the same day. On an ascending gradient of 1 in 450, the engine succeeded in drawing after it eight loaded carriages of 30 tons' weight at about four miles an hour; and for some time after, it continued regularly at work. It was indeed the most successful working engine that had yet been constructed. . . . The working of the engine was at first barely economical; and at the end of the year the steam power and the horse power were ascertained to be as nearly as possible upon a par in point of cost. The fate of the locomotive in a great measure depended on this very engine. Its speed was not beyond that of a horse's walk, and the heating surface presented to the fire being comparatively small, sufficient steam could not be raised to enable it to accomplish more on an average than about three miles an hour. The result was anything but decisive; and the locomotive might have been condemned as useless had not Mr. Stephenson at this juncture applied the steam blast [carrying the escape of steam from the cylinders of the engine into the chimney or smoke-stack of the furnace], and at once more than doubled the power of the engine." A second engine, embodying this and other improvements, was constructed in 1815, with funds provided by Mr. Ralph Dodds. "It is perhaps not too much to say that this engine, as a mechanical contrivance, contained the germ of all that has since been effected. . . . It is somewhat remarkable that, although George Stephenson's locomotive engines were in daily use for many years on the Killingworth railway, they excited comparatively little interest." But in 1821, Mr. Stephenson was employed to construct a line of railway from Witton Colliery, near Darlington, to Stockton, and to build three locomotives for use upon it. The Stockton and Darlington line was opened for traffic on the 27th of September, 1825, with great success. In 1826 the building of the Liverpool and Manchester Railway was begun, with George Stephenson as the chief engineer of the work, and the public opening of the line took place on the 15th of September, 1830. The directors had offered, in the previous year, a prize of £500 for the best locomotive engine to be designed for use on their road, and the prize was won by Stephenson's famous "Rocket," which attained a speed of 35 miles an hour. It was at the ceremonial of the opening of the Liverpool and Manchester Railway that Mr. Huskisson, then Prime Minister of England, was struck down by the "Rocket" and fatally injured, expiring the same night.— S. Smiles, *Life of George Stephenson, ch.* 9-24.— "Whatever credit is due to the construction of the first railroad ever built in America is usually claimed for the State of Massachusetts. Every one who has ever looked into a school history of the United States knows something of the Quincy railway of 1826. Properly speaking, however, this was never — or at least, never until the year 1871,— a railroad at all. It was nothing but a specimen of what had been almost from time immemorial in common use in England, under the name of 'tram-ways.' . . . This road, known as the Granite railway, built by those interested in erecting the Bunker Hill Monument, for the purpose of getting the stone down from the Quincy quarries to a wharf on Neponset River, from which it was shipped to its destination. The whole distance was three miles, and the cost of the road was about $34,000. . . . Apart, however, from the construction of the Granite railway, Massachusetts was neither particularly early nor particularly energetic in its railroad development. At a later day many of her sister States were in advance of her, and especially was this true of South Carolina. There is, indeed, some reason for believing that the

South Carolina Railroad was the first ever constructed in any country with a definite plan of operating it exclusively by locomotive steam power. . . . On the 15th of January 1831,—exactly four months after the formal opening of the Manchester & Liverpool road,—the first anniversary of the South Carolina Railroad was celebrated with due honor. A queer looking machine, the outline of which was sufficient in itself to prove that the inventor owed nothing to Stephenson, had been constructed at the West Point Foundry Works in New York during the summer of 1830—a first attempt to supply that locomotive which the Board had, with a sublime confidence in possibilities, unanimously voted on the 14th of the preceding January should alone be used on the road. The name of Best Friend was given to this very simple product of native genius. . . . In June, 1831, a second locomotive, called the West Point, had arrived in Charleston; and this at last was constructed on the principle of Stephenson's Rocket. In its general aspect, indeed, it greatly resembled that already famous prototype. There is a very characteristic and suggestive cut representing a trial trip made with this locomotive on March 5th, 1831. . . . About six months before . . . there had actually been a trial of speed between a horse and one of the pioneer locomotives, which had not resulted in favor of the locomotive. It took place on the present Baltimore & Ohio road upon the 28th of August, 1830. The engine in this case was contrived by no other than Mr. Peter Cooper. . . . The Cooper engine, however, was scarcely more than a working model. Its active-minded inventor hardly seems to have aimed at anything more than a demonstration of possibilities. The whole thing weighed only a ton, and was of one-horse power. . . . Poor and crude as the country was, however, America showed itself far more ready to take in the far reaching consequences of the initiative which Great Britain gave in 1830 than any other country in the world. . . . It might almost be said that there was a railroad mania. Massachusetts led off in 1826; Pennsylvania followed in 1827, and in 1828 Maryland and South Carolina. Of the great trunk lines of the country, a portion of the New York Central was chartered in 1825; the construction of the Baltimore & Ohio was begun on July 4th, 1828. The country, therefore, was not only ripe to accept the results of the Rainhill contest, but it was anticipating them with eager hope. . . . Accordingly, after 1830 trial trips with new locomotives followed hard upon each other. To-day it was the sensation in Charleston; to-morrow in Baltimore; the next day at Albany. Reference has already been made to a cut representing the excursion train of March 5th, 1831, on the South Carolina Railroad. There is, however, a much more familiar picture of a similar trip made on the 9th of August of the same year from Albany to Schenectady, over the Mohawk Valley road. This sketch, moreover, was made at the time and on the spot by Mr. W. H. Brown."—C. F. Adams, Jr., *Railroads: Their Origin and Problems, ch.* 1.

STEAM NAVIGATION, The beginnings.—"The earliest attempt to propel a vessel by steam is claimed by Spanish authorities . . . to have been made by Blasco de Garay, in the harbor of Barcelona, Spain, in 1543. . . . The account seems somewhat apochryphal, and it certainly led to no useful results. . . . In 1690, Papin proposed to use his piston-engine to drive paddle-wheels to propel vessels; and in 1707 he applied the steam-engine, which he had proposed as a pumping-engine, to driving a model boat on the Fulda at Cassel [see above—STEAM ENGINE THE BEGINNINGS, &C.]. . . . In the year 1736, Jonathan Hulls took out an English patent for the use of a steam-engine for ship-propulsion, proposing to employ his steamboat in towing. . . . There is no positive evidence that Hulls ever put his scheme to the test of experiment, although tradition does say that he made a model, which he tried with such ill-success as to prevent his prosecution of the experiment further. . . . A prize was awarded by the French Academy of Science, in 1752, for the best essay on the manner of impelling vessels without wind. It was given to Bernouilli, who, in his paper, proposed a set of vanes like those of a windmill—a screw in fact—one to be placed on each side the vessel and two more behind. . . . But a more remarkable essay is quoted by Figuier—the paper of l' Abbé Gauthier, published in the 'Memoires de la Société Royale des Sciences et Lettres de Nancy.'. . . A little later (1760), a Swiss clergyman, J. A. Genevois, published in London a paper relating to the improvement of navigation, in which his plan was proposed of compressing springs by steam or other power, and applying their effort while recovering their form to ship propulsion. It was at this time that the first attempts were made in the United States to solve this problem. . . . William Henry was a prominent citizen of the then little village of Lancaster, Pa., and was noted as an ingenious and successful mechanic. . . . In the year 1760 he went to England on business, where his attention was attracted to the invention—then new, and the subject of discussion in every circle—of James Watt. He saw the possibility of its application to navigation and to driving carriages, and, on his return home, commenced the construction of a steam-engine, and finished it in 1763. Placing it in a boat fitted with paddle-wheels, he made a trial of the new machine on the Conestoga River, near Lancaster, where the craft, by some accident, sank, and was lost. He was not discouraged by this failure, but made a second model, adding some improvements. Among the records of the Pennsylvania Philosophical Society is, or was, a design, presented by Henry in 1782, of one of his steamboats. . . . John Fitch, whose experiments will presently be referred to, was an acquaintance and frequent visitor to the house of Mr. Henry, and may probably have there received the earliest suggestions of the importance of this application of steam. About 1777 . . . Robert Fulton, then twelve years old, visited him, to study the paintings of Benjamin West, who had long been a friend and protégé of Henry. He, too, not improbably, received there the first suggestion which afterward . . . made the young portrait-painter a successful inventor and engineer. . . . In France, the Marquis de Jouffroy was one of the earliest to perceive that the improvements of Watt, rendering the engine more compact, more powerful, and, at the same time, more regular and positive in its action, had made it, at last, readily applicable to the propulsion of vessels. . . . Comte d'Auxiron and Chevalier Charles

Mounin, of Follenai, friends and companions of Jouffroy, were similarly interested, and the three are said to have . . . united in devising methods of applying the new motor. In the year 1770, D'Auxiron determined to attempt the realization of the plans which he had conceived. He resigned his position in the army," obtained from the King a patent of monopoly for fifteen years, and formed a company for the undertaking. "The first vessel was commenced in December, 1772. When nearly completed, in September, 1774, the boat sprung a leak, and, one night, foundered at the wharf." Quarrels and litigation ensued, D'Auxiron died, and the company dissolved. "The heirs of D'Auxiron turned the papers of the deceased inventor over to Jouffroy, and the King transferred to him the monopoly held by the former. . . . M. Jacques Périer, the then distinguished mechanic, was consulted, and prepared plans, which were adopted in place of those of Jouffroy. The boat was built by Périer, and a trial took place in 1774 [1775] on the Seine. The result was unsatisfactory." Jouffroy was still undiscouraged, and pursued experiments for several years, at his country home and at Lyons, until he had impoverished himself and was forced to abandon the field. "About 1785, John Fitch and James Rumsey were engaged in experiments having in view the application of steam to navigation. Rumsey's experiments began in 1774, and in 1786 he succeeded in driving a boat at the rate of four miles an hour against the current of the Potomac at Shepherdstown, W. Va., in presence of General Washington. His method of propulsion has often been reinvented since. . . . Rumsey employed his engine to drive a great pump which forced a stream of water aft, thus propelling the boat forward, as proposed earlier by Bernouilli. . . . Rumsey died of apoplexy, while explaining some of his schemes before a London society a short time later, December 23, 1793, at the age of 50 years. A boat, then in process of construction from his plans, was afterward tried on the Thames, in 1793, and steamed at the rate of four miles an hour. . . . John Fitch was an unfortunate and eccentric, but very ingenious, Connecticut mechanic. After roaming about until 40 years of age, he finally settled on the banks of the Delaware, where he built his first steamboat. . . . The machinery [of Fitch's first model] was made of brass, and the boat was impelled by paddle-wheels. . . . In September, 1785, Fitch presented to the American Philosophical Society, at Philadelphia, a model in which he had substituted an endless chain and floats for the paddle-wheels." His first actual steamboat, however, which he tried at Philadelphia in August, 1787, before the members of the Federal Constitutional Convention, was fitted with neither paddle-wheels nor floats, but with a set of oars or paddles on each side, worked by the engine. His second boat, finished in 1788, was similarly worked, but the oars were placed at the stern. This boat made a trip to Burlington, 20 miles from Philadelphia. "Subsequently the boat made a number of excursions on the Delaware River, making three or four miles an hour. Another of Fitch's boats, in April, 1790, made seven miles an hour. . . . In June of that year it was placed as a passenger-boat on a line from Philadelphia to Burlington, Bristol, Bordentown, and Trenton. . . . During this period, the boat probably ran between 2,000 and 3,000 miles, and with no serious accident. During the winter of 1790–'91, Fitch commenced another steamboat, the 'Perseverance,'" which was never finished. Although he obtained a patent from the United States, he despaired of success in this country, and went, in 1793, to France, where he fared no better. "In the year 1796, Fitch was again in New York City, experimenting with a little screw steamboat on the 'Collect' Pond, which then covered that part of the city now occupied by the 'Tombs,' the city prison. This little boat was a ship's yawl fitted with a screw, like that adopted later by Woodcroft, and driven by a rudely made engine. Fitch, while in the city of Philadelphia at about this time, met Oliver Evans, and discussed with him the probable future of steam-navigation, and proposed to form a company in the West." Soon afterwards, he settled on a land-grant in Kentucky, where he died in 1798. "During this period, an interest which had never diminished in Great Britain had led to the introduction of experimental steamboats in that country. Patrick Miller, of Dalswinton, had commenced experimenting, in 1786–'87, with boats having double or triple hulls, and propelled by paddle-wheels placed between the parts of the compound vessel." On the suggestion of James Taylor, he placed a steam-engine in a boat constructed upon this plan, in 1788, and attained a speed of five miles an hour. The next year, with a larger vessel, he made seven miles an hour. But for some reason, he pursued his undertaking no further. "In the United States, several mechanics were now at work besides Fitch. Samuel Morey and Nathan Read were among these. Nicholas Roosevelt was another. . . . In Great Britain, Lord Dundas and William Symington, the former as the purveyor of funds and the latter as engineer, followed by Henry Bell, were the first to make the introduction of the steam-engine for the propulsion of ships so completely successful that no interruption subsequently took place in the growth of the new system of water-transportation. . . . Symington commenced work in 1801. The first boat built for Lord Dundas, which has been claimed to have been the 'first practical steamboat,' was finished ready for trial early in 1802. The vessel was called the 'Charlotte Dundas,' in honor of a daughter of Lord Dundas. . . . Among those who saw the Charlotte Dundas, and who appreciated the importance of the success achieved by Symington, was Henry Bell, who, 10 years afterward, constructed the Comet, the first passenger-vessel built in Europe. This vessel was built in 1811, and completed January 18, 1812. . . . Bell constructed several other boats in 1815, and with his success steam-navigation in Great Britain was fairly inaugurated." Meantime this practical success had been anticipated by a few years in the United States, through the labors and exertions of Stevens, Livingston, Fulton, and Roosevelt. Fulton's and Livingston's first experiments were made in France (1803), where the latter was Ambassador from the United States. Three years later they renewed them in America, using an engine ordered for the purpose from Boulton & Watt. "In the spring of 1807 the 'Clermont,' as the new boat was christened, was launched from the ship-yard of Charles Brown, on the East River, New York. In August the machinery was on board and in successful operation.

The hull of this boat was 133 feet long, 18 feet wide, and 9 deep. The boat soon made a trip to Albany, running the distance of 150 miles in 32 hours running time, and returning in 30 hours. . . . This was the first voyage of considerable length ever made by a steam vessel; and Fulton, though not to be classed with James Watt as an inventor, is entitled to the great honor of having been the first to make steam-navigation an every-day commercial success. . . . The success of the Clermont on the trial-trip was such that Fulton soon after advertised the vessel as a regular passenger-boat between New York and Albany. During the next winter the Clermont was repaired and enlarged, and in the summer of 1808 was again on the route to Albany; and, meantime, two new steamboats — the Raritan and the Car of Neptune — had been built by Fulton. In the year 1811 he built the Paragon. . . . A steam ferry-boat was built to ply between New York and Jersey City in 1812, and the next year two others, to connect the metropolis with Brooklyn. . . . Fulton had some active and enterprising rivals." The prize gained by him "was most closely contested by Colonel John Stevens, of Hoboken," who built his first steamboat in 1804, propelling it by a screw with four blades, and his second in 1807, with two screws. He was shut out from New York waters by a monopoly which Fulton and Livingston had procured, and sent his little ship by sea to Philadelphia. "After Fulton and Stevens had thus led the way, steam-navigation was introduced very rapidly on both sides of the ocean." Nicholas J. Roosevelt, at Pittsburgh, in 1811, built, from Fulton's plans, the first steamer on the western rivers, and took her to New Orleans. "The first steamer on the Great Lakes was the Ontario, built in 1816, at Sackett's Harbor."—R. H. Thurston, *Hist. of the Growth of the Steam Engine, ch.* 5.

On the Ocean.—"In 1819 the Atlantic was first crossed by a ship using steam. This was the Savannah, of 380 tons, launched at Corlear's Hook, New York, August 22, 1818. She was built to ply between New York and Savannah as a sailing packet. She was however, purchased by Savannah merchants [by a Mr. Scarborough] and fitted with steam machinery, the paddle-wheels being constructed to fold up and be laid upon the deck when not in use, her shaft also having a joint for that purpose. She left Savannah on the 26th of May, and reached Liverpool in 25 days, using steam 18 days. The log book, still preserved, notes several times taking the wheels in on deck in thirty minutes. In August she left Liverpool for Cronstadt. An effort was made to sell her to Russia, which failed. She sailed for Savannah, touching at Copenhagen and Arendal, and arrived in 53 days. Her machinery later was taken out, and she resumed her original character as a sailing packet, and ended her days by being wrecked on the south coast of Long Island. But steam-power had by 1830 grown large enough to strike out more boldly. The Savannah's effort was an attempt in which steam was only an auxiliary, and one, too, of a not very powerful kind. Our coastwise steamers, as well as those employed in Great Britain, as also the voyage of the Enterprise to Calcutta in 1825 (though she took 113 days in doing it), had settled the possibility of the use of steam at sea, and the question had now become whether a ship could be built to cross the Atlantic depending entirely on her steam power. It had become wholly a question of fuel consumption. The Savannah, it may be said, used pitch-pine on her outward voyage, and wood was for a very long time the chief fuel for steaming purposes in America. . . . In 1836, under the influence of Brunel's bold genius, the Great Western Steamship Company was founded as, an off-shoot of the Great Western Railway, whose terminus was then Bristol." The Company's first ship was the Great Western. She was of unprecedented size—236 feet length and 35 feet 4 inches breadth—"determined on by Brunel as being necessary for the requisite power and coal carrying capacity. . . . The Great Western was launched on July 19, 1837, and was towed from Bristol to the Thames to receive her machinery, where she was the wonder of London. She left for Bristol on March 31, 1838; and arrived, after having had a serious fire on board, on April 2d. In the meantime others had been struck with the possibility of steaming to New York; and a company, of which the moving spirit was Mr. J. Laird, of Birkenhead, purchased the Sirius, of 700 tons, employed between London and Cork, and prepared her for a voyage to New York. The completion of the Great Western was consequently hastened; and she left Bristol on Sunday, April 8, 1838, at 10 A. M. with 7 passengers on board, and reached New York on Monday, the 23d, the afternoon of the same day with the Sirius, which had left Cork Harbor (where she had touched en route from London) four days before the Great Western had left Bristol. The latter still had nearly 200 tons of coal, of the total of 800, on board on arrival; the Sirius had consumed her whole supply, and was barely able to make harbor. It is needless to speak of the reception of these two ships at New York. It was an event which stirred the whole country, and with reason; it had practically, at one stroke, reduced the breadth of the Atlantic by half. . . . The Great Western started on her return voyage, May 7th, with 66 passengers. This was made in 14 days, though one was lost by a stoppage at sea." Within a few years following several steamers were placed in the transatlantic trade, among them the Royal William, the British Queen, the President, the Liverpool, and the Great Britain, the latter a screw steamer, built of iron and put afloat by the Great Western Company. In 1840 the long famous Cunard line was founded by Mr. Samuel Cunard, of Halifax, Nova Scotia, in company with Mr. George Burns of Glasgow and Mr. David McIver of Liverpool. The screw propeller (taking the place of the paddle-wheel), which made its first appearance in ocean navigation with the Great Britain, obtained its practical introduction through the labors of the great Swedish engineer, John Ericsson, though an idea of it had been in the minds of many inventors for a century and a half. Ericsson, induced by Francis B. Ogden and Captain Robert F. Stockton, U. S. N., came to the United States in 1839, and the introduction of the screw-propeller occurred rapidly after that date, the paddle-wheel disappearing from ocean steamships first, and more slowly from the steamers

engaged in lake and river navigation.—F. E. Chadwick, *The Development of the Steamship* (*"Ocean Steamships," ch.* 1).

STELA, OR STELE.—"This is one of the words most frequently used in Egyptian archæology, because it designates a monument which is found in hundreds. The stela is a rectangular flat stone generally rounded at the summit, and it was made use of by the Egyptians for all sorts of inscriptions. These stelæ were, generally speaking, used for epitaphs; they also served, however, to transcribe texts which were to be preserved or exhibited to the public, and in this latter case the stela became a sort of monumental placard."—A. STIRLING CASTLE, Sieges of.—Stirling Castle was taken in 1303 by Edward I. of England, after a three months' siege, which he conducted in person and which he looked upon as his proudest military achievement. Eleven years later, in 1314, it was besieged and recaptured by the Scots, under Edward Bruce, and it was in a desperate attempt of the English to relieve the castle at that time that the battle of Bannockburn was fought.—J. H. Burton, *Hist. of Scotland, ch.* 22–23 (*v.* 2).—See SCOTLAND: A. D. 1314.

STOA, The.—"We have repeatedly mentioned the stoa or colonnade in connection with other buildings; we now have to consider it as a separate artistic erection [in ancient Greek cities]. . . . The stoa, as an independent building, occurs both as an ornament of streets and squares, and as a convenient locality for walks and public meetings. Its simplest form is that of a colonnade bounded by a wall. This back wall offers a splendid surface for decorations, and is frequently adorned with pictures. A stoa in the market-place of Athens contained illustrations of the battle of Œnoë, of the fight of the Athenians against the Amazons, of the destruction of Troy and of the battle of Marathon. . . . The progress from this simple form to a further extension is on a principle somewhat analogous to what we have observed in the temple; that is, a row of columns was added on the other side of the wall. The result was a double colonnade, . . . as a specimen of which, Pausanias mentions the Korkyraic stoa near the market place of Elis. As important we notice Pausanias's remark that this stoa 'contained in the middle, not columns, but a wall'; which shows that most of the double

colonnades contained columns in the centre as props of the roof."—E. Guhl and W. Koner, *Life of the Greeks and Romans, pt.* 1, *sect.* 27.

STOLA, The.—"The Roman ladies wore, by way of under garment, a long tunic descending to the feet, and more particularly denominated 'stola.' This vestment assumed all the variety of modification displayed in the corresponding attire of the Grecian females. Over the stola, they also adopted the Grecian peplum, under the name of palla."—T. Hope, *Costume of the Ancients, v.* 1, *p.* 38.

STOLHOFEN, The breaking of the lines of (1707). See GERMANY: A. D. 1706–1711.

STONE AGE.—BRONZE AGE.—IRON AGE.—"Human relics of great antiquity occur, more or less abundantly, in many parts of Europe. . . . The antiquities referred to are of many kinds—dwelling-places, sepulchral and other monuments, forts and camps, and a great harvest of implements and ornaments of stone and metal. In seeking to classify these relics and remains according to their relative antiquity, archæologists have selected the implements and ornaments as affording the most satisfactory basis for such an arrangement, and they divide prehistoric time into three periods, which are termed respectively the Stone Age, the Bronze Age, and the Iron Age. Of these periods the earliest was the Stone Age, when implements and ornaments were formed exclusively of stone, wood, horn, and bone. The use of metal for such purposes was then quite unknown. To the Stone Age succeeded the Age of Bronze, at which time cutting instruments, such as swords and knives and axes, began to be made of copper, and an alloy of that metal and tin. When in the course of time iron replaced bronze for cutting-instruments, the Bronze Age came to an end and the Iron Age supervened. . . . The archæological periods are simply so many phases of civilisation, and it is conceivable that Stone, Bronze, and Iron Ages might have been contemporaneous in different parts of one and the same continent. . . . It has been found necessary within recent years to subdivide the Stone Age into two periods, called respectively the Old Stone and New Stone Ages; or, to employ the terms suggested by Sir John Lubbock, and now generally adopted, the Palæolithic and Neolithic Periods. The stone implements belonging to the older of these periods show but little variety of form, and are very rudely fashioned, being merely roughly chipped into shape, and never ground or polished."—J. Geikie, *Prehistoric Europe, pp.* 5–11.

STRASBURG: A. D. 357.—Julian's victory.—The most serious battle in Julian's campaigns against the Alemanni was fought in August, A. D. 357, at Strasburg (then a Roman post called Argentoratum) where Chnodomar had crossed the Rhine with 35,000 warriors. The result was a great victory for the Romans.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 19.—See GAUL: A. D. 355–361.

A. D. 842.—The Oaths.—During the civil wars which occurred between the grandsons of Charlemagne, in 842, the year following the great battle at Fontainelles, the two younger of the rivals, Karl and Ludwig, formed an alliance against Lothaire. Karl found his support in Aquitaine and Neustria; Ludwig depended on the East Franks and their German kindred. The armies of the two were assembled in February at Strasburg (Argentaria) and a solemn oath of friendship and fidelity was taken by the kings in the presence of their people and repeated by the latter. The oath was repeated in the German language, and in the Romance language—then just acquiring form in southern Gaul,—and it has been preserved in both. "In the Romance form of this oath, we have the earliest monument of the tongue out of which the modern French was formed."—P. Godwin, *Hist. of France: Ancient Gaul, ch.* 18.

STUNDISTS, The.—In the neighborhood of Kherson, in southern Russia, the Stundist religious movement arose, about 1858. As its name implies, it "had a German origin. As far back as 1778 the great Empress Catherine had colonized Kherson with peasants from the Suabian land, who brought with them their religion, their pastors, and their industrious, sober ways. For many years national prejudices and the barriers of language kept Russians and Germans apart from each other. But sooner or later true life begins to tell. . . . Some of the Russian peasants who had been helped in their poverty or ministered to in their sickness by their German neighbours began to attend their services—to keep the 'stunden,' or 'hours,' of praise and prayer; they learned to read, were furnished with the New Testament in their own language, and eventually some of them found the deeper blessing of eternal life. In this simple scriptural fashion this memorable movement began. Men told their neighbours what God had done for their souls, and so the heavenly contagion spread from cottage to cottage, from village to village, and from province to province, till at length the Russian Stundists were found in all the provinces from the boundaries of the Austrian Empire in the West to the land of the Don Cossack in the East, and were supposed to number something like a quarter-of-a-million souls. . . . M. Dalton, a Lutheran clergyman, long resident in St. Petersburg, and whose knowledge of religious movements in Russia is very considerable, goes so far as to say that they are two millions strong. But it is not alone to the actual number of professing Stundists that we are to look in estimating the force and extent of the movement which they have inaugurated in Russia. . . . Compared with the enormous population of the Russian Empire, the number of Stundists, whether two millions or only a quarter of a million, is insignificant; but the spirit of Stundism has spread, and is still spreading into regions as ultra-Orthodox as the heart of the most bigoted Greek Churchman could desire, and is slowly but surely leavening the whole mass."—J. Brown, ed., *The Stundists, pref. and ch.* 14.

SUBLICIAN BRIDGE.—The Pons Sublicius was the single bridge in ancient Rome with which the Tiber was originally spanned. It was built of wood, and constructed for easy removal when an enemy threatened. No trace of it exists.—B. G. Niebuhr, *Lect's on Ancient Ethnog. and Geog., v.* 2, *p.* 103.

SUBLIME PORTE, The.—"The figurative language of the institutes of Mahomet II. [Sultan, A. D. 1451–1481], still employed by his successors, describes the state under the martial metaphor of a tent. The Lofty Gate of the Royal Tent (where Oriental rulers of old sate to administer justice) denotes the chief seat of government. The Italian translation of the phrase, 'La Porta Sublima,' has been adopted by Western nations, with slight modifications to suit their respective languages; and by 'The Sublime Porte' we commonly mean the Imperial Ottoman Government. The Turkish legists and historians depict the details of their government by imagery drawn from the same metaphor of a royal tent. The dome of the state is supported by four pillars. These are formed by, 1st, the Viziers; 2nd, the Kadiaskers (judges); 3rd, the Defterdars (treasurers); and 4th, the Nischandyis (the secretaries of state). Besides these, there are the Outer Agas, that is to say, the military rulers; and the Inner Agas, that is to say, the rulers employed in the court. There is also the

order of the Ulema, or men learned in the law. The Viziers were regarded as constituting the most important pillar that upheld the fabric of the state. In Mahomet II.'s time the Viziers were four in number. Their chief, the Grand Vizier, is the highest of all officers. . . . The . . . high legal dignitaries (who were at that time next in rank to the Kadiaskers) were, 1st, the Kho-dya, who was the tutor of the Sultan and the Princes Royal; 2nd, the Mufti, the authoritative expounder of the law; and, 3rdly, the Judge of Constantinople. . . . The great council of state was named the Divan; and, in the absence of the Sultan, the Grand Vizier was its president. . . . The Divan was also attended by the Reis-Effendi, a general secretary, whose power afterwards became more important than that of the Nis-chandyis; by the Grand Chamberlain, and the Grand Marshal, and a train of other officers of the court."—Sir E. S. Creasy, *Hist. of the Ottoman Turks, pp.* 96–97.—See, also, Pharaohs.

SUB-TREASURY, The. See United States of Am.: A. D. 1837.

SUBURA, at Rome, The.—"Between the converging points of the Quirinal and Esquiline hills lay the Subura, a district of ill-fame, much abused by the poets and historians of imperial times. It was one of the most ancient district communities ('pagi') of Rome, and gave name to one of the four most ancient regions. Nor was it entirely occupied by the lowest class of people, as might be inferred from the notices of it in Martial and Horace. Julius Cæsar is said to have lived in a small house here. . . . The Subura was a noisy, bustling part of Rome, full of small shops, and disreputable places of various kinds."—R. Burn, *Rome and the Campagna, ch.* 6, *pt.* 1.

SUDAN, OR SOUDAN, The.—"Forming a natural frontier to the Great Desert is that section of Africa known by the somewhat vague name of Sudan. By this term is understood the region south of the Sahara, limited on the west and south by the Atlantic Ocean as far as it reaches. From the Gulf of Guinea inland, there is no definite southern border line. It may, however, be assumed at the fifth degree of north latitude. . . . [The] Nile region is generally taken as the eastern frontier of Sudan, although it properly reaches to the foot of the Abyssinian highlands. Hence modern maps have introduced the appropriate expression 'Egyptian Sudan' for those eastern districts comprising Senaar, Kordofan, Darfur, and some others. Sudan is therefore, strictly speaking, a broad tract of country reaching right across the whole continent from the Atlantic seaboard almost to the shores of the Red Sea, and is the true home of the Negro races. When our knowledge of the interior has become sufficiently extended to enable us accurately to fix the geographical limits of the Negroes, it may become desirable to make the term Sudan convertible with the whole region inhabited by them."— Hellwald-Johnston, *Africa* (*Stanford's Compendium*), *ch.* 9.

SUEVI, OR SUEBI, The.—"I must now speak of the Suevi, who are not one nation as are the Chatti and Tencteri, for they occupy the greater part of Germany, and have hitherto been divided into separate tribes with names of their own, though they are called by the general designation of 'Suevi.' A national peculiarity with them is to twist their hair back and fasten it in a knot. This distinguishes the Suevi from the other Germans, as it also does their own freeborn from their slaves."—"Suevia would seem to have been a comprehensive name for the country between the Elbe and the Vistula as far north as the Baltic. Tacitus and Cæsar differ about the Suevi. Suabia is the same word as Suevia."—Tacitus, *Germany, tr. by Church and Brodribb, ch.* 38, *with geog. note.*—"The Suebi, that is the wandering people or nomads. . . . Cæsar's Suebi were probably the Chatti; but that designation certainly belonged in Cæsar's time, and even much later, to every other German stock which could be described as a regularly wandering one."—T. Mommsen, *Hist. of Rome, bk.* 5, *ch.* 7, *with note.*—"The name of the country called Suabia is a true ethnological term, even as Franconia is one. The one means the country occupied by the Suevi, the other the country occupied by the Franks. . . . At what time the name first became an unequivocal geographical designation of what now, in the way of politics, coincides with the Grand Duchy of Baden and part of Wurtemburg, and, in respect to its physical geography, is part of the Black Forest, is uncertain. It was not, however, later than the reign of Alexander Severus (ending A. D. 235). . . . Therein, Alamannia and Suevia appear together — as terms for that part of Germany which had previously gone under the name of 'Decumates agri,' and the parts about the 'Limes Romanus.' With this, then, begins the history of the Suevi of Suabia, or, rather, of the Suabians. Their alliances were chiefly with the Alamanni and Burgundians; their theatre the German side of France, Switzerland, Italy, and (in conjunction with the Visigoths) Spain. Their epoch is from the reign of Alexander to that of Augustulus, in round numbers, from about A. D. 225 to A. D. 475."—R. G. Latham, *The Germania of Tacitus, epilegomena, sect.* 20.—See, also, Alemanni, and Bavaria: The ethnology.

B. C. 58.—Expulsion from Gaul by Cæsar.—A large body of the Suevi, a formidable German tribe, the name of which has survived in modern Suabia, crossed the Rhine and entered Gaul about B. C. 61. They came at the invitation of the Arverni and Sequani of Gaul, who

were forming a league against the Ædui, their rivals, and who sought the aid of the German warriors. The latter responded eagerly to the call, and, having lodged themselves in the country of the Sequani, summoned fresh hordes of their countrymen to join them. The Gauls soon found that they had brought troublesome neighbors into their midst, and they all joined in praying Cæsar and his Roman legions to expel the insolent intruders. Cæsar had then just entered on the government of the Roman Gallic provinces and had signalized his first appearance in the field by stopping the attempted migration of the Helvetii, destroying two thirds of them, and forcing the remnant back to their mountains. He welcomed an opportunity to interfere further in Gallic affairs and promptly addressed certain proposals to the Suevic chieftain, Ariovistus, which the latter rejected with disdain. Some negotiations followed, but both parties meant war, and the question, which should make a conquest of Gaul, was decided speedily at a great battle fought at some place about 80 miles from Vesontio (modern Besançon) in the year 58 B. C. The Germans were routed, driven into the Rhine and almost totally destroyed. Ariovistus, with a very few followers, escaped across the river, and died soon afterwards.—C. Merivale, *History of the Romans, ch.* 6.

A. D. 409-573.—Their history in Spain.—"The Suevi kept their ground for more than half a century in Spain, before they embraced the Christian religion and became Arians. Being surrounded on all sides by the Visigoths, their history contains merely an account of the wars which they had to maintain against their neighbours: they were long and bloody; 164 years were passed in fighting before they could be brought to yield. In 573, Leovigild, king of the Visigoths, united them to the monarchy of Spain."—J. C. L. de Sismondi, *Fall of the Roman Empire, ch.* 7 (*v.* 1).—See, also, VANDALS: A. D. 428, and GOTHS (VISIGOTHS): A. D. 507–712.

A. D. 460-500.—In Germany.—Those tribes of the Suevic confederacy which remained on the German side of the Rhine, while their brethren pressed southwards, along with the Vandals and Burgundians, in the great invasive movement of 406, "dwelt in the south-west corner of Germany, in the region which is now known as the Black Forest, and away eastwards along the Upper Danube, perhaps as far as the river Lech. They were already mingled with the Alamanni of the mountains, a process which was no doubt carried yet further when, some thirty years after the time now reached by us [about 460] Clovis overthrew the monarchy of the Alamanni [A. D. 496], whom he drove remorselessly forth from all the lands north of the Neckar. The result of these migrations and alliances was the formation of the two great Duchies with which we are so familiar in the mediaeval history of Germany—Suabia and Franconia. Suabia, which is a convertible term with Alamannia, represents the land left to the mingled Suevi and Alamanni; Franconia that occupied east of the Rhine by the intrusive Franks."—T. SUIONES, The.—"Next [on the Baltic] occur the communities of the Suiones, seated in the very Ocean, who, besides their strength in men and arms, also possess a naval force. . . . These people honour wealth."—Tacitus, *Germany, Oxford Trans., ch.* 44.—"The Suiones inhabited Sweden and the Danish isles of Funen, Langland, Zeeland, Laland, etc. From them and the Cimbri were derived the Normans."—*Note to same.*

SULIOTES, The.—"The heroic struggle of the little commonwealth over a number of years [1787–1804] against all the resources and ingenuity of Ali Pacha [vizir of Jannina] is very stirring and full of episode. . . . The origin of the Suliotes is lost in obscurity. . . . The chief families traced their origin to different villages and districts; and, though their language was Greek, they appear to have consisted, for the most part, of Christian Albanians, with a small admixture of Greeks, who, flying from the oppression of the invaders, had taken refuge in the well-nigh inaccessible mountains of Chamouri (Chimari) [in Epirus], and had there established a curious patriarchal community. . . . At the time when they became conspicuous in history the Suliotes were possessed of four villages in the great ravine of Suli, namely, Kiapha, Avariko, Samoniva, and Kako-Suli, composing a group known as the Tetrachorion; and seven

villages in the plains, whose inhabitants, being considered genuine Suliotes, were allowed to retire into the mountain in time of war. . . . They also controlled between 50 and 60 tributary villages, with a mixed population of Greeks and Albanians; but these were abandoned to their fate in war. In the early part of the last century the Suliotes are said not to have had more than 200 fighting-men, although they were almost always engaged in petty warfare and marauding expeditions; and at the period of their extraordinary successes the numbers of the Suliotes proper never exceeded 5,000 souls, with a fighting strength of 1,500 men, who were, however, reinforced at need by the women. Their government was purely patriarchal; they had neither written laws nor law courts, and the family formed the political unit of the State. The families were grouped together in tribal alliances called Pharas, of which there were 29 in the Tetrachorion and 18 in the Heptachorion. All disputes were settled by arbitration by the heads of the Pharas; and these 47 elders formed a sort of general Council, the matter for discussion being almost exclusively war. As they were gradually driven from the plains which had supported them to the mountains, which produced nothing but pasture for their flocks, they were of necessity compelled to support themselves by marauding expeditions, which involved them in perpetual difficulties with the surrounding Ottoman governors. The historian of Suli enumerates no less than eight wars in which the community was involved before their great struggle with Ali."—R. Rodd, *The Customs and Lore of Modern Greece, ch.* 10.

SUPREMACY, The Acts of.—The first Act of Supremacy, which established the independence of the Church of England and broke its relations with Rome, was passed by the English Parliament during the reign of Henry VIII., in 1534. It enacted "that the King should be taken and reputed 'the only Supreme Head on earth of the Church of England called Ecclesia Anglicana, and shall have and enjoy, annexed and united to the imperial Crown of this realm, as well the title and style thereof, as all honours, dignities, pre-eminencies, jurisdictions, privileges, authorities, immunities, profits, and commodities, to the said dignity of Supreme Head of the same church belonging and appertaining'; with full power to visit, reform, and correct all heresies, errors, abuses, offences, contempts and enormities which, by any manner of spiritual authority or jurisdiction, ought to be reformed or corrected."—T. P. Taswell-Langmead, *English Const. Hist., ch.* 11.—The Act of Supremacy was repealed in the reign of Mary and re-enacted with changes in that of Elizabeth, 1559. See England: A. D. 1527–1534; and 1559.

SUPREME COURT OF THE UNITED STATES, The.—"On the 24th day of September, 1789, the act organizing the Supreme Court was passed. The Court was constituted with a Chief Justice and five associates. John Jay was appointed the first Chief Justice by Washington. Webster said of him that when the ermine fell upon his shoulders, it touched a being as spotless as itself. The Court first convened in February, 1790, in New York. It does not appear from the reports that any case then came before it. Jay remained Chief Justice until 1795, when he resigned to become governor of the State of New York. A Chief Justice in our day would hardly do this. His judicial duties were so few that he found time, in 1794, to accept the mission to England to negotiate the treaty so famous in history as 'Jay's Treaty.' John Rutledge of South Carolina was appointed to succeed Jay, but he was so pronounced in his opposition to the treaty, and so bitter in his denunciation of Jay himself, that the federal Senate refused to confirm him. William Cushing of Massachusetts, one of the associate justices, was then nominated by Washington, and was promptly confirmed; but he preferred to remain associate justice, and Oliver Ellsworth of Connecticut was made Chief Justice. He held the office until 1801, when John Marshall of Virginia was appointed by President Adams. Marshall held the office thirty-four years. He was known at the time of his appointment as an ardent Federalist. In our time

he is known as 'the great Chief Justice.' Roger B. Taney was the next incumbent. He was appointed by President Jackson. His political enemies styled him a renegade Federalist, and said that his appointment was his reward for his obsequious obedience, while Secretary of the Treasury, to President Jackson. But Taney, despite the Dred Scott decision, was an honest man and a great judge. His opinions are models of lucid and orderly discussion, and are of admirable literary form. He held the office for twenty-eight years, and upon his death in 1864, President Lincoln appointed Salmon P. Chase, of Ohio. Chief Justice Chase died in 1874. President Grant then appointed Morrison R. Waite of Ohio. He died in 1888. Melville W. Fuller, of Illinois, is the present [1889] incumbent, his appointment having been made by President Cleveland. . . . In 1807 an associate judge was added by Congress; two more were added in 1837, and one in 1863. They were added to enable the Court to perform the work of the circuits, which increased with the growth of the country."—J. S. Landon, *The Const. Hist. and Gov't of the U. S., lect.* 10.—"The Supreme court is directly created by Art. iii., sect. 1 of the Constitution, but with no provision as to the number of its judges. Originally there were six; at present there are nine, a chief justice, with a salary of $10,500 (£2,100), and eight associate judges (salary $10,000). The justices are nominated by the President and confirmed by the Senate. They hold office during good behaviour, i. e. they are removable only by impeachment. They have thus a tenure even more secure than that of English judges, for the latter may be removed by the Crown on an address from both Houses of Parliament. . . . The Fathers of the Constitution were extremely anxious to secure the independence of their judiciary, regarding it as a bulwark both for the people and for the States against aggressions of either Congress or the President. They affirmed the life tenure by an unanimous vote in the Convention of 1787, because they deemed the risk of the continuance in office of an incompetent judge a less evil than the subserviency of all judges to the legislature, which might flow from a tenure dependent on legislative will. The result has justified their expectations. The judges have shown themselves independent of Congress and of party, yet the security of their position has rarely tempted them to breaches of judicial duty. Impeachment has been four times resorted to, once only against a justice of the Supreme court, and then unsuccessfully. Attempts have been made, beginning from Jefferson, who argued that judges should hold office for terms of four or six years only, to alter the tenure of the Federal judges, as that of the State judges has been altered in most States; but Congress has always rejected the proposed constitutional amendment. The Supreme court sits at Washington from October till July in every year."—J. Bryce, *The Am. Commonwealth, pt.* 1, *ch.* 22 (*v.* 1).—"It is, I believe, the only national tribunal in the world which can sit in judgment on a national law, and can declare an act of all the three powers of the Union to be null and void. No such power does or can exist in England. Any one of the three powers of the state, King, Lords, or Commons, acting alone, may act illegally; the three acting together cannot act illegally. An act of parliament is final; it may be repealed by the power which enacted it; it cannot be questioned by any other power. For in England there is no written constitution; the powers of Parliament, of King, Lords, and Commons, acting together, are literally boundless. But in your Union, it is not only possible that President, Senate, or House of Representatives, acting alone, may act illegally; the three acting together may act illegally. For their powers are not boundless, they have no powers but such as the terms of the constitution, that is, the original treaty between the States, have given them. Congress may pass, the President may assent to, a measure which contradicts the terms of the constitution. If they so act, they act illegally, and the Supreme Court can declare such an act to be null and void. This difference flows directly from the difference between a written and an unwritten constitution. It does not follow that every state which has a written constitution need vest in its highest court such powers as are vested in yours, though it certainly seems to me that, in a federal constitution, such a power is highly expedient. My point is simply that such a power can exist where there is a written constitution: where there is no written constitution, it cannot."—E. A. SUSA.—SUSIANA.—SHUSHAN.—Originally the capital of the ancient kingdom of Elam, Shushan, or Susiana, or Susa, as it has been variously called, was in later times made the principal capital of the Persian empire, and became the scene of the Biblical story of Esther. A French expedition, directed by M. Dieulafoy and wife, undertook an exploration of the ruins of Susa in 1885 and has brought to light some remarkably interesting and important remains of ancient art. The name Susiana was applied by the Greeks to the country of Elam, as well as to the capital city, and it is sometimes still used in that sense.—Z. A. SWEATING SICKNESS, The. — The "Sudor Anglicus," or Sweating Sickness was a strange and fearful epidemic which appeared in England in 1485 or 1486, and again in 1507, 1518, 1529, and 1551. In the last three instances it passed to the continent. Its first appearance was always in England, from which fact it took one of its names. Its peculiar characteristic was the profuse sweating which accompanied the disease. The mortality from it was very great. — J. H. Baas, *Outlines of the History of Medicine, pp.* 318–319.—See, also, PLAGUE, ETC.: A. D. 1485–1593.

Early inhabitants. See HELVETII; ALEMANNI: A. D. 496–504; BURGUNDIANS: A. D. 443–451; also, below: THE THREE FOREST CANTONS.

The Three Forest Cantons, their original Confederation (Eidgenossenschaft), and their relations with the House of Austria.— History divested of Legend.—"It is pretty clear that among those Helvetii with whom Cæsar had his cruel struggle [see HELVETII, THE ARRESTED MIGRATION OF THE], and who subsequently became an integral portion of the empire, there were no people from the Forest Cantons of Schwytz, Uri, and Unterwalden. The men who defied the Roman eagles were inhabitants of the mountain slopes between the lakes of Geneva and Constance. On the North, the authority of the Romans penetrated no farther in the direction of the mountainous Oberland than to Zurich or Turicum. They, no doubt, ascended far up the valley of the Rhone, where they have left their mark in the speech of the people to this day; but they did not climb the mountain passes leading across the great chain of the Alps. It may be questioned if the higher valleys of Switzerland were then, or for centuries after the fall of the Western Empire, inhabited. . . . In the district of these Forest Cantons no remains of lake inhabitancy have yet been found. . . . Yet none of the places where they are met with could have been more naturally suited for lake-dwellings than these. The three Forest Cantons began the political history of Switzerland, having established among themselves that political centre round which the other Cantons clustered. In ethnological history, they were the latest members of the Swiss family, since their territory remained without occupants after the more accessible portions of the country had been peopled. In the same sense, the canton from which the confederation derived its name—that of Schwytz—is the youngest of all. When the Irish monk, afterwards canonised as St. Gall, settled near the Lake of Constance in the 7th century, he had gone as completely to the one extreme of the inhabited world, as his brother Columba had gone to the other when he sailed to Iona. If the districts of Thurgau, Appenzell, and St. Gall were at that period becoming gradually inhabited, it is supposed that Schwytz was not occupied by a permanent population until the latter half of the 9th century. . . . M. Rilliet [in 'Les Origines de la Confédération Suisse,' par Albert Rilliet] is one of the first writers who has applied himself to the study of . . . original documents [title-deeds of property, the chartularies of religious houses, records of litigation, etc.] as they are still preserved in Switzerland, for the purpose of tracing the character and progress of the Swiss people and of their free institutions. It was among the accidents propitious to the efforts of the Forest Cantons, that, among the high feudal or manorial rights existing within their territory, a large proportion was in the hands of monastic bodies. Throughout Europe the estates of the ecclesiastics were the best husbanded, and inhabited by the most prosperous vassals. These bodies ruled their vassals through the aid of a secular officer, a Vogt or advocate, who sometimes was the master, sometimes the servant, of the community. In either case there

was to some extent a division of rule, and it was not the less so that in these Cantons the larger estates were held by nuns. The various struggles for supremacy in which emperors and competitors for empire, the successive popes, and the potentates struggling for dominion, severally figured, gave many opportunities to a brave and sagacious people, ever on the watch for the protection of their liberties; but the predominant feature in their policy — that, indeed, which secured their final triumph — was their steady adherence in such contests to the Empire, and their acknowledgment of its supremacy. This is the more worthy of notice since popular notions of Swiss history take the opposite direction, and introduce us to the Emperor and his ministers as the oppressors who drove an exasperated people to arms. In fact, there still lurk in popular history many fallacies and mistakes about the nature of the 'Holy Roman Empire' as an institution of the middle ages [see ROMAN EMPIRE, THE HOLY]. . . . It is not natural or easy indeed to associate that mighty central organisation with popular liberty and power; and yet in the feudal ages it was a strong and effective protector of freedom. . . . Small republics and free cities were scattered over central Europe and protected in the heart of feudalism. . . . M. Rilliet aptly remarks, that in the Swiss valleys, with their isolating mountains, and their narrow strips of valuable pasture, political and local conditions existed in some degree resembling those of a walled city." The election, in 1273, of Rudolph of Hapsburg, as King of the Romans, was an event of great importance in the history of the Swiss Cantons, owing to their previous connexion with the House of Hapsburg (see AUSTRIA: A. D. 1246–1282), "a connexion geographically so close that the paternal domains, whence that great family takes its ancient name, are part of the Swiss territory at the present day." Such agencies as belonged naturally to the most powerful family in the district fell to the House of Hapsburg. Its chiefs were the chosen advocates or champions of the religious communities neighbor to them; and "under such imperial offices as are known by the title Bailiff, Procurator, or Reichsvogt, they occasionally exercised what power the Empire retained over its free communities. Such offices conferred authority which easily ripened into feudal superiorities, or other forms of sovereignty. M. Rilliet attributes considerable, but not, it seems to us, too much importance to a rescript bearing date the 26th May, 1231. It is granted by Henry VII., King of the Romans, or more properly of the aggregated German communities, as acting for his father, the Emperor Frederic II. This instrument revokes certain powers over the people of the community of Uri, which had been granted at a previous time by Frederic himself to the Count of Hapsburg. It addresses the people of Uri by the term Universitas — high in class among the enfranchised communities of the Empire — and promises to them that they shall no more under any pretext be withdrawn from the direct jurisdiction of the Empire. . . . The great point reached through this piece of evidence, and corroborated by others, is, that at this remote period the district which is now the Canton of Uri was dealt with as a Roman Universitas — as one of the communities of the Empire, exempt from the immediate authority of any feudal chief. . . . M. Rilliet's researches show that Uri is the Canton in which the character of a free imperial community was first established, perhaps we should rather say it was the Canton in which the privilege was most completely preserved from the dangers that assailed it. The Hapsburgs and their rivals had a stronger hold on Schwytz. . . . In many of the documents relating to the rights of Rudolph over this district, bearing date after he became Cæsar, it is uncertain whether he acts as emperor or as immediate feudal lord. . . . Rudolph, however, found it, from whatever cause, his policy to attach the people of Schwytz to his interests as emperor rather than as feudal lord; and he gave them charters of franchise which seem ultimately to have made them, like their neighbours of Uri, a free community of the Empire, or to have certified their right to that character. In the fragmentary records of the three Cantons, Unterwalden does not hold rank as a free community of the Empire at so early a time even as Schwytz. It is only known that in 1291 Unterwalden acted with the other two as an independent community. In the disputes for supremacy between the Empire and the Church all three had been loyal to the Empire. There are some indications that Rudolph had discovered the signal capacity of these mountaineers for war, and that already there were bands of Swiss among the imperial troops. The reign of Rudolph lasted for 18 years. . . . During his 18 years of possession he changed the character of the Cæsarship, and the change was felt by the Swiss. In the early part of his reign he wooed them to the Empire — before its end he was strengthening the territorial power of his dynasty. . . . When Rudolph died in 1291, the imperial crown was no longer a disputable prize for a chance candidate. There was a conflict on the question whether his descendants should take it as a hereditary right, or the electors should show that they retained their power by another choice. The three Cantons felt that there was danger to their interests in the coming contest, and took a great step for their own protection. They formed a league or confederacy [Eidgenossenschaft] for mutual co-operation and protection. Not only has it been handed down to us in literature, but the very parchment has been preserved as a testimony to the early independence of the Forest Cantons, the Magna Charter of Switzerland. This document reveals the existence of unexplained antecedents by calling itself a renewal of the old league — the Antique Confederatio. . . . Thus we have a Confederation of the Three Cantons, dated in 1291, and referring to earlier alliances; while popular history sets down the subsequent Confederation of 1314 as the earliest, for the purpose of making the whole history of Swiss independence arise out of the tragic events attributed to that period. If this leads the way to the extinction of the story on which the Confederation is based, there is compensation in finding the Confederation in active existence a quarter of a century earlier. But the reader will observe that the mere fact of the existence of this anterior league overturns the whole received history of Switzerland, and changes the character of the alleged struggle with the House of Austria, prior to the battle of Morgarten. There is nothing in this document or in contemporary events breathing of disloyalty to the Empire. The two parties whom the Swiss

held in fear were the Church, endeavouring to usurp the old prerogatives of the Empire in their fullness; and the feudal barons, who were encroaching on the imperial authority. Among the three the Swiss chose the chief who would be least of a master. . . . Two years before the end of the 13th century [by the election of Albert, son of Rudolph, the Hapsburg family] . . . again got possession of the Empire, and retained it for ten years. It passed from them by the well-known murder of the Emperor Albert. The Swiss and that prince were ill-disposed to each other at the time of the occurrence, and indeed the murder itself was perpetrated on Swiss ground; yet it had no connexion with the cause of the quarrel which was deepening between the House of Hapsburg and the Cantons. . . . There exist in contemporary records no instances of wanton outrage and insolence on the Hapsburg side. It was the object of that power to obtain political ascendancy, not to indulge its representatives in lust or wanton insult. . . . There are plentiful records of disputes in which the interests of the two powers were mixed up with those of particular persons. Some of these were trifling and local, relating to the patronage of benefices, the boundaries of parishes, the use of meadows, the amount of toll duties, and the like; others related to larger questions, as to the commerce of the lake of the Four Cantons, or the transit of goods across the Alps. But in these discussions the symptoms of violence, as is natural enough, appear rather on the side of the Swiss communities than on that of the aggrandising imperial house. The Canton of Schwytz, indeed, appears to have obtained by acts of violence and rapacity the notoriety which made its name supreme among the Cantons. . . . We are now at a critical point, the outbreak of the long War of Swiss Independence, and it would be pleasant if we had more distinct light than either history or record preserves of the immediate motives which brought Austria to the point of invading the Cantons. . . . The war was no doubt connected with the struggle for the Empire [between Frederic of Austria and Louis of Bavaria — see GERMANY: A. D. 1314–1347]; yet it is not clear how Frederic, even had he been victorious over the three Cantons, could have gained enough to repay him for so costly an expedition. . . . We are simply told by one party among historical writers that his army was sent against his rebellious subjects to reduce them to obedience, and by the other that it was sent to conquer for the House of Hapsburg the free Cantons. That a magnificent army did march against them, and that it was scattered and ruined by a small body of the Swiss at Morgarten, on the 15th November, 1315, is an historical event too clearly attested in all its grandeur to stand open to dispute. After the battle, the victorious Cantons renewed their Confederation of 1291, with some alterations appropriate to the change of conditions. The first bond or confederation comes to us in Latin, the second is in German. . . . Such was the base around which the Cantons of the later Swiss Confederation were gradually grouped. . . . To this conclusion we have followed M. Rilliet without encountering William Tell, or the triumvirate of the meadow of Rütli, and yet with no consciousness that the part of Hamlet has been left out of the play." According to the popular tradition, the people of the Three Cantons were maddened by wanton outrages and insolences on the part of the Austrian Dukes, until three bold leaders, Werner Stauffacher, Arnold of the Melkthal, and Walter Fürst, assembled them in nightly meetings on the little meadow of Grütli or Rütli, in 1307, and bound them by oaths in a league against Austria, which was the beginning of the Swiss Confederation. This story, and the famous legend of William Tell, connected with it, are fading out of authentic history under the light which modern investigation has brought to bear on it.—*The Legend of Tell and Rütli* (*Edinburgh Rev., January*, 1869).

A. D. 1207-1401.—Extension of the dominions of the House of Savoy beyond Lake Geneva.—The city of Geneva surrounded. See SAVOY: 11–15TH CENTURIES.

A. D. 1332-1460.—The extension of the old Confederation, or "Old League of High Germany."—The Three Cantons increased to Eight.—"All the original cantons were German in speech and feeling, and the formal style of their union was 'the Old League of High Germany.' But in strict geographical accuracy there was . . . a small Burgundian element in the Confederation, if not from the beginning, at least from its aggrandizement in the 13th and 14th centuries. That is to say, part of the territory of the states which formed the old Confederation lay geographically within the kingdom of Burgundy, and a further part lay within the Lesser Burgundy of the Dukes of Zähringen. But, by the time when the history of the Confederation begins, the kingdom of Burgundy was pretty well forgotten, and the small German-speaking territory which it took in at its extreme north-east corner may be looked on as practically German ground. . . . It is specially needful to bear in mind, first, that, till the last years of the 13th century, not even the germ of modern Switzerland had appeared on the map of Europe; secondly, that the Confederation did not formally become an independent power till the 17th century; lastly, that, though the Swiss name had been in common use for ages, it did not become the formal style of the Confederation till the 19th century. Nothing in the whole study of historical geography is more necessary than to root out the notion that there has always been a country of Switzerland, as there has always been a country of Germany, Gaul, or Italy. And it is no less needful to root out the notion that the Swiss of the original cantons in any way represent the Helvetii of Cæsar. The points to be borne in mind are that the Swiss Confederation is simply one of many German Leagues, which was more lasting and became more closely united than other German Leagues — that it gradually split off from the German Kingdom — that in the course of this process, the League and its members obtained a large body of Italian and Burgundian allies and subjects — lastly, that these allies and subjects have in modern times been joined into one Federal body with the original German Confederates. The three Swabian lands [the Three Forest Cantons] which formed the kernel of the Old League lay

at the point of union of the three Imperial kingdoms, parts of all of which were to become members of the Confederation in its later form. . . . The Confederation grew for a while by the admission of neighbouring lands and cities as members of a free German Confederation, owning no superior but the Emperor. First of all [1332], the city of Luzern joined the League. Then came the Imperial city of Zürich [1351], which had already begun to form a little dominion in the adjoining lands. Then [1352] came the land of Glarus and the town of Zug with its small territory. And lastly came the great city of Bern [1353], which had already won a dominion over a considerable body of detached and outlying allies and subjects. These confederate lands and towns formed the Eight Ancient Cantons. Their close alliance with each other helped the growth of each canton separately, as well as that of the League as a whole. Those cantons whose geographical position allowed them to do so, were thus able to extend their power, in the form of various shades of dominion and alliance, over the smaller lands and towns in their neighbourhood. . . . Zürich, and yet more Bern, each formed, after the manner of an ancient Greek city, what in ancient Greece would have passed for an empire. In the 15th century [1415–1460], large conquests were made at the expense of the House of Austria, of which the earlier ones were made by direct Imperial sanction. The Confederation, or some or other of its members, had now extended its territory to the Rhine and the Lake of Constanz. The lands thus won, Aargau, Thurgau, and some other districts, were held as subject territories in the hands of some or other of the Confederate States. . . . No new states were admitted to the rank of confederate cantons. Before the next group of cantons was admitted, the general state of the Confederation and its European position had greatly changed. It had ceased to be a purely German power. The first extension beyond the original German lands and those Burgundian lands which were practically German began in the direction of Italy. Uri had, by the annexation of Urseren, become the neighbour of the Duchy of Milan, and in the middle of the 15th century, this canton acquired some rights in the Val Levantina on the Italian side of the Alps. This was the beginning of the extension of the Confederation on Italian ground. But far more important than this was the advance of the Confederates over the Burgundian lands to the west."—E. A. Freeman, *Historical Geog. of Europe, ch.* 8, *sect.* 6.

A. D. 1386-1388.—Austrian defeats at Sempach and Naefels. — "Seldom, if ever, has Switzerland seen a more eventful month than that of July, 1386, for in that month she fought and won the ever-memorable battle of Sempach. To set down all the petty details as to the causes which led to this engagement would be tedious indeed. It is sufficient to point out . . . that there is seldom much love lost between oppressor and oppressed, and Austria and the Swiss Confederation had for some time held that relation to each other. A ten years' peace had indeed been concluded between the two powers, but it was a sham peace, and the interval had been used by both to prepare for new conflicts. . . . Zurich laid siege to Rapperswyl with the intent to destroy the odious Austrian toll-house; Lucerne levelled with the ground the Austrian fort Rothenburg, and entered into alliances with Entlebuch and Sempach to overthrow the Austrian supremacy. This was equal to a declaration of war, and war was indeed imminent. Duke Leopold III., of Austria, was most anxious to bring the quarrel to an issue, and to chastise the insolent Swiss citizens and peasantry. . . . The nobles of Southern Germany rallied round the gallant swordsman, and made him their leader in the expeditions against the bourgeoisie and peasantry. And no sooner had the truce expired (June, 1386), than they directed their first attack on the bold Confederation. . . . Leopold's plan was to make Lucerne the centre of his military operations, but in order to draw away attention from his real object, he sent a division of 5,000 men to Zurich to simulate an attack on that town. Whilst the unsuspecting Confederates lay idle within the walls of Zurich, he gathered reinforcements from Burgundy, Swabia, and the Austro-Helvetian Cantons, the total force being variously estimated at from 12,000 to 24,000 men. He marched his army in the direction of Lucerne, but by a round-about way, and seized upon Willisan, which he set on fire, intending to punish Sempach 'en passant' for her desertion. But the Confederates getting knowledge of his stratagem left Zurich to defend herself, and struck straight across the country in pursuit of the enemy. Climbing the heights of Sempach, . . . they encamped at Meyersholz, a wood fringing the hilltop. The Austrians leaving Sursee, for want of some more practicable road towards Sempach, made their way slowly and painfully along the path which leads from Sursee to the heights, and then turns suddenly down upon Sempach. Great was their surprise and consternation when at the junction of the Sursee and Hiltisrieden roads they came suddenly upon the Swiss force. . . . The Swiss . . . drew up in battle order, their force taking a kind of wedge-shaped mass, the shorter edge foremost, and the bravest men occupying the front positions. . . . The onset was furious, and the Austrian Hotspurs, each eager to outstrip his fellows in the race for honour, rushed on the Swiss, drove them back a little, and then tried to encompass them and crush them in their midst. . . . All the fortune of the battle seemed against the Swiss, for their short weapons could not reach a foe guarded by long lances. But suddenly the scene changed. 'A good and pious man,' says the old chronicler, deeply mortified by the misfortune of his country, stepped forward from the ranks of the Swiss — Arnold von Winkelried. Shouting to his comrades in arms, 'I will cut a road for you; take care of my wife and children!' he dashed on the enemy, and, catching hold of as many spears as his arms could encompass, he bore them to the ground with the whole weight of his body. His comrades rushed over his corpse, burst through the gap made in the Austrian ranks, and began a fierce hand-to-hand encounter. . . . A fearful carnage followed, in which no mercy was shown, and there fell of the common soldiers 2,000 men, and no fewer than 700 of the nobility. The Swiss lost but 120 men. . . . This great victory . . . gave to the Confederation independence, and far greater military and political eminence. . . . The story of Winkelried's heroic action has given rise to much fruitless but interesting discussion.

The truth of the tale, in fact, can neither be confirmed nor denied, in the absence of any sufficient proof. But Winkelried is no myth, whatever may be the case with the other great Swiss hero, Tell. · There is proof that a family of the name of Winkelried lived at Unterwalden at the time of the battle. . . . The victory of Naefels [April, 1388] forms a worthy pendant to that of Sempach. . . . The Austrians, having recovered their spirits after the terrible disaster," invaded the Glarus valley in strong force, and met with another overthrow, losing 1,700 men. "In 1389 a seven years' peace was arranged. . . . This peace was first prolonged for 20 years, and afterwards, in 1412, for 50 years."— Mrs. L. Hug and R. Stead, *The Story of Switzerland, ch.* 15.

A. D. 1396-1499.—The Grey Leagues.—Democratic Independence of Graubünden (Grisons) achieved.—Their Alliance with the Swiss Cantons.—The Swabian War.—Practical separation of the Confederacy from the Empire.— "It was precisely at this epoch [the later years of the 14th century] that the common people of Graubünden [or the Grisons] felt the necessity of standing for themselves alone against the world. Threatened by the Habsburgs, suspicious of the See of Chur [see TYROL], ill-governed by their decadent dynastic nobles, encouraged by the example of the Forest Cantons, they began to form leagues and alliances for mutual protection and the preservation of peace within the province. Nearly a century was occupied in the origination and consolidation of those three Leagues which turned what we now call Graubünden into an independent democratic state. . . . The town of Chur, which had been steadily rising in power, together with the immediate vassals of the See, took the lead. They combined into an association, which assumed the name of the Gotteshausbund; and of which the Engadine [the upper valley of the Inn] formed an important factor. Next followed a league between the Abbot of Dissentis, the nobles of the Oberland, the Communes of that district, and its outlying dependencies. This was called the Grey League — according to popular tradition because the folk who swore it wore grey serge coats, but more probably because it was a League of Counts, Gräfen, Grawen. The third league was formed after the final dispersion of the great inheritance of Vaz, which passed through the Counts of Toggenburg into the hands of females and their representatives. This took the name of Zehn Gerichte, or Ten Jurisdictions, and embraced Davos, Belfort, Schanfigg, the Prättigau, and Maienfeld. The date of the formation of the Gotteshausbund is uncertain; but its origin may be assigned to the last years of the 14th century [some writers date it 1396]. That of the Grey League, or Graue Bund, or Obere Theil, as it is variously called, is traditionally 1424. (It is worth mentioning that this League took precedence of the other two, and that the three were known as the Grey Leagues.) That of the Zehn Gerichte is 1438. In 1471 these three Leagues formed a triple alliance, defensive and offensive, protective and aggressive, without prejudice to the Holy Roman Empire of which they still considered themselves to form a part, and without due reservation of the rights acquired by inheritance or purchase by the House of Austria within their borders. This important revolution, which defeudalized a considerable Alpine territory, and which made the individual members of its numerous Communes sovereigns by the right of equal voting, was peaceably effected. . . . The constitution of Graubünden after the formation of the Leagues, in theory and practise, . . . was a pure democracy, based on manhood suffrage. . . . The first difficulties with which this new Republic of peasants had to contend, arose from the neighbourhood of feudal and imperial Austria. The Princes of the House of Habsburg had acquired extensive properties and privileges in Graubünden. . . . These points of contact became the source of frequent rubs, and gave the Austrians opportunities for interfering in the affairs of the Grey Leagues. A little war which broke out in the Lower Engadine in 1475, a war of raids and reprisals, made bad blood between the people of Tirol and their Grisons neighbours. But the real struggle of Graubünden with Austria began in earnest, when the Leagues were drawn into the so-called Swabian War (1496–1499). The Emperor Maximilian promoted an association of south German towns and nobles, in order to restore his Imperial authority over the Swiss Cantons. They resisted his encroachments, and formed a close alliance with the Grey Leagues. That was the commencement of a tie which bound Graubünden, as a separate political entity, to the Confederation, and which subsisted for several centuries. Graubünden acted as an independent Republic, but was always ready to cooperate with the Swiss. . . . Fighting side by side [in the Swabian War] with the men of Uri, Glarus, Zürich, the Bündners learned the arts of warfare in the lower Rheinthal. Afterwards, in 1499, they gained the decisive battle of this prolonged struggle on their own ground and unassisted. In a narrow gorge called Calven, just where the Münsterthal opens out into the Vintschgau above Glurns, 5,000 men of the Grey Leagues defeated the whole chivalry and levies of Tirol. Many thousands of the foe (from 4,000 to 5,000 is the mean estimate) were left dead upon the field." Maximilian hastened to the scene with a fresh army, but found only deserted villages, and was forced by famine to retreat. "The victory of Calven raised the Grisons to the same rank as the Swiss, and secured their reputation in Europe as fighting men of the best quality. It also led to a formal treaty with Austria, in which the points at issue between the two parties were carefully defined."— J. A. Symonds, *Hist. of Graubünden (in Strickland's "The Engadine," pp.* 29–33).— During the Swabian War, in 1499, the Swiss concluded a treaty with France. "Willibald Pirkheimer, who was present with 400 red-habited citizens of Nuremberg, has graphically described every incident of this war. The imperial reinforcements arrived slowly and in separate bodies; the princes and nobles fighting in real earnest, the cities with little inclination. The Swiss were, consequently, able to defeat each single detachment before they could unite, and were in this manner victorious in ten engagements." The Emperor, "dividing his forces, despatched the majority of his troops against Basle, under the Count von Fürstenburg, whilst he advanced towards Geneva, and was occupied in crossing the lake when the news of Fürstenburg's defeat and death, near Dornach, arrived. The princes, little desirous of staking their honour against their low-born opponents, instantly returned home in great numbers, and the emperor

was therefore compelled to make peace [1499]. The Swiss retained possession of the Thurgau and of Basle, and Schaffhausen joined the confederation, which was not subject to the imperial chamber, and for the future belonged merely in name to the empire, and gradually fell under the influence of France."— W. Menzel, *Hist. of Germany, ch.* 191 (*v.* 2).

A. D. 1476-1477. — Defeat of Charles the Bold. See BURGUNDY (THE FRENCH DUKEDOM): A. D. 1476–1477.

A. D. 1481-1501.—Disagreements over the spoils of the war with Charles the Bold.— Threatened rupture. — The Convention of Stanz.— Enlargement of the Confederacy.— Its loose and precarious constitution.—"In the war with Charles the Bold, Bern had gained greatly in extent on the west, while the immense booty taken in battle and the tributes laid on conquered cities seemed to the country cantons to be unfairly divided, for all were supposed to receive an equal share. The cities protested that it was no fair division of booty to give each one of the country states, who had altogether furnished 14,000 men for the war, an even share with Bern which had sent out 40,000. Another bone of contention was the enlargement of the union. The cities had for a long time desired to bring the cantons of Freiburg and Solothurn into the League. . . . But these were municipal governments, and the Forest States, unwilling to add more to the voting strength of the cities and thereby place themselves in the minority, refused again and again to admit these cantons. The situation daily grew more critical. Schwyz, Uri, and Unterwalden made an agreement with Glarus to stand by each other in case of attack. Luzern, Bern, and Zürich made a compact of mutual citizenship, a form of agreement by which they sought to circumvent the oath they had taken in the League of Eight to enter into no new alliances. Just at this point there was alleged to have been discovered a plot to destroy the city of Luzern by countrymen of Obwalden and Entlibuch. The cities were thrown into a frenzy and peace was strained to the utmost. Threats and recriminations passed from side to side, but finally, as an almost hopeless effort toward reconciliation, a Diet was called to meet at Stanz on the 8th of December, 1481. The details of this conference read like romance, so great was the transformation which took place in the feelings of the confederates. . . . Just as the Diet was about to break up in confusion a compromise was effected, and an agreement was drawn up which is known as the Convention of Stanz (Stanzerverkomniss). . . . As to the matter latest in contention, it was agreed that movable booty should be divided according to the number of men sent into war, but new acquisitions of territory should be shared equally among the states participating. Thus the principle of state-rights was preserved and the idea of popular representation received its first, and for 300 years almost its only recognition. In another agreement, made the same day, Freiburg and Solothurn were admitted to the League on equal terms with the others. In 1501 the confederation was enlarged by the admission of Basel, which, on account of its situation and importance, was a most desirable acquisition, and in the same year the addition of Schaffhausen, like Basel, a free imperial city with outlying territories, still further strengthened the Union. The next, and for 285 years the last, addition to the inner membership of the alliance was Appenzell. . . . Connected with the confederacy there were, for varying periods and in different relationships, other territories and cities more or less under its control. One class consisted of the so-called Allied Districts ('Zugewandte and Verbündete Orte'), who were attached to the central body not as equal members, but as friends for mutual assistance. This form of alliance began almost with the formation of the league, and gradually extended till it included St. Gallen, Biel, Neuchatel, the Bishopric of Basel (which territory lay outside the city), the separate confederacies of Graubünden and Valais, Geneva and several free imperial cities of Germany, at one time so distant as Strassburg. More closely attached to the confederation were the 'Gemeine Vogteien,' or subject territories [Aargau, Thurgau, etc.], whose government was administered by various members of the league in partnership. These lands had been obtained partly by purchase or forfeiture of loans and partly by conquest. . . . Before the middle of the 16th century nearly all the territory now included in Switzerland was in some way connected with the confederation. Upon this territorial basis of states, subject lands and allies, the fabric of government stood till the close of the 18th century. It was a loose confederation, whose sole organ of common action was a Diet in which each state was entitled to one vote. . . . Almost the only thread that held the Swiss Confederation together was the possession of subject lands. In these they were interested as partners in a business corporation. . . . These common properties were all that prevented complete rupture on several critical occasions."—J. M. Vincent, *State and Federal Gov't in Switzerland, ch.* 1.

A. D. 1519-1524.—Beginning of the Reformation at Zurich, under Zwingli. See PAPACY: A. D. 1519–1524.

A. D. 1528-1531.—The spreading of the Reformation.—Adhesion of the Forest Cantons to Romanism.—Differences between the Swiss Reformers and the German Protestants.—The Conference at Marburg.— Civil war among the Cantons.—Death of Zwingli.— From Zurich, "the reformed faith penetrated, but only gradually, into the northern and eastern cantons. Bern was reached in 1528, after a brilliant disputation held in that city. Basel and Schaffhausen followed in 1529, and then St. Gall, Appenzell, Graubünden, and Solothurn, though some of them had serious struggles within themselves and fell in only partly with the reforms. But in the Central or Forest Cantons it was that the fiercest opposition was encountered. . . . From the very simplicity of their lives the people ignored the degeneracy of the priesthood, and amongst these pastoral peoples the priests were of simpler manners and more moral life than those in the cities; they disliked learning and enlightenment. Then there was the old feeling of antipathy to the cities, coupled with a

strong dislike for the reforms which had abolished 'Reislaufen' [military service under foreign pay], that standing source of income to the cantons. Lucerne, bought with French gold, struggled with Zurich for the lead. So far was the opposition carried that the Catholic districts by a majority of votes insisted (at the Diet) on a measure for suppressing heresy in Zurich, whilst some were for expelling that canton from the league. The Forest Cantons issued orders that Zwingli should be seized should he be found within their territories; consequently he kept away from the great convocation at Baden, 1526. . . . Wider and wider grew the chasm between the two religious parties, and Zwingli at length formed a 'Christian League' between the Swiss Protestants and some of the German cities and the Elector of Hesse. On the other hand, the Catholics entered into an alliance with Ferdinand of Austria, a determined enemy to the reformed religion. At last the Protestant party was exasperated beyond bearing, and Zurich declared war on the Forest Cantons, Zwingli himself joining in the vicissitudes of the campaign. His camp presented the 'picture of a well-organized, God-fearing army of a truly Puritan stamp.' The encounter at Kappel, in June, 1529, however, took a peaceful turn, thanks to the mediation of Landammann Aebli, of Glarus, greatly to the disgust of Zwingli, who prophetically exclaimed that some day the Catholics would be the stronger party, and then they would not show so much moderation. All ill-feeling, indeed, subsided when the two armies came within sight of each other. The curious and touching episode known as the 'Kappeler Milchsuppe' took place here. A band of jolly Catholics had got hold of a large bowl of milk, but lacking bread they placed it on the boundary line between Zug and Zurich. At once a group of Zurich men turned up with some loaves, and presently the whole party fell to eating the 'Milchsuppe' right merrily. A peace was concluded on the 29th of June, 1529, by which the Austrian League was dissolved, and freedom of worship granted to all. . . . By his treatise, 'De verâ et falsâ religione' (1525), Zwingli had, though unwillingly, thrown the gauntlet into the Wittenberg camp. The work was intended to be a scientific refutation of the Catholic doctrine of transubstantiation, and a war of words arose. The contest was by each disputant carried on 'suo more;' by Luther with his usual authoritative and tempestuous vehemence, by Zwingli in his own cool reasoning, dignified, and courteous style and republican frankness. Presently there came a strong desire for a union between the German Protestants, and the Swiss Reformers [called Sacramentarians by the Lutherans], . . . the impulse to it being given by Charles V.'s 'Protest' against the Protestants. Landgrave Philip of Hesse, the political leader of the German reformers, invited Luther and Zwingli to meet at his castle of Marburg [1529], with the view of reconciling the two sections. The religious colloquium was attended by many savants, princes, nobles, and all the chief leaders of the Reformation, and might have done great things, but came to grief through the obstinacy of Luther, as is well known, or rather through his determination to approve of no man's views except they should agree exactly with his own. Luther insisted on a literal interpretation of the words 'This is my body,' whilst Zwingli saw in them only a metaphorical or symbolical signification. . . . To return for a moment to home politics. The peace of 1529 was a short-lived one. Zwingli, anxious only to spread the reformed faith over the whole republic, did not realize clearly the hatred of the Forest district against the new creed. . . . War was imminent, and was indeed eagerly desired on both sides. Bern, finding that war was likely to be injurious to her private ends, insisted on a stoppage of mercantile traffic between the opposing districts, but Zwingli scorned to use such a means to hunger the enemy and so bring them to submit. However Zurich was outvoted in the Christian League (May 16th), and the Forest was excluded from the markets of that city and Bern. The rest may be easily guessed. On Zurich was turned all the fury of the famished Forest men, and they sent a challenge in October, 1531. A second time the hostile armies met at Kappel, but the positions were reversed. Zurich was unprepared to meet a foe four times as numerous as her own, and Bern hesitated to come to her aid. However Göldlin, the captain of the little force, recklessly engaged with the opposing army, whether from treachery or incapacity is not known, but he was certainly opposed to the reformed faith. Zwingli had taken leave of his friend Bullinger, as though foreseeing his own death in the coming struggle, and had joined the Zurich force. He was with the chief banner, and, with some 500 of his overmatched comrades, fell in the thickest of the battle. . . . But the reformation was far too deeply rooted to be thus destroyed. Bullinger, the friend of Zwingli, and, later on, of Calvin, worthily succeeded to the headship of the Zurich reformers."—Mrs. L. Hug and R. Stead, *Switzerland, ch.* 22.

A. D. 1531-1648.—Religious divisions and conflicts.—Annexations of territory.—Peace with the Duke of Savoy.—The coming of Protestant refugees.—Industrial progress.—Peace.—"A peace at Dennikon in 1531 marks the acknowledgement of the principle of each Canton's independence. . . . The Confederacy was now fatally divided. There is, perhaps, no other instance of a State so deeply and so permanently sundered by the Reformation. Other governments adopted or rejected the reformed religion for their dominions as a whole; the Confederacy, by its constitution, was constrained to allow each Canton to determine its religion for itself; and the presence of Catholic and Reformed States side by side, each clinging with obstinacy to the religion of their choice, became the origin of jealousies and wars which have threatened more than once to rend asunder the ties of union. Next to the endless but uninteresting theme of religious differences comes the history of the annexations" by which the Confederacy extended its limits. "In the direction of the Jura was a country divided between many governments, which the princes of Savoy, the Hapsburgs of the West, had once effectually ruled, but which had become morselled among many claimants during a century and a half of weakness, and which Duke Charles III. of Savoy was now seeking to reconcile to his authority. Geneva was

the chief city of these parts. . . . Factions in favour of or against [the rule of the Duke of Savoy] . . . divided the city [see GENEVA: A. D. 1504–1535]. The alliance of Bern and Freyburg was at length sought for; and the conclusion of a treaty of co-citizenship in 1526 opened at once the prospect of a collision between the House of Savoy and the Confederacy. That collision was not long delayed. In 1536, after repeated acts of provocation by Charles III., 7,000 men of Bern appeared within Geneva. To reach the city they had traversed the Pays de Vaud; after entering it they passed onwards to the provinces of Gex and Chablais. All that they traversed they annexed. Even the city which they had entered they would have ruled, had not some sparks of honour and the entreaties of its inhabitants restrained them from the annihilation of the liberties which they had been called on to defend. The men of Freyburg and of the Valais at the same time made humbler conquests from Savoy. Later, the strong fortress of Chillon, and the rich bishopric of Lausanne, were seized upon by Bern. A wide extent of territory was thus added to the Confederacy; and again a considerable population speaking the French tongue was brought under the dominion of the Teutonic Cantons. These acquisitions were extended, in 1555, by the cession of the county of Gruyère, through the embarrassments of its last impoverished Count. They were diminished, however, by the loss of Gex and Chablais in 1564. The jealousy of many of the cantons at the good fortune of their confederates, and the reviving power of the House of Savoy, had made the conquests insecure. Emmanuel Philibert, the hero of St. Quentin, the ally of the great sovereigns of France and Spain, asked back his provinces; and prudence counselled the surrender of the two, in order to obtain a confirmation of the possession of the rest [see SAVOY AND PIEDMONT: A. D. 1559–1580]. The southern side of the Lake Leman, which had thus been momentarily held, and which nature seemed to have intended to belong to the Confederacy, was thus abandoned. The frontiers, however, which were now secured became permanent ones. The Dukes of Savoy had transferred much of their ambition, with their capital, beyond the Alps; and the Confederates remained secure in their remaining possessions. The Confederacy might now have added further to its power by admitting new members to its League. . . . Constance . . . had urged its own incorporation. The religious tendencies of its inhabitants, however, had made it suspected; and it was allowed to fall, in 1548, without hope of recovery, under the dominion of Austria. Geneva . . . was pleading loudly for admission. The jealousy of Bern, and later the hostility of the Catholic Cantons to the faith of which the city had become the centre, refused the request. She remained a mere ally, with even her independence not always ungrudgingly defended against the assaults of her enemies. Religious zeal indeed was fatal during this century to political sagacity. Under its influence the alliance with the rich city of Mulhausen, which had endured for more than a hundred years, was thrown off in 1587; the overtures of Strasburg for alliance were rejected; the proposals of the Grisons Leagues were repulsed. The opportunities of the Confederates were thus neglected, while those of their neighbours became proportionately increased. . . . The progress that is to be traced during the 16th century is such as was due to the times rather than to the people. The cessation of foreign wars and the fewer inducements for mercenary service gave leisure for the arts of peace; and agriculture and trade resumed their progress. Already Switzerland began to be sought by refugees from England, France, and Italy. The arts of weaving and of dyeing were introduced, and the manufacture of watches began at Geneva. . . . War, which had been almost abandoned except in the service of others, comes little into the annals of the Confederation as a State. . . . As another century advances, there is strife at the very gates of the Confederation. . . . But the Confederacy itself was never driven into war."—C. F. Johnstone, *Historical Abstracts, ch.* 7.

A. D. 1579-1630.—The Catholic revival and rally.—The Borromean or Golden League.— "Pre-eminent amongst those who worked for the Catholic revival was the famous Carlo Borromeo, Archbishop of Milan and nephew of Pius IV. He lived the life of a saint, and in due time was canonized. To his see belonged the Swiss bailliages in the Ticino and Valtellina. Indefatigable in his labours, constantly visiting every part of his diocese, toiling up to the Alpine huts, he gathered the scattered flocks into the Papal fold, whether by mildness or by force. . . . For the spread of Catholic doctrines he hit upon three different means. He called into being the Collegium Helveticum in 1579 at Milan, where the Swiss priests were educated free. He sent the Jesuits into the country, and placed a nuncio at Lucerne, in 1580. In 1586 was signed, between the seven Catholic cantons, the Borromean or Golden League, directed against the reformers, and in the following year a coalition was, by the same cantons, excepting Solothurn, entered into with Philip of Spain and with Savoy. The Jesuits settled themselves in Lucerne and Freiburg, and soon gained influence amongst the rich and the educated, whilst the Capuchins, who fixed themselves at Altorf, Stanz, Appenzell, and elsewhere, won the hearts of the masses by their lowliness and devotion. In this way did Rome seek to regain her influence over the Swiss peoples, and the effect of her policy was soon felt in the semi-Protestant and subject lands. . . . In the Valais, the Protestant party, though strong, was quite swept out by the Jesuits, before 1630."—Mrs. L. Hug and R. Stead, *Switzerland, ch.* 25.

A. D. 1652-1789.—The Peasant Revolt and the Toggenburg War.—Religious conflicts.—Battles of Villmergen.—The Peace of Aarau.— "About the middle of the 17th century there was growing up, in all the cantons except the Waldstätten, a feeling of strong discontent among the peasants, who still suffered from

many of the tyrannies which had descended to them from the old days of serfdom. They felt the painful contrast between their lot and that of the three old cantons, where every peasant voted for his own magistrates and his own laws, and helped to decide the taxes and contributions which he should pay. . . . Now that their liberty had been proclaimed at Westphalia, they were inspired with the idea of trying to make it a reality. . . . They rose on the occasion of the reduction of the value of their copper coinage. . . . Opposition began among the Entlibuchers of Lucerne, a tall and sturdy race, that lived in the long, fertile valley on the banks of the Emmen. . . . Their spirit was soon quenched, however, by the threats of Zurich and Berne; but though they yielded for the moment, their example had spread, and there were popular risings, excited in the large canton of Berne by the same causes, which were not so easily checked. There was a second revolt in Lucerne, which was intended to be nothing less than a league of all the lower classes throughout the ten cantons. The peasants of Lucerne, Berne, Basel, Solothurn, and the territory of Aargau, all joined in this and held an assembly at Sumiswald, in April 1653, where they chose Nicholas Leuenberger as their chief, and proclaimed their purpose of making themselves free as the Small Cantons. To this union, unfortunately, they brought neither strength of purpose nor wisdom. . . . Meanwhile the cities were not idle. Zurich, the capital, gave the order for the whole confederacy to arm, in May 1653. The struggle was short and decisive. For a few weeks Leuenberger's soldiers robbed and murdered where they could, and made feeble and futile attempts upon the small cities of Aargau. Towards the end of May he met, near Herzogenbuchsee, the Bernese troops. . . . A desperate fight ensued, but the insurgents were soon overpowered. . . . This battle ended the insurrection." Leuenberger was beheaded. "No sooner was this revolt of the peasants over than the smouldering fires of religious hatred, zealously fanned by the clergy on both sides, broke out again. . . . Several families of Arth, in Schwyz had been obliged by the Catholics to abjure their faith, or fly from their homes." Zurich took up their cause, and "a general war broke out. . . . Berne first despatched troops to protect her own frontier, and then sent 40 banners to the help of Zurich." The Bernese troops were so careless that they allowed themselves to be surprised (January 14, 1656) by 4,000 Lucerners, in the territory of Villmergen, and were ruinously defeated, losing 800 men and eleven guns. "Soon afterwards a peace was concluded, where everything stood much as it had stood at the beginning of this war, which had lasted only nine weeks. . . . A second insurrection, on a smaller scale than the peasants' revolt, took place in St. Gall in the first years of the 18th century. The Swiss, free in the eyes of the outside world, were, as we have already seen, mere serfs in nearly all the cantons, and such was their condition in the country of Toggenburg. . . . The greater part of the rights over these estates had been sold to the abbot of St. Gall in 1468. In the year 1700, the abbey of St. Gall was presided over by Leodegar Burgisser as sovereign lord. . . . He began by questioning all the commune rights of the Toggenburgers, and called the people his serfs, in order that they might become so used to the name as not to rebel against the hardness of the condition. Even at the time when he became abbot, there was very little, either of right or privilege, remaining to these poor people. . . . When, in 1701, Abbot Leodegar ordered them to build and keep open, at their own expense, a new road through the Hummelwald, crushed as they had been, they turned." After much fruitless remonstrance and appeal they took up arms, supported by the Protestant cantons and attacked by the Catholics, with aid contributed by the nuncio of the pope, himself. "The contest was practically ended on the 25th of July, 1712, by a decisive victory by the Protestants on the battle-field of Villmergen, where they had been beaten by the Lucerne men 56 years before. The battle lasted four hours, and 2,000 Catholics were slain. . . . In the month of August, a general peace was concluded at Aarau, to the great advantage of the conquerors. The five Catholic cantons were obliged to yield their rights over Baden and Rapperswyl, and to associate Berne with themselves in the sovereignty over Thurgau and the Rheinfeld. By this provision the two religions became equalized in those provinces. . . . The Toggenburgers came once more under the jurisdiction of an abbot of St. Gall, but with improved rights and privileges, and under the powerful protection of Zurich and Berne. The Catholic cantons were long in recovering from the expenses of this war. . . . During 86 years from the peace of Aarau, the Swiss were engaged in neither foreign nor civil war, and the disturbances which agitated the different cantons from time to time were confined to a limited stage. But real peace and union were as far off as ever. Religious differences, plots, intrigues, and revolts, kept people of the same canton and village apart, until the building which their forefathers had raised in the early days of the republic was gradually weakened and ready to fall, like a house of cards, at the first blow from France."— H. D. S. Mackenzie, *Switzerland, ch.* 15-16.

Also in: H. Zschokke, *Hist. of Switzerland, ch.* 42-56.

A. D. 1792-1798.—The ferment of the French Revolution.— Invasion and subjugation by the French.— Robbing of the treasure of Berne.— Formation of the Helvetic Republic.—"The world rang with arms and cries of war, with revolutions, battles and defeats. The French promised fraternity and assistance to every people who wished to make themselves free. . . . Their arms advanced victorious through Savoy and the Netherlands and over the Rhine. Nearer and nearer drew the danger around the country of the Alpine people. But the government of the Confederate states showed no foresight in view of the danger. They thought themselves safe behind the shield of their innocence and their neutrality between the contending parties. They had no arms and prepared none; they had no strength and did not draw closer the bands of their everlasting compact. Each canton, timidly and in silence, cared for its own safety, but little for that of the others. . . . All kinds of pamphlets stirred up the people. At Lausanne, Vevey, Rolle and other places, fiery young men, in noisy assemblages, drank success to the arms of emancipated France. Although public order was nowhere disturbed by such proceedings, the gov-

ernment of Berne thought it necessary to put a stop to them by severe measures and to compel silence by wholesome fear. They sent plenipotentiaries supported by an armed force. The guilty and even the innocent were punished. More fled. This silenced Vaud, but did not quell her indignation. The fugitives breathed vengeance. . . . In foreign countries dwelt sadly many of those who, at various times, had been banished from the Confederacy because they had, by word or deed, too boldly or importunately defended the rights and freedom of their fellow-citizens. Several of these addressed the chiefs of the French republic. . . . Such addresses pleased the chiefs of France. They thought in their hearts that Switzerland would be an excellent bulwark for France, and a desirable gate, through which the way would be always open to Italy and Germany. They also knew of and longed for the treasures of the Swiss cities. And they endeavored to find cause of quarrel with the magistrates of the Confederates. . . . Shortly afterwards, came the great general Napoleon Buonaparte, and marched through Savoy into Italy against the forces of the emperor. . . . In a very few months, though in many battles, Buonaparte vanquished the whole power of Austria, conquered and terrified Italy from one end to the other, took the whole of Lombardy and compelled the emperor to make peace. He made Lombardy a republic, called the Cisalpine. When the subjects of Grisons in Valtelina, Chiavenna and Bormio saw this, they preferred to be citizens of the neighboring Cisalpine republic, rather than poor subjects of Grisons. For their many grievances and complaints were rarely listened to. But Buonaparte said to Grisons: 'If you will give freedom and equal rights to these people, they may be your fellow-citizens, and still remain with you. I give you time; decide and send word to me at Milan.'. . . When the last period for decision had passed, Buonaparte became indignant and impatient, and united Valtelina, Chiavenna and Bormio to the Cisalpine republic (22d Oct., 1797). . . . So the old limits of Switzerland were unjustly contracted; four weeks afterwards also, that part of the bishopric of Bâle which had hitherto been respected on account of its alliance with the Swiss, was added to France. Thereat great fear fell on the Confederates. . . . Then the rumor spread that a French army was approaching the frontiers of Switzerland to protect the people of Vaud. They had called for the intervention of France in virtue of ancient treaties. But report said that the French intended to overthrow the Confederate authorities and to make themselves masters of the country. . . . Almost the whole Confederacy was in a state of confusion and dissolution. The governments of the cantons, powerless, distrustful and divided, acted each for itself, without concert. . . . In the mean while a large army of French advanced. Under their generals Brune and Schauenberg they entered the territory of the Confederates, and Vaud, accepting foreign protection, declared herself independent of Berne. Then the governments of Switzerland felt that they could no longer maintain their former dominion. Lucerne and Schauffhausen declared their subjects free and united to themselves. Zurich released the prisoners of Stafa, and promised to ameliorate her constitution to the advantage of the people. . . . Even Freiburg now felt that the change must come for which Chenaur had bled. And the council of Berne received into their number 52 representatives of the country and said: 'Let us hold together in the common danger.' All these reforms and revolutions were the work of four weeks; all too late. Berne, indeed, with Freiburg and Solothurn, opposed her troops to the advancing French army. Courage was not wanting; but discipline, skill in arms and experienced officers. . . . On the very first day of the war (2d March, 1798), the enemy's light troops took Freiburg and Solothurn, and on the fourth (5th March), Berne itself. . . . France now authoritatively decided the future fate of Switzerland and said: 'The Confederacy is no more. Henceforward the whole of Switzerland shall form a free state, one and indivisible, under the name of the Helvetian republic. All the inhabitants, in country as well as city, shall have equal rights of citizenship. The citizens in general assembly shall choose their magistrates, officers, judges and legislative council; the legislative council shall elect the general government; the government shall appoint the cantonal prefects and officers.' The whole Swiss territory was divided into 18 cantons of about equal size. For this purpose the district of Berne was parcelled into the cantons of Vaud, Oberland, Berne and Aragau; several small cantons were united in one; as Uri, Schwyz, Unterwalden and Zug in the canton of Waldstatten; St. Gallen district, Rheinthal and Appenzell in the canton of Santis; several countries subject to the Confederacy, as Baden, Thurgau, Lugano and Bellinzona, formed new cantons. Valais was also added as one; Grisons was invited to join; but Geneva, Muhlhausen and other districts formerly parts of Switzerland, were separated from her and incorporated with France. So decreed the foreign conquerors. They levied heavy war-taxes and contributions. They carried off the tons of gold which Berne, Zurich and other cities had accumulated in their treasure-chambers during their dominion. . . . But the mountaineers of Uri, Nidwalden, Schwyz and Glarus, original confederates in liberty, said: 'In battle and in blood, our fathers won the glorious jewel of our independence; we will not lose it but in battle and in blood.' . . . Then they fought valiantly near Wollrau and on the Schindellegi, but unsuccessfully. . . . But Aloys Reding reassembled his troops on the Rothenthurm, near the Morgarten field of victory. There a long and bloody battle took place. . . . Thrice did the French troops renew the combat: thrice were they defeated and driven back to Aegeri in Zug. It was the second of May. Nearly 2,000 of the enemy lay slain upon that glorious field. Gloriously also fought the Waldstatten on the next day near Arth. But the strength of the heroes bled away in their very victories. They made a treaty, and, with sorrow in their hearts, entered the Helvetian republic. Thus ended the old Bond of the Confederates. Four hundred and ninety years had it lasted; in seventy-four days it was dissolved."—H. Zschokke, *The History of Switzerland, ch.* 57 *and* 60.—"A system of robbery and extortion, more shameless even than that practised in Italy, was put in force against the cantonal governments, against the monasteries, and against private individuals. In compensation for the material losses inflicted upon the country, the new Helvetic Republic, one and in-

divisible, was proclaimed at Aarau. It conferred an equality of political rights upon all natives of Switzerland, and substituted for the ancient varieties of cantonal sovereignty a single national government, composed, like that of France, of a Directory and two Councils of Legislature. The towns and districts which had been hitherto excluded from a share in government welcomed a change which seemed to place them on a level with their former superiors: the mountain-cantons fought with traditional heroism in defence of the liberties which they had inherited from their fathers; but they were compelled, one after another, to submit to the overwhelming force of France, and to accept the new constitution. Yet, even now, when peace seemed to have been restored, and the whole purpose of France attained, the tyranny and violence of the invaders exhausted the endurance of a spirited people. The magistrates of the Republic were expelled from office at the word of a French Commission; hostages were seized; at length an oath of allegiance to the new order was required as a condition for the evacuation of Switzerland by the French army. It was refused by the mountaineers of Unterwalden, and a handful of peasants met the French army at the village of Stanz, on the eastern shore of the Lake of Lucerne (Sept. 8). There for three days they fought with unyielding courage. Their resistance inflamed the French to a cruel vengeance: slaughtered families and burning villages renewed, in this so-called crusade of liberty, the savagery of ancient war."—C. A. Fyffe, *Hist. of Modern Europe, v.* 1, *ch.* 4.—"Geneva at the same time [1798] fell a prey to the ambition of the all-engrossing Republic. This celebrated city had long been an object of their desire; and the divisions by which it was now distracted afforded a favourable opportunity for accomplishing the object. The democratic party loudly demanded a union with that power, and a commission was appointed by the Senate to report upon the subject. Their report, however, was unfavourable; upon which General Gerard, who commanded a small corps in the neighbourhood, took possession of the town; and the Senate, with the bayonet at their throats, formally agreed to a union with the conquering Republic."—Sir A. Alison, *Hist. of Europe*, 1789–1815, *ch.* 25 (*v.* 6).

A. D. 1803-1848.—Napoleon's Act of Mediation.—Independence regained and Neutrality guaranteed by the Congress of Vienna.—Geneva, the Valais, and Neuchâtel.—The Federal Pact of 1815.—The Sonderbund and Civil War.—The Federal Constitution of 1848.—"Bonaparte summoned deputies of both parties to Paris, and after long consultation with them he gave to Switzerland, on the 2d February 1803, a new Constitution termed the Act of Mediation. Old names were restored, and in some cases what had been subject lands were incorporated in the League, which now consisted of 19 Cantons, each having a separate Constitution. The additional six were: St. Gallen, the Grisons, Aargau, Thurgau, Ticino, and Vaud. This was the fifth phase of the Confederation. A Diet was created, there being one deputy to each Canton, but still with limited powers, for he could only vote according to his instructions. The 19 deputies had, however, between them 25 votes, because every deputy who represented a Canton with more than 100,000 inhabitants possessed two votes, and there were six of these Cantons. The Diet met once a year in June, by turns at Zürich, Bern, Luzern, Freiburg, Solothurn, and Basel, the Cantons of which these were the capitals becoming successively directing Cantons. Three were Catholic and three Protestant. The head of the directing Canton for the time being was Landammann of Switzerland and President of the Diet. The Act of Mediation was not acceptable to all parties, and before Switzerland could become entirely independent there was to be one more foreign intervention. The fall of the Emperor Napoleon brought with it the destruction of his work in that country, the neutrality and independence of which were recognized by the Congress of Vienna [see Vienna: Congress of], though upon condition of the maintenance in the Confederation of the new Cantons; and in 1814 the Valais (a Republic allied to the Confederation from the Middle Ages till 1798), Neuchâtel (which, from being subject to the King of Prussia, had been bestowed by Napoleon upon Marshal Berthier), and Geneva (which had been annexed to France under the Directory in 1798, but was now independent and rendered more compact by the addition of some territory belonging to France and Savoy) were added to the existing Cantons. Finally, the perpetual neutrality of Switzerland and the inviolability of her territory were guaranteed by Austria, Great Britain, Portugal, Prussia, and Russia, in an Act signed at Paris on the 20th November 1815. Neuchâtel, however, only really gained its independence in 1857, when it ceased to be a Prussian Principality. The Confederation now consisted of 22 Cantons, and a Federal Pact, drawn up at Zürich by the Diet in 1815, and accepted by the Congress of Vienna, took the place of the Act of Mediation, and remained in force till 1848. It was in some respects a return to the state of things previous to the French Revolution, and restored to the Cantons a large portion of their former sovereignty. . . . Then came an epoch of agitation and discord. The Confederation suffered from a fundamental vice, i. e. the powerlessness of the central authority. The Cantons had become too independent, and gave to their deputies instructions differing widely from each other. The fall of the Bourbons in 1830 had its echo in Switzerland, the patricians of Bern and the aristocratic class in other Cantons lost the ascendency which they had grad-

ually recovered since the beginning of the century, and the power of the people was greatly increased. In several months 12 Cantons, among which were Luzern and Freiburg, modified their Constitutions in a democratic sense, some peaceably, others by revolution. . . . Between 1830 and 1847 there were in all 27 revisions of cantonal Constitutions. To political disputes religious troubles were added. In Aargau the Constitution of 1831, whereby the Grand Council was made to consist of 200 members, half being Protestants and half Catholics, was revised in 1840, and by the new Constitution the members were no longer to be chosen with any reference to creed, but upon the basis of wide popular representation, thus giving a numerical advantage to the Protestants. Discontent arose among the Catholics, and eventually some 2,000 peasants of that faith took up arms, but were beaten by Protestants of Aargau at Villmergen in January 1841, and the consequence was the suppression of the eight convents in that Canton, and the confiscation of their most valuable property. . . . A first result of the suppression of these convents was the fall of the Liberal government of Luzern, and the advent to power of the chiefs of the Ultramontane party in that Canton. Two years later the new government convoked delegates of the Catholic Cantons at Rothen, near Luzern, and there in secret conferences, and under the pretext that religion was in danger, the bases of a separate League or Sonderbund were laid, embracing the four Forest Cantons, Zug, and Freiburg. Subsequently the Valais joined the League, which was clearly a violation not only of the letter but also of the spirit of the Federal Pact. In 1844 the Grand Council of Luzern voted in favour of the Jesuits' appeal to be entrusted with the direction of superior public education, and this led to hostilities between the Liberal and Ultramontane parties. Bands of volunteers attacked Luzern and were defeated, the expulsion of the Jesuits became a burning question, and finally, when the ordinary Diet assembled at Bern in July 1847, the Sonderbund Cantons declared their intention of persevering in their separate alliance until the other Cantons had decreed the re-establishment of the Aargau convents, abandoned the question of the Jesuits, and renounced all modifications of the Pact. These conditions could evidently not be accepted. . . . On the 4th November 1847, after the deputies of the Sonderbund had left the Diet, this League was declared to be dissolved, and hostilities broke out between the two contending parties. A short and decisive campaign of 25 days ensued, Freiburg was taken by the Federal troops, under General Dufour, later Luzern opened its gates, the small Cantons and the Valais capitulated and the strife came to an end. . . . As soon as the Sonderbund was dissolved, it became necessary to proceed to the revision of the Federal Pact."—Sir F. O. Adams and C. D. Cunningham, *The Swiss Confederation, ch.* 1.

A. D. 1848-1890.—The existing Federal Constitution.—On the conclusion of the Sonderbund Secession and War, the task of drawing up a Constitution for the Confederacy was confided to a committee of fourteen members, and the work was finished on the 8th of April, 1848. "The project was submitted to the Cantons, and accepted at once by thirteen and a half; others joined during the summer, and the new Constitution was finally promulgated with the assent of all on the 12th September. Hence arose the seventh and last phase of the Confederation, by the adoption of a Federal Constitution for the whole of Switzerland, being the first which was entirely the work of Swiss, without any foreign influence, although its authors had studied that of the United States. . . . It was natural that, as in process of time commerce and industry were developed, and as the differences between the legislation of the various Cantons became more apparent, a revision of the first really Swiss Constitution should be found necessary. This was proposed both in 1871 and 1872, but the partisans of a further centralization, though successful in the Chambers, were defeated upon an appeal to the popular vote on the 12th May 1872, by a majority of between five and six thousand, and by thirteen Cantons to nine. The question was, however, by no means settled, and in 1874 a new project of revision, more acceptable to the partisans of cantonal independence, was adopted by the people, the numbers being 340,199, to 198,013. The Cantons were about two to one in favour of the revision, 14½ declaring for and 7½ against it. This Constitution bears date the 29th May 1874, and has since been added to and altered in certain particulars."—Sir F. O. Adams and C. D. Cunningham, *The Swiss Confederation, ch.* 1.—"Since 1848 . . . Switzerland has been a federal state, consisting of a central authority, the Bund, and 19 entire and 6 half states, the Cantons; to foreign powers she presents an united front, while her internal policy allows to each Canton a large amount of independence. . . . The basis of all legislative division is the Commune or 'Gemeinde,' corresponding in some slight degree to the English 'Parish.' The Commune in its legislative and administrative aspect or 'Einwohnergemeinde' is composed of all the inhabitants of a Commune. It is self-governing and has the control of the local police; it also administers all matters connected with pauperism, education, sanitary and funeral regulations, the fire brigade, the maintenance of public peace and trusteeships. . . . At the head of the Commune is the 'Gemeinderath,' or 'Communal Council,' whose members are elected from the inhabitants for a fixed period. It is presided over by an 'Ammann,' or 'Mayor,' or 'President.' . . . Above the Commune on the ascending scale comes the Canton. . . . Each of the 19 Cantons and 6 half Cantons is a sovereign state, whose privileges are nevertheless limited by the Federal Constitution, particularly as regards legal and military matters; the Constitution also defines the extent of each Canton, and no portion of a Canton is allowed to secede and join itself to another Canton. . . . Legislative power is in the hands of the 'Volk'; in the political sense of the word the 'Volk' consists of all the Swiss living in the Canton, who have passed their 20th year and are not under disability from

crime or bankruptcy. The voting on the part of the people deals mostly with alterations in the cantonal constitution, treaties, laws, decisions of the First Council involving expenditures of Frs. 100,000 and upward, and other decisions which the Council considers advisable to subject to the public vote, which also determines the adoption of propositions for the creation of new laws, or the alteration or abolition of old ones, when such a plebiscite is demanded by a petition signed by 5,000 voters. . . . The First Council (Grosse Rath) is the highest political and administrative power of the Canton. It corresponds to the 'Chamber' of other countries. Every 1,300 inhabitants of an electoral circuit send one member. . . . The Kleine Rath or special council (corresponding to the 'Ministerium' of other continental countries) is composed of three members and has three proxies. It is chosen by the First Council for a period of two years. It superintends all cantonal institutions and controls the various public boards. . . . The populations of the 22 sovereign Cantons constitute together the Swiss Confederation. . . . The highest power of the Bund is exercised by the 'Bundesversammlung,' or Parliament, which consists of two chambers, the 'Nationalrath,' and the 'Ständerath.' The Nationalrath corresponds to the English House of Commons, and the Ständerath partially to the House of Lords; the former represents the Swiss people, the latter the Cantons. The Nationalrath consists of 145 members. . . . Every Canton or half Canton must choose at least one member; and for the purpose of election Switzerland is divided into 49 electoral districts. The Nationalrath is triennial. . . . The Ständerath consists of 44 members, each Canton having two representatives and each half Canton one. . . . A bill is regarded as passed when it has an absolute majority in both chambers, but it does not come into force until either a plebiscite is not demanded for a space of three months, or, if it is demanded (for which the request of 30,000 voters is necessary) the result of the appeal to the people is in favor of the bill. This privilege of the people to control the decision of their representatives is called Das Referendum [see REFERENDUM]. . . . The highest administrative authority in Switzerland is the Bundesrath, composed of seven members, which [like the Bundesversammlung] . . . meets in Bern. Its members are chosen by the Bundesversammlung and the term of office is ten years. . . . The president of the Confederation (Bundespresident) is chosen by the Bundesversammlung from the members of the Bundesrath for one year. . . . The administration of justice, so far as it is exercised by the Bund, is entrusted to a Court, the Bundesgericht, consisting of nine members."—P. Hauri, *Sketch of the Const. of Switzerland (in Strickland's "The Engadine")*.

SYBARIS.—SYBARITES. — Sybaris and Kroton were two ancient Greek cities, founded by Achæan colonists, on the coast of the gulf of Tarentum, in southern Italy. "The town of Sybaris was planted between two rivers, the Sybaris and the Krathis (the name of the latter borrowed from a river of Achaia); the town of Kroton about twenty-five miles distant, on the river Æsarus. . . . The fatal contest between these two cities, which ended in the ruin of Sybaris, took place in 510 B. C., after the latter had subsisted in growing prosperity for 210 years. . . . We are told that the Sybarites, in that final contest, marched against Kroton with an army of 300,000 men. . . . The few statements which have reached us respecting them touch, unfortunately, upon little more than their luxury, fantastic self-indulgence and extravagant indolence, for which qualities they have become proverbial in modern times as well as in ancient. . Anecdotes illustrating these qualities were current, and served more than one purpose in antiquity."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 22.

SYBOTA, Naval Battle of.— Fought, B. C. 432, between the fleets of Corinth and Corcyra, in the quarrel which led up to the Peloponnesian War. The Athenians had ten ships present, as allies of the Corcyreans, intending only to watch affairs, but at the end they were drawn into the fight. The Corcyreans were beaten. — Thucydides, *History, bk.* 1, *sect.* 46.

SYCOPHANTS. — "Not until now [about B. C. 428, when the demagogue Cleon rose to power at Athens] did the activity of the Sycophants attain to its full height; a class of men arose who made a regular trade of collecting materials for indictments, and of bringing their fellow citizens before a legal tribunal. These denunciations were particularly directed against those who were distinguished by wealth, birth and services, and who therefore gave cause for suspicion; for the informers wished to prove themselves zealous friends of the people and active guardians of the constitution. . . . Intrigues and conspiracies were suspected in all quarters, and the popular orators persuaded the citizens to put no confidence in any magistrate, envoy or commission, but rather to settle everything in full assembly and themselves assume the entire executive. The Sycophants made their living out of this universal suspicion. . . . They threatened prosecutions in order thus to extort money from guilty and innocent alike; for even among those who felt free from guilt were many who shunned a political prosecution beyond all other things, having no confidence in a jury."—E. Curtius, *Hist. of Greece, bk.* 4, *ch.* 2 (*v.* 3).

SYLLABARIES.—"A good deal of the [Assyrian] literature was of a lexical and grammatical kind, and was intended to assist the Semitic student in interpreting the old Accadian texts. Lists of characters were drawn up with their pronunciation in Accadian and the translation into Assyrian of the words represented by them. Since the Accadian pronunciation of a character was frequently the phonetic value attached to it by the Assyrians, these syllabaries, as they have been termed—in consequence of the fact that the cuneiform characters denoted syllables and not letters—have been of the greatest possible assistance in the decipherment of the inscriptions."—A. SYNOD OF THE OAK, The. See ROME: A. D. 400-518.

SYRACUSE: B. C. 734.—The Founding of the city.—"Syracuse was founded the year after Naxos, by Corinthians, under a leader named Archias, a Heracleid, and probably of the ruling caste, who appears to have been compelled to quit his country to avoid the effects of the indignation which he had excited by a horrible outrage committed in a family of lower rank. . . . Syracuse became, in course of time, the parent of other Sicilian cities, among which Camarina was the most considerable. . . . Forty-five years after Syracuse, Gela was founded by a band collected from Crete and Rhodes, chiefly from Lindus, and about a century later (B. C. 582) sent forth settlers to the banks of the Acragas, where they built Agrigentum."—C. Thirlwall, *Hist. of Greece, ch.* 12.—The first settlement at Syracuse was on the islet of Ortygia. "Ortygia, two English miles in circumference, was separated from the main island only by a narrow channel, which was bridged over when the city was occupied and enlarged by Gelôn in the 72nd Olympiad, if not earlier. It formed only a small part, though the most secure and best-fortified part, of the vast space which the city afterwards occupied. But it sufficed alone for the inhabitants during a considerable time, and the present city in its modern decline has again reverted to the same modest limits. Moreover, Ortygia offered another advantage of not less value. It lay across the entrance of a spacious harbour, approached by a narrow mouth, and its fountain of Arethusa was memorable in antiquity both for the abundance and goodness of its water."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 22.

B. C. 480.—Defeat of the Carthaginians at Himera. See SICILY: B. C. 480.

B. C. 415-413.—Siege by the Athenians.—The Greek city of Syracuse, in Sicily, having been founded and built up by colonization from Corinth, naturally shared the deep hatred of Athens which was common among the Dorian Greeks, and which the Corinthians particularly found many reasons to cherish. The feeling at Athens was reciprocal, and, as the two cities grew supreme in their respective spheres and arrogant with the consciousness of superior power, mutual jealousies fed their passion of hostility, although nothing in their affairs, either politically or commercially, brought them really into conflict with one another. But Syracuse, enforcing her supremacy in Sicily, dealt roughly with the Ionian settlements there, and Athens was appealed to for aid. The first call upon her was made (B. C. 428) in the midst of the earlier period of the Peloponnesian War, and came from the people of Leontini, then engaged in a struggle with Syracuse, into which other Sicilian cities had been drawn. The Athenians were easily induced to respond to the call, and they sent a naval force which took part in the Leontine War, but without any marked success. The result was to produce among the Sicilians a common dread of Athenian interference, which led them to patch up a general peace. But fresh quarrels were not long in arising, in the course of which Leontini was entirely destroyed, and another Sicilian city, Egesta, which Athens had before received into her alliance, claimed help against Syracuse. This appeal reached the Athenians at a time (B. C. 416) when their populace was blindly following Alcibiades, whose ambition craved war, and who chafed under the restraints of the treaty of peace with Sparta which Nicias had brought about. They were carried by his influence into the undertaking of a great expedition of conquest, directed against the Sicilian capital—the most costly and formidable which any Greek state had ever fitted out. In the summer of B. C. 415 the whole force assembled at Corcyra and sailed across the Ionian sea to the Italian coast and thence to Sicily. It consisted of 134 triremes, with many merchant, ships and transports, bearing 5,100 hoplites, 480 bowmen and 700 Rhodian slingers. The commanders were Nicias, Lamachus and Alcibiades. On the arrival of the expedition in Sicily a disagreement among the generals made efficient action impossible and gave the Syracusans time to prepare a stubborn resistance. Meantime the enemies of Alcibiades

at Athens had brought about a decree for his arrest, on account of an alleged profanation of the sacred Eleusinian mysteries, and, fearing to face the accusation, he fled, taking refuge at Sparta, where he became the implacable enemy of his country. Three months passed before Nicias, who held the chief command, made any attempt against Syracuse. He then struck a single blow, which was successful, but which led to nothing; for the Athenian army was withdrawn immediately afterwards and put into winter quarters. In the following spring the regular operations of a siege and blockade were undertaken, at sea with the fleet and on land by a wall of circumvallation. The undertaking promised well at first and the Syracusans were profoundly discouraged. But Sparta, where Alcibiades worked passionately in their favor, sent them a general, Gylippus, who proved to be equal to an army, and promised reinforcements to follow. The more vigorous Athenian general, Lamachus, had been killed, and Nicias, with incredible apathy, suffered Gylippus to gather up a small army in the island and to enter Syracuse with it, in defiance of the Athenian blockade. From that day the situation was reversed. The besieged became the assailants and the besiegers defended themselves. Nicias sent to Athens for help and maintained his ground with difficulty through another long winter, until a second great fleet and army arrived, under the capable general Demosthenes, to reinforce him. But it was too late. Syracuse had received powerful aid, in ships and men, from Corinth, from Sparta and from other enemies of Athens, had built a navy and trained sailors of her own, and was full of confident courage. The Athenians were continually defeated, on land and sea, and hoped for nothing at last but to be able to retreat. Even the opportunity to do that was lost for them in the end by the weakness of Nicias, who delayed moving on account of an eclipse, until his fleet was destroyed in a final sea-fight and the island roads were blocked by an implacable enemy. The flight when it was undertaken proved a hopeless attempt, and there is nothing in history more tragical than the account of it which is given in the pages of Thucydides. On the sixth day of the struggling retreat the division under Demosthenes gave up and surrendered to the pursuers who swarmed around it. On the next day Nicias yielded with the rest, after a terrible massacre at the river Assinarus. Nicias and Demosthenes were put to the sword, although Gylippus interceded for them. Their followers were imprisoned in the Syracusan quarries. "There were great numbers of them and they were crowded in a deep and narrow place. At first the sun by day was still scorching and suffocating, for they had no roof over their heads, while the autumn nights were cold, and the extremes of temperature engendered violent disorders. Being cramped for room they had to do everything on the same spot. The corpses of those who died from their wounds, exposure to the weather, and the like, lay heaped one upon another. The smells were intolerable; and they were at the same time afflicted by hunger and thirst. During eight months they were allowed only about half a pint of water and a pint of food a day. Every kind of misery which could befall man in such a place befell them. This was the condition of all the captives for about ten weeks. At length the Syracusans sold them, with the exception of the Athenians and of any Sicilian or Italian Greeks who had sided with them in the war. The whole number of the public prisoners is not accurately known, but they were not less than 7,000. Of all the Hellenic actions which took place in this war, or indeed of all Hellenic actions which are on record, this was the greatest — the most glorious to the victors, the most ruinous to the vanquished; for they were utterly and at all points defeated, and their sufferings were prodigious. Fleet and army perished from the face of the earth; nothing was saved, and of the many who went forth few returned home. Thus ended the Sicilian expedition."— Thucydides, *History* (*tr. by Jowett*), *bk.* 6–7.

B. C. 397-396.—Dionysius and the Carthaginians.—Eighteen years after the tragic deliverance of Syracuse from the besieging host and fleet of the Athenians, the Sicilian capital experienced a second great peril and extraordinary escape of like kind. The democratic government of Syracuse had meantime fallen and a new tyrant had risen to power. Dionysius, who began life in a low station, made his way upward by ruthless energy and cunning, practising skilfully the arts of a demagogue until he had won the confidence of the people, and making himself their master in the end. When the sovereignty of Dionysius had acquired firmness and the fortifications and armament of his city had been powerfully increased, it suited his purposes to make war upon the Carthaginians, which he did, B. C. 397. He attacked Motye, which was the most important of their cities in Sicily, and took it after a siege of some months' duration, slaughtering and enslaving the wretched inhabitants. But his triumph in this exploit was brief. Imilkon, or Himilco, the Carthaginian commander, arrived in Sicily with a great fleet and army and recaptured Motye with ease. That done he made a rapid march to Messene, in the northeastern extremity of the island, and gained that city almost without a blow. The inhabitants escaped, for the most part, but the town is said to have been reduced to an utter heap of ruins — from which it was subsequently rebuilt. From Messene he advanced to Syracuse, Dionysius not daring to meet him in the field. The Syracusan fleet, encountering that of the Carthaginians, near Katana, was almost annihilated, and when the vast African armament, numbering more than seventeen hundred ships of every description, sailed into the Great Harbor of Syracuse, there was nothing to oppose it. The city was formidably invested, by land and sea, and its fate would have appeared to be sealed. But the gods interposed, as the ancients thought, and avenged themselves for insults which the Carthaginians had put upon them. Once more the fatal pestilence which had smitten the latter twice before in their Sicilian Wars appeared and their huge army was palsied by it. "Care and attendance upon the sick, or even interment of the dead, became impracticable; so that the whole camp presented a scene of deplorable agony, aggravated by the horrors and stench of

150,000 unburied bodies. The military strength of the Carthaginians was completely prostrated by such a visitation. Far from being able to make progress in the siege, they were not even able to defend themselves against moderate energy on the part of the Syracusans; who . . . were themselves untouched by the distemper." In this situation the Carthaginian commander basely deserted his army. Having secretly bribed Dionysius to permit the escape of himself and the small number of native Carthaginians in his force, he abandoned the remainder to their fate (B. C. 394). Dionysius took the Iberians into his service; but the Libyans and other mercenaries were either killed or enslaved. As for Imilkon, soon after his return to Carthage he shut himself in his house and died, refusing food. The blow to the prestige of Carthage was nearly fatal, producing a rebellion among her subjects which assumed a most formidable character; but it lacked capable command and was suppressed.—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 82.

B. C. 394-384.—Conquests and dominion of Dionysius.—"The successful result of Dionysios' first Punic War seems to have largely spread his fame in Old Greece," while it increased his prestige and power at home. But "he had many difficulties. He too, like the Carthaginians, had to deal with a revolt among his mercenaries, and he had to give up to them the town of Leontinoi. And the people of Naxos and Katanê, driven out by himself, and the people of Messana, driven out by Himilkôn, were wandering about, seeking for dwelling-places. He restored Messana, but he did not give it back to its old inhabitants. He peopled it with colonists from Italy and from Old Greece. . . . He also planted a body of settlers from the old Messenian land in Peloponnêsos," at Tyndaris. "Thus the north-eastern corner of Sicily was held by men who were really attached to Dionysios. And he went on further to extend his power along the north coast. . . . The Sikel towns were now fast taking to Greek ways, and we hear of commonwealths and tyrants among them, just as among the Greeks. Agyris, lord of Agyrium, was said to be the most powerful prince in Sicily after Dionysios himself. . . . With him Dionysios made a treaty, and also with other Sikel lords and cities." But he attacked the new Sikel town of Tauromenion, and was disastrously repulsed. "This discomfiture at Tauromenion checked the plans of Dionysios for a while. Several towns threw off his dominion. . . . And the Carthaginians also began to stir again. In B. C. 393 their general Magôn, seemingly without any fresh troops from Africa, set out from Western Sicily to attack Messana." But Dionysios defeated him, and the next year he made peace with the Carthaginians, as one of the consequences of which he captured Tauromenion in 391. "Dionysios was now at the height of his power in Sicily. . . . He commanded the whole east coast, and the greater part of the north and south coasts. . . . Dionysios and Carthage might be said to divide Sicily between them, and Dionysios had the larger share." Being at peace with the Carthaginians, he now turned his arms against the Greek cities in Southern Italy, and took Kaulônia, Hippônion, and Rhêgion (B. C. 387), making himself, "beyond all doubt, the chief power, not only in Sicily, but in Greek Italy also." Three years later (B. C. 384) Dionysios sent a splendid embassy to the Olympic festival in Greece. "Lysias called on the assembled Greeks to show their hatred of the tyrant, to hinder his envoys from sacrificing or his chariots from running. His chariots did run; but they were all defeated. Some of the multitude made an attack on the splendid tents of his envoys. He had also sent poems of his own to be recited; but the crowd would not hear them."—E. A. Freeman, *The Story of Sicily, ch.* 10.

B. C. 383.—War with Carthage. See Sicily: B. C. 383.

B. C. 344.—Fall of the Dionysian tyranny.—The elder Dionysius,—he who climbed by cunning demagoguery from an obscure beginning in life to the height of power in Syracuse, making himself the typical tyrant of antiquity,—died in 367 B. C. after a reign of thirty-eight years. He was succeeded by his son, Dionysius the younger, who inherited nothing in character from his father but his vices and his shameless meannesses. For a time the younger Dionysius was largely controlled by the admirable influence of Dion, brother-in-law and son-in-law of the elder tyrant (who had several wives and left several families). Dion had Plato for his teacher and friend, and strove with the help of the great Athenian—who visited Sicily thrice—to win the young tyrant to a life of virtue and to philosophical aims. The only result was to finally destroy the whole influence with which they began, and Dion, ere long, was driven from Syracuse, while Dionysius abandoned himself to debaucheries and cruelties. After a time Dion was persuaded to lead a small force from Athens to Syracuse and undertake the overthrow of Dionysius. The gates of Syracuse were joyfully opened to him and his friends, and they were speedily in possession of the whole city except the island-stronghold of Ortygia, which was the entrenchment of the Dionysian tyranny. Then ensued a protracted and desperate civil war in Syracuse, which half ruined the magnificent city. In the end Ortygia was surrendered, Dionysius having previously escaped with much treasure to his dependent city of Lokri, in southern Italy. Dion took up the reins of government, intending to make himself what modern times would call a constitutional monarch. He wished the people to have liberty, but such liberty as a philosopher would find best for them. He was distrusted,—misunderstood,—denounced by demagogues, and hated, at last, as bitterly as the tyrants who preceded him. His high-minded ambitions were all disappointed and his own character suffered from the disappointment. At the end of a year of sovereignty he was assassinated by one of his own Athenian intimates, Kallippus, who secured the goodwill of the army and made himself despot. The reign of Kallippus was maintained for something more than a year, and he was then driven out by Hipparinus, one of the sons of Dionysius the elder, and half-brother to the younger of that name. Hipparinus was presently murdered and another brother, Nysæus, took his place. Then Nysæus, in turn, was driven out by Dionysius, who returned from Lokri and re-established his power. The condition of Syracuse under the restored despotism of Dionysius was worse than it ever had been in the past, and the great city seemed likely to perish. At the last extremity of suffering, in

344 B. C., its people sent a despairing appeal to Corinth (the mother-city of Syracuse) for help. The Corinthians responded by despatching to Sicily a small fleet of ten triremes and a meagre army of 1,200 men, under Timoleon. It is the first appearance in history of a name which soon shone with immortality; for Timoleon proved himself to be one of the greatest and the noblest of Greeks. He found affairs in Sicily complicated by an invasion of Carthaginians, co-operating with one Hiketas, who had made himself despot of Leontini and who hoped to become master of Syracuse. By skilfully using the good fortune which the gods were believed to have lavished upon his enterprise, Timoleon, within a few months, had defeated Hiketas in the field; had accepted the surrender of Dionysius in Ortygia and sent the fallen tyrant to Corinth; had caused such discouragement to the Carthaginians that they withdrew fleet and army and sailed away to Africa. The whole city now fell quickly into his hands. His first act was to demolish the stronghold of tyranny in Ortygia and to erect courts of justice upon its site. A free constitution of government was then re-established, all exiled citizens recalled, a great immigration of Greek inhabitants invited, and the city revivified with new currents of life. The tyranny in other cities was overthrown and all Sicily regenerated. The Carthaginians returning were defeated with fearful losses in a great battle on the Krimesus, and a peace made with them which narrowed their dominion in Sicily to the region west of the Halykus. All these great achievements completed, Timoleon resigned his generalship, declined every office, and became a simple citizen of Syracuse, living only a few years, however, to enjoy the grateful love and respect of its people.—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 84–85.

Also in: Plutarch, *Timoleon.*

B. C. 317-289.—Under Agathokles.—A little more than twenty years after Timoleon expelled the brood of the tyrant Dionysius from Syracuse, and liberated Sicily, his work was entirely undone and a new and worse despot pushed himself into power. This was Agathokles, who rose, like his prototype, from a humble grade of life, acquired wealth by a lucky marriage, was trusted with the command of the Syracusan army — of mercenaries, chiefly — obtained a complete ascendancy over these soulless men, and then turned them loose upon the city, one morning at daybreak (B. C. 317), for a carnival of unrestrained riot and massacre. "They broke open the doors of the rich, or climbed over the roofs, massacred the proprietors within, and ravished the females. They chased the unsuspecting fugitives through the streets, not sparing even those who took refuge in the temples. . . . For two days Syracuse was thus a prey to the sanguinary, rapacious, and lustful impulses of the soldiery; 4,000 citizens had been already slain, and many more were seized as prisoners. The political purposes of Agathokles, as well as the passions of the soldiers, being then sated, he arrested the massacre. He concluded this bloody feat by killing such of his prisoners as were most obnoxious to him, and banishing the rest. The total number of expelled or fugitive Syracusans is stated at 6,000." In a city so purged and terrorized, Agathokles had no difficulty in getting himself proclaimed by acclamation sole ruler or autocrat, and he soon succeeded in extending his authority over a large part of Sicily. After some years he became involved in war with the Carthaginians, and suffered a disastrous defeat on the Himera (B. C. 310). Besieged in Syracuse, as a consequence, he resorted to bolder tactics than had been known before his time and "carried the war into Africa." His invasion of Carthage was the first that the Punic capital ever knew, and it created great alarm and confusion in the city. The Carthaginians were repeatedly beaten, Tunes, and other dependent towns, as well as Utica, were captured, the surrounding territory was ravaged, and Agathokles became master of the eastern coast. But all his successes gained him no permanent advantage, and, after four years of wonderful campaigning in Africa, he saw no escape from the difficulties of his situation except by basely stealing away from his army, leaving his two sons to be killed by the furious soldiers when they discovered his flight. Returning to Sicily, the wonderfully crafty and unscrupulous abilities which he possessed enabled him to regain his power and to commit outrage after outrage upon the people of Syracuse, Egesta, and other towns, until his death in 289 B. C.—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 97.

B. C. 212.—Siege by the Romans. See Punic Wars: The Second.

A. D. 279.—Sacked by Franks.—The Emperor Probus, who expelled from Gaul, A. D. 277, the invaders then beginning to swarm upon the hapless province, removed a large body of captive Franks to the coast of Pontus, on the Euxine, and settled them there. The restive barbarians soon afterwards succeeded (A. D. 279) in capturing a fleet of vessels, in which they made their way to the Mediterranean, plundering the shores and islands as they passed towards the west. "The opulent city of Syracuse, in whose port the navies of Athens and Carthage had formerly been sunk, was sacked by a handful of barbarians, who massacred the greatest part of the trembling inhabitants." This was the crowning exploit of the escaping Franks, after which they continued their voyage and reached in due time their own shores, among the islands of the delta of the Rhine.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 12.

A. D. 878.—Siege and capture by the Saracens. See Sicily: A. D. 827–878.

SYRIA.—"Between the Arabian Desert and the eastern coast of the Levant there stretches — along almost the full extent of the latter, or for nearly 400 miles — a tract of fertile land varying from 70 to 100 miles in breadth. This is so broken up by mountain range and valley, that it has never all been brought under one native government; yet its well-defined boundaries — the sea on the west, Mount Taurus on the north, and the desert to east and south — give it a certain unity, and separate it from the rest of the world. It has rightly, therefore, been covered by one name, Syria. Like that of Palestine, the name is due to the Greeks, but by a reverse process. As 'Palestina,' which is really Philistina, was first the name of only a part of the coast, and thence spread inland to the desert, so Syria, which is a shorter form of Assyria, was originally applied by the Greeks to the whole of the Assyrian Empire from the Caucasus to the

Levant, then shrank to this side of the Euphrates, and finally within the limits drawn above. . . . Syria is the north end of the Arabian world. . . . The population of Syria has always been essentially Semitic [see SEMITES]. . . . Syria's position between two of the oldest homes of the human race made her the passage for the earliest intercourse and exchanges of civilisation. It is doubtful whether history has to record any great campaigns . . . earlier than those which Egypt and Assyria waged against each other across the whole extent of Syria [see EGYPT: ABOUT B. C. 1700–1400, to B. C. 670–525]. . . . The Hittites came south from Asia Minor over Mount Taurus, and the Ethiopians came north from their conquest of the Nile. Towards the end of the great duel between Assyria and Egypt, the Scythians from north of the Caucasus devastated Syria. When the Babylonian Empire fell, the Persians made her a province of their empire, and marched across her to Egypt [see EGYPT: B. C. 525–332]. At the beginning of our era, she was overrun by the Parthians. The Persians invaded her a second time, just before the Moslem invasion of the seventh century [see MAHOMETAN CONQUEST: A. D. 632–639]; she fell, of course, under the Seljuk Turks in the eleventh [see TURKS: A. D. 1063–1073, and after]; and in the thirteenth and fourteenth the Mongols thrice swept through her. Into this almost constant stream of empires and races, which swept through Syria from the earliest ages, Europe was drawn under Alexander the Great [see MACEDONIA: B. C. 334–330, and after]. . . . She was scoured during the following centuries by the wars of the Seleucids and Ptolemies, and her plains were planted all over by their essentially Greek civilisation [see SELEUCIDÆ; and JEWS: B. C. 332–167]. Pompey brought her under the Roman Empire, B. C. 65 [see ROME: B. C. 69–63; and JEWS: B. C. 166–40], and in this she remained till the Arabs took her, 634 A. D. [see MAHOMETAN CONQUEST: A. D. 632–639]. The Crusaders held her for a century, 1098–1187, and parts of her for a century more [see CRUSADES: A. D. 1096–1099]. . . . Napoleon the Great made her the pathway of his ambition towards that empire on the Euphrates and Indus whose fate was decided on her plains, 1799 [see FRANCE: A. D. 1798–1799 (AUGUST—AUGUST)]. Since then, Syria's history has mainly consisted in a number of sporadic attempts on the part of the Western world to plant upon her both their civilisation and her former religion."—George Adam Smith, *Historical Geography of the Holy Land, bk.* 1, *ch.* 1.

SYRTIS MAJOR AND SYRTIS MINOR.—These were the names given by the Greeks to the two gulfs (or rather the two corners of the one great gulf) which deeply indent the coast of North Africa. Syrtis Major, or the Greater Syrtis, is now known as the Gulf of Sidra; Syrtis Minor as the Gulf of Khabs, or Cabes.

SYSSITIA, The.—"The most important feature in the Cretan mode of life is the usage of the Syssitia, or public meals, of which all the citizens partook, without distinction of rank or age. The origin of this institution cannot be traced: we learn however from Aristotle that it was not peculiar to the Greeks, but existed still earlier in the south of Italy among the Œnotrians. . . . At Sparta [which retained this institution, in common with Crete, to the latest times], the entertainment was provided at the expense, not of the state, but of those who shared it. The head of each family, as far as his means reached, contributed for all its members; but the citizen who was reduced to indigence lost his place at the public board. The guests were divided into companies, generally of fifteen persons, who filled up vacancies by ballot, in which unanimous consent was required for every election. No member, not even the king, was permitted to stay away, except on some extraordinary occasion, as of a sacrifice, or a lengthened chase, when he was expected to send a present to the table: such contributions frequently varied the frugal repast."—C. Thirlwall, *History of Greece, ch.* 7–8.

TAIFALÆ, The.—In the fourth century, "the Taifalæ inhabited that part of the province of Dacia which is now called Wallachia. They are first mentioned as allies of the Thervingi in A. D. 291 (Mamertin, Panegyr. ii. c. 17). Their ethnological relations are uncertain. Zosimus vaguely calls them Scythians (ii. c. 31); St. Martin conjectures that they were the last remains of the great and powerful nation of the Dacians, and Latham that they were Slavonians. But we only know for certain that they were constantly allies of the Visigoths, and that Farnobius, one of their chiefs, is expressly called a Goth by Ammianus (xxxi. c. 9). They subsequently accompanied the Visigoths in their migrations westward, and settled on the south side of the Liger, in the country of the Pictavi, where they were in the time of Gregory of Tours, who calls them Theiphali, and their district Theiphalia."— W. Smith, *Note to Gibbon's Decline and Fall of the Roman Empire, ch.* 26.

TAILLE AND GABELLE, The.—Under the old régime, before the Revolution, "the chief item in the French budget was the taille [analagous to the English word 'tally']. This was a direct tax imposed upon the property of those assessed, and in theory it was in proportion to the amount they possessed. But in the most of France it fell chiefly upon personal property. It was impossible that with the most exact and honest system it should be accurately apportioned, and the system that was in force was both loose and dishonest. The local assessors exempted some and overtaxed others; they released their friends or their villages, and imposed an increased burden upon others, and, to a very large extent, exemptions or reductions were obtained by those who had money with which to bribe or to litigate. The bulk of this tax fell upon the peasants. From it, indeed, a large part of the population, and the part possessing the most of the wealth of the country, was entirely exempt. The nobility were free from any personal tax, and under this head were probably included 400,000 people. The clergy were free, almost all of the officials of every kind, and the members of many professions and trades. Many of the cities had obtained exemption from the taille by the payment of a sum of money, which was either nominal or very moderate. Only laborers and peasants, it was said, still remained subject to it. Out of 11,000,000 people [in the 17th century] in those portions of France where the taille was a personal tax, probably 2,500,000 were exempt. . . . Next to the taille, the most important tax was the gabelle, and, though less onerous, it also produced a vast amount of misery. The gabelle was a duty on salt, and it was farmed by the government. The burden of an excessive tax was increased by the cupidity of those who bought the right to collect its proceeds. The French government retained a monopoly of salt, much like that which it now possesses of tobacco, but the price which it charged for this article of necessity was such, that the States of Normandy declared that salt cost the people more than all the rest of their food. In some provinces the price fixed imposed a duty of about 3,000 per cent., and salt sold for nearly ten sous a pound, thirty times its present price in France, though it is still subject to a considerable duty. From this tax there were no personal exemptions, but large portions of the country were not subject to the gabelle. Brittany was free, Guienne, Poitou, and several other provinces were wholly exempt or paid a trifling subsidy. About one third of the population were free from this duty, and the exemption was so valued that a rumor that the gabelle was to be imposed was sufficient to excite a local insurrection. Such a duty, on an article like salt, was also necessarily much more oppressive for the poor than the rich. As the exorbitant price would compel many to go without the commodity, the tax was often rendered a direct one. The amount of salt was fixed which a family should consume, and this they were forced to take at the price established by the government. . . . The gabelle was farmed for about 20,000,000 livres, and to cover the expenses and profits of the farmers probably 27,000,000 in all was collected from the people. A family of six would, on an average, pay the equivalent of ninety francs, or about eighteen dollars a year, for this duty."—J. B. Perkins, *France under Mazarin, ch.* 18 (*v.* 2).—"Not only was the price of salt rendered exorbitant by the tax, but its consumption at this exorbitant price was compulsory. Every human being above seven years of age was bound to consume seven pounds of salt per annum, which salt, moreover, was to be exclusively used with food or in cooking. To use it for salting meat, butter, cheese, &c., was prohibited under severe penalties. The average price of salt [in the reign of Louis XIV.] over two-thirds of the country, was a shilling a pound. To buy salt of any one but the authorised agents of the Government was punished by fines of 200, 300, and 500 livres (about £80 of our money), and smugglers were punished by imprisonment, the galleys, and death. . . . The use of salt in agriculture was rendered impossible, and it was forbidden, under a penalty of 300 livres (about £50), to take a beast to a salt-marsh, and allow it to drink sea-water. Salted hams and bacon were not allowed to enter the country. The salt used in the fisheries was supervised and guarded by such a number of vexatious regulations that one might suppose the object of the Government was to render that branch of commerce impossible. . . . But even the Gabelle was less onerous than the Taille. The amount of the Taille was fixed in the secret councils of the Government, according to the exigencies of the financial situation every year. The thirty-two Intendants of the provinces were informed of the amount which their districts were expected to forward to the Treasury. Each Intendant then made known to the Elections (sub-districts) of his Généralité the sum which they had to find, and the officers called Elus apportioned to each parish its quota of contribution. Then, in the parishes, was set in motion a system of blind, stupid, and

remorseless extortion, of which one cannot read even now without a flash of indignation. First of all, the most flagitious partiality and injustice presided over the distribution of the tax. Parishes which had a friend at Court or in authority got exempt, and with them the tax was a mere form. But these exemptions caused it to fall with more crushing weight on their less fortunate neighbours, as the appointed sum must be made up, whoever paid it. The inequalities of taxation almost surpass belief. . . . But this was far from being the worst feature. The chief inhabitants of the country villages were compelled to fill, in rotation, the odious office of collectors. They were responsible for the gross amount to be levied, which they might get as they could out of their parishioners. . . . Friends, or persons who had powerful patrons, were exempted; while enemies, or the unprotected, were drained of their last farthing. . . . The collectors went about, we are told, always keeping well together for fear of violence, making their visits and perquisitions, and met everywhere with a chorus of imprecations. As the Taille was always in arrear, on one side of the street might be seen the collectors of the current year pursuing their exactions, while on the other side were those of the year previous engaged on the same business, and further on were the agents of the Gabelle and other taxes employed in a similar manner. From morning to evening, from year's beginning to year's ending, they tramped, escorted by volleys of oaths and curses, getting a penny here and a penny there; for prompt payment under this marvellous system was not to be thought of."—J. C. Morison, *The Reign of Louis XIV.* (*Fortnightly Rev., April*, 1874, *v.* 21). —Under Colbert (1661–1683), in the reign of Louis XIV., both the taille (or villein tax, as it was often called) and the gabelle were greatly reduced, and the iniquities of their distribution and collection were much lessened.—H. Martin, *Hist. of France: Age of Louis XIV.*, *v.* 1, *ch.* 1. —For an intimation of the origin of the taille, see FRANCE: A. D. 1453–1461.

TALENT, Attic, Babylonian, &c. —"Not only in Attica, but in almost all the Hellenic States, even in those which were not in Greece but were of Hellenic origin, money was reckoned by talents of sixty minas, the mina at a hundred drachmas, the drachma at six oboli. At Athens the obolus was divided into eight chalci . . . the chalcûs into seven lepta. Down to the half obolus, the Athenian money was, in general, coined only in silver; the dichalchon, or quarter obolus, in silver or copper; the chalcûs and the smaller pieces only in copper. . . . The value of the more ancient Attic silver talent, silver value reckoned for silver value, will be 1,500 thlr. Prussian currency; of the mina, 25 thaler; of the drachma, 6 gute groschen; of the obolus 1 g. gr., —equivalent to $1.026, $17.10, 71.1 cts., 2.85 cts. respectively. . . . Before the time of Solon, the Attic money was heavier; also the commercial weight was heavier than that by which money was weighed. One hundred new drachmas were equivalent to 72–73 ancient drachmas; but the ancient weight remained with very little alteration as commercial weight, to which, in later times, an increase was also added. Through the alterations of Solon, the Attic money, which before stood to the Æginetan in the relation of 5:6, had to the same the relation of 3:5. The new was related to the ancient Attic money as 18:25. Compared with the heavy Æginetan drachma . . . , the Attic was called the light drachma. . . . The former was equivalent to ten Attic oboli; so that the Æginetan talent weighed more than 10,000 Attic drachmas. It was equal to the Babylonian talent. Nevertheless the Æginetan money was soon coined so light that it was related to the Attic nearly as 3:2. . . . The Corinthian talent is to be estimated as originally equivalent to the Æginetan, but it was also in later times diminished. . . . The Egyptian talent . . . contained, according to Varro in Pliny, eighty Roman pounds, and cannot, therefore, have been essentially different from the Attic talent, since the Attic mina is related to the Roman pound as 4:3. . . . The Euboic talent is related . . . to the Æginetan as five to six, and is no other than the money-talent of the Athenians in use before the time of Solon, and which continued in use as commercial weight. According to the most accurate valuation, therefore, one hundred Euboic drachmas are equivalent to 138⅔ drachmas of Solon. . . . Appian has given the relation of the Alexandrian to the Euboic talent in round numbers as 6 to 7 = 120 to 140; but it was rather more accurately as 120 to 138⅔. . . . So much gold . . . as was estimated to be equivalent to a talent of silver, was undoubtedly also called a talent of gold. And, finally, a weight of gold of 6,000 drachmas, the value of which, compared with silver, always depended upon the existing relation between them, was sometimes thus called."—A. Boeckh, *Public Economy of Athens* (*tr. by Lamb*), *bk.* 1, *ch.* 4–5.—See, also, SHEKEL.

TALLAGE, The.—"Under the general head of donum, auxilium, and the like, came a long series of imposts [in the period of the Norman kings], which were theoretically gifts of the nation to the king, and the amount of which was determined by the itinerant justices after separate negotiation with the payers. The most important of these, that which fell upon the towns and demesne lands of the Crown, is known as the tallage. This must have affected other property besides land, but the particular method in which it was to be collected was determined by the community on which it fell, or by special arrangement with the justices."—W. Stubbs, *Const. Hist. of Eng.*, *ch.* 13, *sect.* 161 (*v.* 1).

TALLIGEWI, The. See AMERICAN ABORIGINES: ALLEGHANS.

TALMUD, The.—"The Talmud [from a Hebrew verb signifying 'to learn'] is a vast irregular repertory of Rabbinical reflections, discussions, and animadversions on a myriad of

topics treated of or touched on in Holy Writ; a treasury, in chaotic arrangement, of Jewish lore, scientific, legal, and legendary; a great storehouse of extra-biblical, yet biblically referable, Jewish speculation, fancy, and faith. . . . The Talmud proper is throughout of a twofold character, and consists of two divisions, severally called the Mishna and the Gemara. . . . The Mishna, in this connection, may be regarded as the text of the Talmud itself, and the Gemara as a sort of commentary. . . . The Gemara regularly follows the Mishna, and annotates upon it sentence by sentence. . . . There are two Talmuds, the Yerushalmi [Jerusalem], or, more correctly, the Palestinian, and the Babli, that is, the Babylonian. The Mishna is pretty nearly the same in both these, but the Gemaras are different. The Talmud Yerushalmi gives the traditional sayings of the Palestinian Rabbis, . . . the 'Gemara of the Children of the West,' as it is styled; whereas the Talmud Babli gives the traditional sayings of the Rabbis of Babylon. This Talmud is about four times the size of the Jerusalem one; it is by far the more popular, and to it almost exclusively our remarks relate." —P. I. Hershon, *Talmudic Miscellany, introd.*— The date of the compilation of the Babylonian Talmud is fixed at about A. D. 500; that of Jerusalem was a century or more earlier. See, also, MISCHNA.

TALUKDARS.—"A Taluka [in India] is a large estate, consisting of many villages, or, as they would be called in English, parishes. These villages had originally separate proprietors, who paid their revenue direct to the Government treasury. The Native Government in former times made over by patent, to a person called Talukdar, its right over these villages, holding him responsible for the whole revenue. . . . The wealth and influence thus acquired by the Talukdar often made him, in fact, independent. . . . When the country came under British rule, engagements for payment of the Government Revenue were taken from these Talukdars, and they were called Zamindars."—Sir R. Temple, *James Thomason, p.* 158.—See INDIA: A. D. 1785–1793.

TAMMANY RING, The. See NEW YORK: A. D. 1863–1871.

TAMMANY SOCIETY.—TAMMANY HALL.—"Shortly after the peace of 1783, a society was formed in the city of New York, known by the name of the Tammany Society. It was probably originally instituted with a view of organizing an association antagonist to the Cincinnati Society. That society was said to be monarchical or rather aristocratical in its tendency, and, when first formed, and before its constitution was amended, on the suggestion of General Washington and other original members, it certainly did tend to the establishment of an hereditary order, something like an order of nobility. The Tammany Society originally seems to have had in view the preservation of our democratic institutions. . . . 'Tammany Society, or Columbian Order, was founded by William Mooney, an upholsterer residing in the city of New York, some time in the administration of President Washington. . . . William Mooney was one of those who, at that early day, regarded the powers of the general government as dangerous to the independence of the state governments, and to the common liberties of the people. His object was to fill the country with institutions designed, and men determined, to preserve the just balance of power. His purpose was patriotic and purely republican. . . . Tammany was, at first, so popular, that most persons of merit became members; and so numerous were they that its anniversary [May 12] was regarded as a holiday. At that time there was no party politics mixed up in its proceedings. But when President Washington, in the latter part of his administration, rebuked "self created societies," from an apprehension that their ultimate tendency would be hostile to the public tranquility, the members of Tammany supposed their institution to be included in the reproof; and they almost forsook it. The founder, William Mooney, and a few others, continued steadfast. At one anniversary they were reduced so low that but three persons attended its festival. From this time it became a political institution, and took ground with Thomas Jefferson.'"—J. D. Hammond, *History of Political Parties in the State of New York, v.* 1, *ch.* 18.—"The ideal patrons of the society were Columbus and Tammany, the last a legendary Indian chief, once lord, it was said, of the island of Manhattan, and now adopted as the patron saint of America. The association was divided into thirteen tribes, each tribe typifying a state, presided over by a sachem. There were also the honorary posts of warrior and hunter, and the council of sachems had at their head a grand sachem, a type evidently of the President of the United States."—R. Hildreth, *Hist. of the U. S., v.* 4, *ch.* 3.—"Shortly after Washington's inauguration, May 12, 1789, the 'Tammany Society or Columbian Order' was founded. It was composed at first of the moderate men of both political parties, and seems not to have been recognized as a party institution until the time of Jefferson as President. William Mooney was the first Grand Sachem; his successor in 1790 was William Pitt Smith, and in 1791 Josiah Ogden Hoffman received the honor. John Pintard was the first Sagamore. De Witt Clinton was scribe of the council in 1791. It was strictly a national society, based on the principles of patriotism, and had for its object the perpetuation of a true love for our own country. Aboriginal forms and ceremonies were adopted in its incorporation."—Mrs. M. J. Lamb, *Hist. of the City of N. Y., v.* 2, *p.* 362, *foot-note.*—"One must distinguish between the 'Tammany Society or Columbian Order' and the political organization called for shortness 'Tammany Hall.'. . . The Tammany Society owns a large building on Fourteenth Street, near Third Avenue, and it leases rooms in this building to the 'Democratic Republican General Committee of the City of New York,' otherwise and more commonly known as 'Tammany Hall' or 'Tammany.' Tammany Hall means, therefore, first, the building on Fourteenth Street where the 'Democracy' have their headquarters; and secondly, the political body officially known as the Democratic Republican General Committee of the City of New York.

. . . The city of New York is divided by law into thirty 'assembly districts;' that is, thirty districts, each of which elects an assemblyman to the state legislature. In each of these assembly districts there is held annually an election of members of the aforesaid Democratic Republican General Committee. This committee is a very large one, consisting of no less than five thousand men; and each assembly district is allotted a certain number of members, based on the number of Democratic votes which it cast in the last preceding presidential election. Thus the number of the General Committeemen elected in each assembly district varies from sixty to two hundred and seventy. There is intended to be one General Committeeman for every fifty Democratic electors in the district. In each assembly district there is also elected a district leader, the head of Tammany Hall for that district. He is always a member of the General Committee, and these thirty men, one leader from each assembly district, form the executive committee of Tammany Hall. 'By this committee,' says a Tammany official, 'all the internal affairs of the organization are directed, its candidates for offices are selected, and the plans for every campaign are matured.' The General Committee meets every month, five hundred members constituting a quorum; and in October of each year it sits as a county convention, to nominate candidates for the ensuing election. There is also a sub-committee on organization, containing one thousand members, which meets once a month. This committee takes charge of the conduct of elections. There is, besides, a finance committee, appointed by the chairman of the General Committee, and there are several minor committees, unnecessary to mention. The chairman of the finance committee is at present Mr. Richard Croker. Such are the general committees of Tammany Hall. . . . Each assembly district is divided by law into numerous election districts, or, as they are called in some cities, voting precincts,— each election district containing about four hundred voters. The election districts are looked after as follows: Every assembly district has a district committee, composed of the members of the General Committee elected from that district, and of certain additional members chosen for the purpose. The district committee appoints in each of the election districts included in that particular assembly district a captain. This man is the local boss. He has from ten to twenty-five aids, and he is responsible for the vote of his election district. There are about eleven hundred election districts in New York, and consequently there are about eleven hundred captains, or local bosses, each one being responsible to the (assembly) district committee by which he was appointed. Every captain is held to a strict account. If the Tammany vote in his election district falls off without due cause, he is forthwith removed, and another appointed in his place. Usually, the captain is an actual resident in his district; but occasionally, being selected from a distant part of the city, he acquires a fictitious residence in the district. Very frequently the captain is a liquor dealer, who has a clientele of customers, dependents, and hangers-on, whom he 'swings,' or controls. He is paid, of course, for his services; he has some money to distribute, and a little patronage, such as places in the street-cleaning department, or perhaps a minor clerkship. The captain of a district has a personal acquaintance with all its voters; and on the eve of an election he is able to tell how every man in his district is going to vote. He makes his report; and from the eleven hundred reports of the election district captains the Tammany leaders can predict with accuracy what will be the vote of the city."—H. C. Merwin, *Tammany Hall* (*Atlantic, Feb.*, 1894).

TANISTRY, Law of.—"These chieftainships [in ancient Ireland], and perhaps even the kingdoms themselves, though not partible, followed a very different rule of succession than that of primogeniture. They were subject to the law of tanistry, of which the principle is defined to be that the demesne lands and dignity of chieftainship, descended to the eldest and most worthy of the same blood; these epithets not being used, we may suppose, synonymously, but in order to indicate that the preference given to seniority was to be controlled by a due regard to desert. No better mode, it is evident, of providing for a perpetual supply of those civil quarrels, in which the Irish are supposed to place so much of their enjoyment, could have been devised."—H. TAPROBANE.— The name by which the island of Ceylon was known to the ancients. Hipparchus advanced the opinion that it was not merely a large island, but the beginning of another world.—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 23, *sect.* 2 (*v.* 2).

TAPURIANS, The.—"To the west of the Hyrcanians, between Elburz and the Caspian, lay the Tapurians, whose name has survived in the modern Taberistan, and further yet, on the sea-coast, and at the mouth of the Mardus (now Safidrud), were the Mardians."—M. Duncker, *Hist. of Antiquity, bk.* 8, *ch.* 1 (*v.* 5).

TARA, The Hill, the Feis, and the Psalter of.—The Feis Teavrach, or Feis of Tara, in Irish history, was a triennial assembly on the royal hill of Tara, in Meath, which is claimed to have been instituted by a certain King Ollamh Fodhla, at so remote a period as 1,300 years before Christ. "All the chieftains or heads of septs, bards, historians, and military leaders throughout the country were regularly summoned, and were required to attend under the penalty of being treated as the king's enemies. The meeting was held in a large oblong hall, and the first three days were spent in enjoying the hospitality of the king, who entertained the entire assembly during its sittings. The bards give long and glowing accounts of the magnificence displayed on these occasions, of the formalities employed, and of the business transacted. Tables were arranged along the centre of the hall, and on the walls at either side were suspended the banners or arms of the chiefs, so that each chief on entering might take his seat under his own escutcheon. Orders were issued by sound of trumpet, and all the forms were characterized by great solemnity. What may have been the authority of this assembly, or whether it had any power to enact laws, is not clear; but it would appear that one of its principal functions was the inspection of the national records, the writers of which were obliged to the strictest accuracy under the weightiest penalties."—M. Haverty, *Hist. of Ireland, p.* 24.—The result of the examination and correction of the historical records of the kingdom were "entered in the great national register called the Psalter of Tara, which is supposed to have been destroyed at the period of the Norman invasion. . . . It is supposed that part of the contents of the Psalter of Cashel, which contains much of the fabulous history of the Irish, was copied from it."—T. Wright, *Hist. of Ireland, bk.* 1, *ch.* 2 (*v.* 1).

TARENTUM.—Tarentum (or Taras), the most important of the ancient Greek cities in Italy, "lay at the northern corner of the great gulf which still bears its name. It had an excellent harbour, almost land-locked. On its eastern horn stood the city. Its form was triangular; one side being washed by the open sea, the other by the waters of the harbour, while the base or land side was protected by a line of strong fortifications. Thus advantageously posted for commerce the city grew apace. She possessed an opulent middle class; and the poorer citizens found an easy subsistence in the abundant supply of fish which the gulf afforded. These native fishermen were always ready to man the navy of the state. But they made indifferent soldiers. Therefore when any peril of war threatened the state, it was the practice of the government to hire foreign captains, soldiers of fortune, who were often kings or princes, to bring an army for their defence. . . . The origin of Lacedæmonian Tarentum is veiled in fable. The warriors of Sparta (so runs the well-known legend) went forth to the second Messenian war under a vow not to see their homes till they had conquered the enemy. They were long absent, and their wives sought paramours among the slaves and others who had not gone out to war. When the warriors returned, they found a large body of youth grown up from this adulterous intercourse. These youths (the Parthenii as they were called), disdaining subjection, quitted their native land under the command of Phalantus, one of their own body, and founded the colony of Tarentum."—H. G. Liddell, *Hist. of Rome, bk.* 3, *ch.* 25 (*v.* 1).—See, also, Siris.

TARIFF LEGISLATION AND CONVENTIONS.

(The Netherlands): 15th Century.—Early Free Trade and Reciprocity.—In the Netherlands, at the close of a short war with the English, in 1437, "the import of raw wool was entirely relieved from the payment of even the ordinary customs. . . . And this was then their notion of protection,—to be allowed to buy what they liked where they liked, to live at peace with their neighbours, and to be let alone. Four hundred years have passed and gone since the Netherlands persuaded their rulers to take off all duty on raw wool, and to permit half-finished clothes to be brought into their country in order that they might be dyed and taken out again duty free; yet we live in the midst of tariffs whose aim it is to hinder the importation of the raw material by prohibitory duties and to prevent competition in every kind of fabric by so-called protecting ones! And in England, also, at the period in question, the suicidal spirit of commercial envy had seized hold of the government, and in every parliament some fresh evidence was afforded of the jealousy with which foreign skill and competition were viewed. But the Dutch held on

the tenour of their discerning and sagacious way without waiting for reciprocity or resenting its reverse. If the English would not admit their cloths, that was no reason why they should cheat themselves of the advantage of English and Irish wool. If not cloths, there was doubtless something else that they would buy from them. Among other articles, there was salt, which they had acquired a peculiar skill in refining; and there was an extensive carrying trade in the produce of the Northern countries, and in various costly luxuries, which the English obtained from remoter regions generally through them. In 1496, when Philip (father of the Emperor Charles V.) assumed the government of the Netherlands, as Duke of Brabant, he "presented to the senates of the leading cities the draught of a commercial treaty with England, conceived in a wise and liberal spirit, and eminently fitted to advance the real welfare of both countries. Their assent was gladly given. . . . Nor did they over-estimate the value of the new compact, which long went by the name of 'The Grand Treaty of Commerce.' Its provisions were, in all respects, reciprocal, and enabled every kind of merchandise to be freely imported from either country by the citizens of the other. The entire liberty of fishing on each other's coast was confirmed; measures were prescribed for the suppression of piracy; and property saved from wrecks, when none of the crew survived, was vested in the local authorities in trust for the proper owners, should they appear to claim it within a year and a day. . . . The industrial policy of the Dutch was founded on ideas wholly and essentially different from that of the kingdoms around them. 'The freedom of traffic had ever been greater with them than amongst any of their neighbours;' and its different results began to appear. Not only were strangers of every race and creed sure of an asylum in Holland, but of a welcome; and singular pains were taken to induce those whose skill enabled them to contribute to the wealth of the state to settle permanently in the great towns."—W. T. McCullagh, *Industrial History of Free Nations, v.* 2, *pp.* 110–111, 150–151, 266–267.

(France): A. D. 1664-1667.—The System of Colbert.—Colbert, the great minister of Louis XIV., was the first among statesmen who had an economic system, "settled, complete and consistent in all its parts; and it is to the eternal honor of his name that he made it triumph in spite of obstacles of every kind. Although this system was far from being irreproachable in all its parts, it was an immense progress at the time of its appearance; and we have had nothing since then which can be compared with it, for breadth and penetration. . . . It was . . . the need of restoring order in the finances which gave rise to the attempts at amelioration made by Colbert. This illustrious minister soon comprehended that the surest way to increase public fortune was to favor private fortune, and to open to production the broadest and freest ways. . . . One of the first acts of his ministry, the reëstablishment of the taxes on a uniform basis, is an homage rendered to true principles; and one cannot doubt that all the others would have been in conformity with this glorious precedent, if the science of wealth had been, at that time, as advanced as it is to-day. Colbert would certainly have carried out in France what Mr. Huskisson had begun in England at the time of his sudden death. . . . The edict of September, 1664, reduced the import and export duties on merchandise to suitable limits, and suppressed the most onerous. 'It is our intention,' said the king, 'to make known to all our governors and intendants in what consideration we hold at present everything that may concern commerce. . . . As the most solid and most essential means for the reëstablishment of commerce are the diminution and the regulation of the duties which are levied on all commodities, we have arranged to reduce all these duties to one single import and one export duty, and also to diminish these considerably, in order to encourage navigation, reëstablish the ancient manufactures, banish idleness.'. . . At the same time Colbert prohibited the seizure for the tailles (villein-tax) [see TAILLE AND GABELLE] of beds, clothes, bread, horses and cattle serving for labor; or the tools by which artisans and manual laborers gained their livelihood. The register of the survey of lands was revised, so that property should be taxed only in proportion to its value and the actual extent of the land. The great highways of the kingdom and all the rivers were then guarded by armies of receivers of tolls, who stopped merchandise on its passage and burdened its transportation with a multitude of abusive charges, to say nothing of the delays and exactions of every kind. An edict was issued ordering the investigation of these degrading charges; and most of them were abolished or reduced to just limits. . . . The lease of Customs duties being about to expire, Colbert improved this occasion to revise the tariff; and although this fatal measure has since been considered as the finest monument of his administration, we think we should present it in its true aspect, which seems to us to have been invariably misapprehended. Colbert's aim in revising the customs was to make them a means of protection for national manufactures, in the place of a simple financial resource, as they formerly were. Most articles of foreign manufacture had duties imposed upon them, so as to secure to similar French merchandise the home market. At the same time, Colbert spared neither sacrifices nor encouragement to give activity to the manufacturing spirit in our country. He caused the most skilful workmen of every kind to come from abroad; and he subjected manufactures to a severe discipline, that they should not lose their vigilance, relying on the tariffs. Heavy fines were inflicted on the manufacturers of an article recognized as inferior in quality to what it should be. For the first offence, the products of the delinquents were attached to a stake, with a carcan and the name of the manufacturer; in case of a second offence, the manufacturer himself was fastened to it. These draconian rigors would have led to results entirely contrary to those Colbert expected, if his enlightened solicitude had not tempered by other measures what was cruel in them. Thus, he appointed inspectors of the manufactures, who often directed the

workmen into the best way, and brought them information of the newest processes, purchased from foreign manufacturers, or secretly obtained at great expense. Colbert was far from attaching to the customs the idea of exclusive and blind protection that has ever been attributed to them since his ministry. He knew very well that these tariffs would engender reprisals, and that, while encouraging manufactures, they would seriously hinder commerce. Moreover, all his efforts tended to weaken their evil effects. His instructions to consuls and ambassadors testify strongly to his prepossessions in this regard. . . . The more one studies the administrative acts of this great minister, the more one is convinced of his lofty sense of justice, and of the liberal tendencies of his system, which has hitherto been generally extolled as hostile to the principle of commercial liberty. In vain the Italians have hailed it by the name of 'Colbertism,' to designate the exclusive system invented by themselves and honored by the Spanish: Colbert never approved the sacrifice of the greater part of his fellow citizens to a few privileged ones, nor the creation of endless monopolies for the profit of certain branches of industry. We may reproach him with having been excessively inclined to make regulations, but not with having enfeoffed France to a few spinners of wool and cotton. He had himself summed up in a few words his system in the memorial he presented to the king: 'To reduce export duties on provisions and manufactures of the kingdom; to diminish import duties on everything which is of use in manufactures; and to repel the products of foreign manufactures, by raising the duties.' Such was the spirit of his first tariff, published in September, 1664. He had especially aimed at facilitating the supply of raw materials in France, and promoting the interests of her home trade by the abolition of provincial barriers, and by the establishment of lines of customs-houses at the extreme frontiers. . . . The only reproach that can be justly made against him is the abuse of the protective instrument he had just created, by increasing in the tariff of 1667 the exclusive measures directed against foreign manufactures in that of 1664. It was no longer then a question of manufactures, but of war, namely, with Holland; and this war broke out in 1672. . . . From the same epoch date the first wars of commercial reprisals between France and England, hostilities which were to cost both nations so much blood and so many tears. Manufactures were then seen to prosper and agriculture to languish in France under the influence of this system."—J. A. Blanqui, *Hist. of Pol. Economy in Europe, ch.* 26.

(Pennsylvania): A. D. 1785.—Beginning of "Protection" in Pennsylvania.—"Before the Revolution Pennsylvania had always been slow to impose burdens on trade. While Massachusetts, New York and South Carolina were raising considerable sums from imposts, Pennsylvania commerce was free from restrictions. In 1780, however, the need of revenue overcame the predilection of the Quakers for free trade and they decided 'that considerable sums can be raised by a small impost on goods and merchandise imported into this state without burdening commerce.' Accordingly, low duties were laid on wines, liquors, molasses, sugar, cocoa and tea, with 1 per cent. on all other imports. In 1782 the duties were doubled and the revenue was appropriated to the defence of commerce on the Delaware river and bay. This was done at the request of the merchants who wished to have their interests protected and 'signified their willingness to submit to a further impost on the importation of goods for that purpose.' When peace came, however, the merchants at once represented it as detrimental to the interests of the state to continue the duties, and they were repealed. In 1784 low duties were again imposed, and later in the same year increased. Early in 1785 more careful provisions were made for their collection. September 20, came the important act 'to encourage and protect the manufactures of this state by laying additional duties on certain manufactures which interfere with them.' . . . More than forty of the articles which Pennsylvania had begun to make were taxed at high specific rates. Coaches and carriages, paid £10 to £20; clocks, 30s.; scythes, 15s. per dozen; beer, ale and porter, 6d. per gallon; soap or candles, 1d. per pound; shoes and boots, 1s. to 6s. per pair; cordage and ropes, 8s. 4d. per hundred weight; and so on. The ten per cent. schedule included manufactures of iron and steel, hats, clothing, books and papers, whips, canes, musical instruments and jewelry. . . . The Pennsylvania act is of importance because it shows the nature of commodities which the country was then producing, as well as because it formed the basis of the tariff of 1789."—W. Hill, *First Stages of the Tariff Policy of the United States, pp.* 53-54.—The preamble of the Pennsylvania act of 1785 set forth its reasons as follows: "Whereas, divers useful and beneficial arts and manufactures have been gradually introduced into Pennsylvania, and the same have at length risen to a very considerable extent and perfection, insomuch that in the late war between the United States of America and Great Britain, when the importation of European goods was much interrupted, and often very difficult and uncertain, the artizans and mechanics of this state were able to supply in the hours of need, not only large quantities of weapons and other implements, but also ammunition and clothing, without which the war could not have been carried on, whereby their oppressed country was greatly assisted and relieved. And whereas, although the fabrics and manufactures of Europe, and other foreign parts, imported into this country in times of peace, may be afforded at cheaper rates than they can be made here, yet good policy and a regard to the wellbeing of divers useful and industrious citizens, who are employed in the making of like goods, in this state, demand of us that moderate duties be laid on certain fabrics and manufactures imported, which do most interfere with, and which (if no relief be given) will undermine and destroy the useful manufactures of the like kind in this country, for this purpose. Be it enacted" &c.—*Pennsylvania Laws*, 1785.—The duties enacted, which were additional to the then existing impost of 2½ per cent., were generally specific, but ad valorem on some commodities as on British steel, 10 per cent.; earthen ware, the same; glass and glass-ware, 2½ per cent.; linens the same. Looked

at in the light of recent American tariffs, they would hardly be recognized as "protective" in their character; but the protective purpose was plainly enough declared.

(United States): A. D. 1789-1791.— The first tariff enactment.—Hamilton's Report on Manufactures. — The "American System" proposed.—"The immediate necessity of raising some ready money led to the passage of a tariff bill at the first session of Congress. It was prepared and carried through the House chiefly by Madison; and its contents, no less than the general tone of the debate in which it was discussed, showed a decided leaning towards the protective system. But this legislation was temporary, and was at the time known to be so. The permanent system of the country was left for subsequent and more leisurely development. When at last Congress felt able to give the subject due attention, it applied as usual to Hamilton to furnish information and opinions. A topic so important and so congenial to his tastes called forth his best exertions. A series of extensive investigations conducted by every feasible kind of inquiry and research, both in foreign parts and in the United States, furnished the material for his reflections. He took abundant time to digest as well as to collect the great mass of information thus acquired, and it was not until nearly two years had elapsed since the order for the report was passed that he sent in the document to the House of Representatives. . . . The inferences and arguments constituted as able a presentation of the protectionist theory as has ever been made. . . . It is, however, an incorrect construction of that report to regard it as a vindication of the general or abstract doctrine of protection. Hamilton was very far from assuming any such position; protection always and everywhere was not his theory; protection was not his ideal principle of commercial regulation. . . . So far from entertaining any predilection for protection in the abstract, it would seem that in a perfect commercial world he would have expected to find free trade the prevalent custom. . . . If free trade were the rule of the whole commercial world, Hamilton was not prepared to say that the United States would find it for her interest to be singular. But such were not the premises from which he had to draw a conclusion. . . . The report of Hamilton determined the policy of the country. For good or for evil protection was resorted to, with the avowed purpose of encouraging domestic manufacturing as well as of raising a revenue. . . . The principles upon which Hamilton based his tariff were not quite those of pure protection, but constituted what was known as the 'American System'; a system which has been believed in by former generations with a warmth of conviction not easy to withstand."—J. T. Morse, Jr., *Life of Alex. Hamilton, ch.* 11.— Hamilton's celebrated report opens with an elaborate argument to prove the desirability of manufacturing industries in the country, and then proceeds: "A full view having now been taken of the inducements to the promotion of manufactures in the United States, accompanied with an examination of the principal objections which are commonly urged in opposition, it is proper, in the next place, to consider the means by which it may be effected, as introductory to a specification of the objects which in the present state of things appear the most fit to be encouraged, and of the particular measures which it may be advisable to adopt in respect to each. In order to a better judgment of the means proper to be resorted to by the United States, it will be of use to advert to those which have been employed with success in other countries. The principle of these are:—I. Protecting duties, or duties on those foreign articles which are the rivals of the domestic ones intended to be encouraged. Duties of this nature evidently amount to a virtual bounty on the domestic fabrics, since by enhancing the charges on foreign articles they enable the national manufacturers to undersell all their foreign competitors. The propriety of this species of encouragement need not be dwelt upon, as it is not only a clear result from the numerous topics which have been suggested, but is sanctioned by the laws of the United States in a variety of instances; it has the additional recommendation of being a resource of revenue. Indeed, all the duties imposed on imported articles, though with an exclusive view to revenue, have the effect in contemplation; and, except where they fall on raw materials, wear a beneficent aspect towards the manufacturers of the country. II. Prohibitions of rival articles, or duties equivalent to prohibitions. This is another and an efficacious mean of encouraging manufactures; but in general it is only fit to be employed when a manufacture has made such a progress, and is in so many hands, as to insure a due competition and an adequate supply on reasonable terms. Of duties equivalent to prohibitions there are examples in the laws of the United States; and there are other cases to which the principle may be advantageously extended, but they are not numerous. Considering a monopoly of the domestic market to its own manufacturers as the reigning policy of manufacturing nations, a similar policy on the part of the United States, in every proper instance, is dictated, it might almost be said, by the principles of distributive justice; certainly by the duty of endeavoring to secure to their own citizens a reciprocity of advantages. III. Prohibitions of the exportation of materials of manufactures. The desire of securing a cheap and plentiful supply for the national workmen; and, where the article is either peculiar to the country, or of peculiar quality there, the jealousy of enabling foreign workmen to rival those of the nation with its own materials, are the leading motives to this species of regulation. It ought not to be affirmed that it is in no instance proper, but it is certainly one which ought to be adopted with great circumspection and only in very plain cases. IV. Pecuniary bounties. This has been found one of the most efficacious means of encouraging manufactures, and it is, in some views, the best, though it has not yet been practiced upon the government of the United States,— unless the allowance on the exportation of dried and pickled fish and salted meat could be considered as a bounty — and though it is less favored by public opinion than some other modes. Its advantages are these:—1. It is a species of encouragement more positive and direct than any other, and for that very reason has a more immediate tendency to stimulate and uphold new enterprises, increasing the chances of profit, and diminishing the risks of loss in the first attempts. 2. It avoids the inconvenience of a temporary augmentation

of price, which is incident to some other modes, or it produces it to a less degree, either by making no addition to the charges on the rival foreign article, as in the case of protecting duties, or by making a smaller addition. The first happens when the fund for the bounty is derived from a different object (which may or may not increase the price of some other article according to the nature of that object); the second when the fund is derived from the same or a similar object of foreign manufacture. One per cent. duty on the foreign article, converted into a bounty on the domestic, will have an equal effect with a duty of 2% exclusive of such bounty; and the price of the foreign commodity is liable to be raised in the one case in the proportion of 1%, in the other in that of 2%. Indeed, the bounty when drawn from another source, is calculated to promote a reduction of price, because, without laying any new charge on the foreign article, it serves to introduce a competition with it, and to increase the total quantity of the article in the market. 3. Bounties have not, like high protecting duties, a tendency to produce scarcity. An increase of price is not always the immediate, though where the progress of a domestic manufacture does not counteract a rise, it is commonly the ultimate effect of an additional duty. In the interval between the laying of the duty and a proportional increase of price, it may discourage importation by interfering with the profits to be expected from the sale of the article. 4. Bounties are sometimes not only the best, but the only proper expedient for uniting the encouragement of a new object of agriculture with that of a new object of manufacture. It is the interest of the farmer to have the production of the raw material promoted by counteracting the interference of the foreign material of the same kind. It is the interest of the manufacturer to have the material abundant and cheap. If prior to the domestic production of the material in sufficient quantity to supply the manufacturer on good terms, a duty be laid upon the importation of it from abroad, with a view to promote the raising of it at home, the interest both of the farmer and manufacturer will be disserved. By either destroying the requisite supply, or raising the price of the article beyond what can be afforded to be given for it by the conductor of an infant manufacture, it is abandoned or fails; and there being no domestic manufactories to create a demand for the raw material which is raised by the farmer, it is in vain that the competition of the like foreign article may have been destroyed. It cannot escape notice that a duty upon the importation of an article can no otherwise aid the domestic production of it than by giving the latter greater advantages in the home market. It can have no influence upon the advantageous sale of the article produced in foreign markets, no tendency, therefore, to promote its exportation. The true way to conciliate these two interests is to lay a duty on foreign manufactures of the material, the growth of which is desired to be encouraged, and to apply the produce of that duty by way of bounty either upon the production of the material itself, or upon its manufacture at home, or upon both. In this disposition of the thing the manufacturer commences his enterprise under every advantage which is attainable as to quantity or price of the raw material. And the farmer, if the bounty be immediately to him, is enabled by it to enter into a successful competition with the foreign material. . . . There is a degree of prejudice against bounties, from an appearance of giving away the public money without an immediate consideration, and from a supposition that they serve to enrich particular classes at the expense of the community. But neither of these sources of dislike will bear a serious examination. There is no purpose to which public money can be more beneficially applied than to the acquisition of a new and useful branch of industry, no consideration more valuable than a permanent addition to the general stock of productive labor. As to the second source of objection, it equally lies against other modes of encouragement, which are admitted to be eligible. As often as a duty upon a foreign article makes an addition to its price, it causes an extra expense to the community for the benefit of the domestic manufacturer. A bounty does no more. But it is the interest of the society in each case to submit to a temporary expense, which is more than compensated by an increase of industry and wealth, by an augmentation of resources and independence, and by the circumstance of eventual cheapness, which has been noticed in another place. It would deserve attention, however, in the employment of this species of encouragement in the United States, as a reason for moderating the degree of it in the instances in which it might be deemed eligible, that the great distance of this country from Europe imposes very heavy charges on all the fabrics which are brought from thence, amounting from 15% to 30% on their value according to their bulk. . . . V. Premiums. These are of a nature allied to bounties, though distinguishable from them in some important features. Bounties are applicable to the whole quantity of an article produced or manufactured or exported, and involve a correspondent expense. Premiums serve to reward some particular excellence or superiority, some extraordinary exertion or skill, and are dispensed only in a small number of cases. But their effect is to stimulate general effort. . . . VI. The exemption of the materials of manufactures from duty. The policy of that exemption, as a general rule, particularly in reference to new establishments, is obvious. . . . VII. Drawbacks of the duties which are imposed on the materials of manufactures. It has already been observed as a general rule, that duties on those materials ought, with certain exceptions, to be forborne. Of these exceptions, three cases occur which may serve as examples. One where the material is itself an object of general or extensive consumption, and a fit and productive source of revenue. Another where a manufacture of a simpler kind, the competition of which with a like domestic article is desired to be restrained, partakes of the nature of a raw material from being capable by a further process to be converted into a manufacture of a different kind, the introduction or growth of which is desired to be encouraged. A third where the material itself is the production of the country, and in sufficient abundance to furnish a cheap and plentiful supply to the national manufacturers. . . . Where duties on the materials of manufactures are not laid for the purpose of preventing a competition with some domestic production, the same reasons which recommend, as a general rule, the exemption of those materials from

duties, would recommend, as a like general rule, the allowance of drawbacks in favor of the manufacturer. . . . VIII. The encouragement of new inventions and discoveries at home, and of the introduction into the United States of such as may have been made in other countries; particularly those which relate to machinery. This is among the most useful and unexceptionable of the aids which can be given to manufactures. The usual means of that encouragement are pecuniary rewards, and, for a time, exclusive privileges. . . . IX. Judicious regulations for the inspection of manufactured commodities. This is not among the least important of the means by which the prosperity of manufactures may be promoted. It is indeed in many cases one of the most essential. Contributing to prevent frauds upon consumers at home and exporters to foreign countries, to improve the quality and preserve the character of the national manufactures; it cannot fail to aid the expeditious and advantageous sale of them, and to serve as a guard against successful competition from other quarters. . . . X. The facilitating of pecuniary remittances from place to place—is a point of considerable moment to trade in general and to manufactures in particular, by rendering more easy the purchase of raw materials and provisions, and the payment for manufactured supplies. A general circulation of bank paper, which is to be expected from the institution lately established, will be a most valuable mean to this end. . . . XI. The facilitating of the transportation of commodities. Improvements favoring this object intimately concern all the domestic interests of a community; but they may, without impropriety, be mentioned as having an important relation to manufactures. . . . The foregoing are the principal of the means by which the growth of manufactures is ordinarily promoted. It is, however, not merely necessary that the measures of government which have a direct view to manufactures should be calculated to assist and protect them; but that those which only collaterally affect them, in the general course of the administration, should be guarded from any peculiar tendency to injure them. There are certain species of taxes which are apt to be oppressive to different parts of the community, and, among other ill effects, have a very unfriendly aspect towards manufactures. All poll or capitation taxes are of this nature. They either proceed according to a fixed rate, which operates unequally and injuriously to the industrious poor; or they vest a discretion in certain officers to make estimates and assessments, which are necessarily vague, conjectural, and liable to abuse. . . . All such taxes (including all taxes on occupations) which proceed according to the amount of capital supposed to be employed in a business, or of profits supposed to be made in it, are unavoidably hurtful to industry."—A. Hamilton, *Report on Manufactures* (*Works, v.* 3).

(England): **A. D. 1815-1828.—The Corn Laws and Provision Laws.—The sliding-scale.**—During the Napoleonic wars in Europe there was a prolonged period of scarcity, approaching to famine, in Great Britain. There were scant harvests at home and supplies from abroad were cut off by the "Continental system" of Napoleon. "In 1801 wheat was 115 shillings and 11 pence per quarter; from 1801 to 1818 the price averaged 84s.; whilst in the 20 years ending 1874, it averaged only 52s. per quarter. . . . The cry of starvation was everywhere heard amongst the working classes, and tradesmen of all kinds suffered severely; whilst the only well-to-do people were the Farmers and the Landlords. As soon as the war was over, and our ports were opened for the reception of foreign grain, prices came down rapidly. Then the Landlords took alarm, and appealed to Parliament to resist the importation of foreign grain, which they asserted, would be the ruin of the English Farmers. They insisted that in this country, the costs of cultivation were extremely heavy, as compared with those of foreign producers of grain, and that therefore the British Farmer must receive protection in order to prevent his ruin. Hence a Parliament, composed mostly of Landlords, proceeded, in 1815, to enact the Corn Law, which excluded foreign wheat, except at high rates of duty, until the market price should reach 80s. per quarter; and other kinds of grain, until there was a proportionate elevation in prices. The discussions in Parliament on this question made a great impression, and led to a wide-spread sympathy, and to the belief that there was need of a measure, which, according to its advocates, would preserve our Agriculture from ruin, and be at the same time a provision against famine. But by many thoughtful and patriotic people this law was viewed with intense dislike, and was characterised as an atrocious fraud. The fact was, that . . . when rents ought either to have been lowered, or the methods of cultivation improved, the Corn Law was passed by the Landlords in order to keep out foreign corn and to maintain high rents; and many of the common people saw, or thought they saw, what would be the effect; for whilst the legislature was engaged in the discussion of the question, the people of London became riotous, and the walls were chalked with invectives such as 'Bread or Blood,' 'Guy Fawkes for ever,' etc. A loaf, steeped in blood, was placed on Carlton House, (now the Tory Club House.) The houses of some of the most unpopular of the promoters of the measure were attacked by the mob. At Lord Eldon's house the iron railings were torn up, whilst every pane of glass and many articles of furniture were broken and destroyed, and it was facetiously remarked that at last his lordship kept open house. The military were called out, and two persons were killed; the Houses of Parliament were guarded by soldiers, and, indeed, the whole of London appeared to be in possession of the Army. In various parts of the country similar disturbances prevailed. . . . Large popular meetings were held at Spa Fields, in London, public meetings were also held at Birmingham, and in many other parts of the kingdom. . . . In some of the towns and populous localities, the operatives having in view a large aggregate meeting to be held on St. Peter's field in Manchester, submitted themselves to marching discipline. . . . Regardless, however, of the public demonstrations of dislike to the Corn and Provision Laws, the Legislature persisted in upholding the most stringent provisions thereof until the year 1828, when the duties on the importation of

grain were adjusted by a sliding scale, in accordance with the average prices in the English market. The following abstract may serve to denote the provisions of the amended Law:—When the average price of wheat was 36 shillings the duty was 50 shillings 8 pence per qr.; when 46s. the duty was 40s. 8d. per qr.; when 56s. it was 30s. 8d. per qr.; when 62s. it was 24s. 8d. per qr.; when 72s. it was 2s. 8d. per qr.; and when 73s. it was 1s. per qr. It was soon found that as a means of protection to the British Farmer, the operation of the sliding scale of duties was scarcely less effective, by deterring imports of grain, than the previous law, which absolutely excluded wheat until it reached 80s. per quarter. The Act certainly provided that foreign grain might at any time be imported, and be held in bond till the duty was paid; a provision under which it was expected to be stored until the price should be high, and the duty low; but the expenses attendant upon warehousing and preserving it from injury by keeping, were usually looked upon as an undesirable or even dangerous investment of a merchant's capital. . . . Agricultural protection, as exhibited by the Corn Law, would, however, have been very incomplete without the addition of the Provision Laws. By these Laws the importation of Foreign Cattle and foreign meat were strictly prohibited. Butter and Lard were indeed allowed to be imported, but they were not to be used as food, and in order to provide against any infraction of the law, the officers at the Custom Houses were employed to 'spoil' these articles on their arrival, by smearing them with a tarred stick. They could then be used only as grease for wheels, or for the smearing of sheep. With bread purposely made dear, with the import of cattle and of flesh meat prohibited, and with lard and butter wilfully reduced from articles of food to grease for wheels, there is no difficulty in accounting for the frequent murmurs of discontent, and for the starvation among the poorer classes in every part of the Kingdom. Soup kitchens were opened almost every winter, and coals and clothing gratuitously distributed in many places; but such palliatives were regarded with derision by all who understood the true causes of the evil. Such help was scorned, and a cry for justice was raised; scarcity was said to be created by Act of Parliament, in order to be mitigated by philanthropy."—H. Ashworth, *Recollections of Richard Cobden, ch.* 1.

Also in D. Ricardo, *On Protection to Agriculture* (*Works, pp.* 459-498).—J. E. T. Rogers, *The Economic Interpretation of History, ch.* 17-18.

(United States): A. D. 1816-1824.— The beginning of the protective policy (the "American System").— "The return of peace at the beginning of 1815 brought the manufacturers face to face with a serious danger. War had been their harvest time. Favored by double duties and abnormal conditions their industry had attained a marvelous though not always safe development. . . . By limitation, the double duties were to expire one year after the conclusion of peace, and unless Congress intervened promptly and effectually their individual ruin was certain. . . . As new industries sprang up, petitions were promptly laid before Congress praying for new duties, for the permanence of the war duties, and for certain prohibitions. . . . In laying before Congress the treaty of peace, February, 1815, Madison called attention to the 'unparalleled maturity' attained by manufactures, and 'anxiously recommended this source of national independence and wealth to the prompt and constant guardianship of Congress.' . . . To Dallas, Secretary of the Treasury, the manufacturers had already turned. Six days after the treaty of peace was ratified, the House, February 23, 1815, called upon Dallas to report a general tariff bill at the next session of Congress. . . . In his annual report in December, 1815, Dallas had proposed the extension of the double duties until June 30, 1816, in order to give time for the elaboration of a new tariff bill; and after some discussion Congress agreed to this plan. February 13 he transmitted his reply to the resolutions of the previous February, closing with a carefully prepared schedule of new tariff rates. This, after being worked over in the Ways and Means Committee, was embodied in a bill and introduced into the House March 12, by Lowndes of South Carolina. Debate began March 20, and continued till April 8, when the bill was finally passed by a vote of 88 to 54. April 20 it passed the Senate with some amendments, and April 27 received the approval of Madison. . . . The features of Dallas' proposed tariff were the enlarging of the ad valorem list from three groups at 12½, 15, and 20 per cent to eight groups at 7½, 15, 20, 22, 28, 30, and 33½ per cent; the increase of specific duties by about 42 per cent; and, most important of all, in the article of coarse cottons, the insertion of a minimum, by which, as far as the custom-house was concerned, no quality was to be regarded as costing less than 25 cents per square yard. Except in the case of coarse cottons the new rates on articles which it was desired to protect fell slightly below the double rates of the war. Three positions were brought out in debate — two extremes, seeking the formulation of economic reasons for and against the policy of protection, and a middle party, composed mainly of men indifferent to manufacturing as such, but accepting the establishment of manufactures as one of the chief results of the war. . . . The two extremes, however, were far from taking the positions assumed later by extreme protectionism and extreme laissez-faire. . . . Only a few articles occasioned any discussion, and these were items like sugar, cottons, and woolens, which had been reduced in the Ways and Means Committee from the rates proposed by Dallas. Dallas had fixed the duty on cottons at 33½ per cent, which was reduced to 30 per cent in Lowndes' bill. Clay moved to restore the original rate. . . . Later Webster proposed a sliding scale on cottons, the rate to be 30 per cent for two years, then 25 per cent for two more, and then 20 per cent. Clay moved to amend by making the first period three years and the second one year. . . . Lowndes assented to the motion. . . . Dallas proposed 28 per cent on woolens. The committee reduced this to 25 per cent, and following the example set in the case of cottons, Lowndes moved that after two years the rate be fixed at 20 per cent. . . . After some debate the first period was made three years, and Lowndes' amendment agreed to. The tariff of 1816 was a substantial victory for the manufacturers. . . . But . . . in its working out the tariff of 1816 proved a bitter disappointment to the manufacturing in-

terest. The causes, however, were widely varied. . . . Yet it would be easy to exaggerate the distresses of the country. The years from 1816 to 1820 especially, were years of depression and hard times, but the steady growth of the country was hardly interrupted. In the main the tariff did not fail of its legitimate object. For the most part the new manufactures were conserved. . . . More and more there was a growing impatience with the tariff of 1816, and a tendency to lay the bad times upon its shoulders. . . . March 22, 1820, Baldwin of Pennsylvania, chairman of the newly created Committee on Manufactures, introduced a tariff bill embodying the general demand of the protected interests. . . . The bill passed the House by a vote of 90 to 69; it was defeated in the Senate by one vote."— O. L. Elliott, *The Tariff Controversy*, 1789–1833 (*Leland Stanford Junior University Monographs No.* 1), *pp.* 163–211.—"The revision of the Tariff, with a view to the protection of home industry, and to the establishment of what was then called, 'The American System,' was one of the large subjects before Congress at the session of 1823–24, and was the regular commencement of the heated debates on that question which afterwards ripened into a serious difficulty between the federal government and some of the southern States. . . . Revenue the object, protection the incident, had been the rule in the earlier tariffs: now that rule was sought to be reversed, and to make protection the object of the law, and revenue the incident. . . . Mr. Clay, the leader in the proposed revision, and the champion of the American System, expressly placed the proposed augmentation of duties on this ground. . . . Mr. Webster was the leading speaker on the other side, and disputed the universality of the distress which had been described; claiming exemption from it in New England; denied the assumed cause for it where it did exist, and attributed it to over expansion and collapse of the paper system, as in Great Britain, after the long suspension of the Bank of England; denied the necessity for increased protection to manufactures, and its inadequacy, if granted, to the relief of the country where distress prevailed. . . . The bill was carried in the House, after a protracted contest of ten weeks, by the lean majority of five — 107 to 102 — only two members absent, and the voting so zealous that several members were brought in upon their sick couches. In the Senate the bill encountered a strenuous resistance. . . . The bill . . . was carried by the small majority of four votes — 25 to 21. . . . An increased protection to the products of several States, as lead in Missouri and Illinois, hemp in Kentucky, iron in Pennsylvania, wool in Ohio and New York, commanded many votes for the bill; and the impending presidential election had its influence in its favor. Two of the candidates, Messrs. Adams and Clay, were avowedly for it; General Jackson, who voted for the bill, was for it, as tending to give a home supply of the articles necessary in time of war, and as raising revenue to pay the public debt."— T. H. Benton, *Thirty Years' View*, *v.* 1, *ch.* 13.

(United States): A. D. 1828.—The "Bill of Abominations."— New England changes front.—"In 1828 came another tariff bill, so bad and so extreme in many respects that it was called the 'bill of abominations.' It originated in the agitation of the woollen manufacturers which had started the year before, and for this bill Mr. Webster spoke and voted. He changed his ground on this important question absolutely and entirely, and made no pretence of doing anything else. The speech which he made on this occasion is a celebrated one, but it is so solely on account of the startling change of position which it announced. . . . A few lines from the speech give the marrow of the whole matter. Mr. Webster said: 'New England, sir, has not been a leader in this policy. . . . The opinion of New England up to 1824 was founded in the conviction that, on the whole, it was wisest and best, both for herself and others, that manufactures should make haste slowly. . . . When, at the commencement of the late war, duties were doubled, we were told that we should find a mitigation of the weight of taxation in the new aid and succor which would be thus afforded to our own manufacturing labor. Like arguments were urged, and prevailed, but not by the aid of New England votes, when the tariff was afterwards arranged at the close of the war in 1816. Finally, after a winter's deliberation, the act of 1824 received the sanction of both Houses of Congress and settled the policy of the country. . . . What, then, was New England to do? Was she to hold out forever against the course of the government, and see herself losing on one side and yet make no effort to sustain herself on the other? No, sir. Nothing was left to New England but to conform herself to the will of others. Nothing was left to her but to consider that the government had fixed and determined its own policy, and that policy was protection.' . . . Opinion in New England changed for good and sufficient business reasons, and Mr. Webster changed with it. Free trade had commended itself to him as an abstract principle, and he had sustained and defended it as in the interest of commercial New England. But when the weight of interest in New England shifted from free trade to protection Mr. Webster followed it."— H. C. Lodge, *Daniel Webster*, *ch.* 6.— "There was force in Webster's assertion, in reply to Hayne, that New England, after protesting against the tariff as long as she could, had conformed to a policy forced upon the country by others, and had embarked her capital in manufacturing. October 23, 1826, the Boston woollen manufacturers petitioned Congress for more protection. . . . This appeal of the woollen manufacturers brought out new demands from other quarters. Especially the wool-growers came forward. . . . May 14, 1827, the Pennsylvania Society for the Promotion of Manufactures and the Mechanic Arts called a convention of wool growers and manufacturers. The convention met at Harrisburg, July 30, 1827. It was found necessary to enlarge the scope of the convention in order to make allies of interests which would otherwise become hostile. The convention went on the plan of favoring protection on everything which asked for it. The result was that iron, steel, glass, wool, woollens, hemp, and flax were recommended for protection. Louisiana was not represented, and so sugar was left

out. It was voted to discourage the importation of foreign spirits and the distillation of spirits from foreign products, by way of protection to Western whiskey. . . . When the 20th Congress met, the tariff was the absorbing question. Popular interest had become engaged in it, and parties were to form on it, but it perplexed the politicians greatly. . . . The act which resulted from the scramble of selfish special interests was an economic monstrosity. . . . May 19, 1828, the bill became a law. The duty on wool costing less than 10 cents per pound was 15 per cent., on other wool 20 per cent. and 30 per cent. That on woollens was 40 per cent. for a year, then 45 per cent., there being four minima, 50 cents, $1.00, $2.50, $4.00. All which cost over $4.00 were to be taxed 45 per cent. for a year, then 50 per cent. . . . The process of rolling iron had not yet been introduced into this country. It was argued that rolled iron was not as good as forged, and this was made the ground for raising the tax on rolled iron from $30.00 to $37.00 per ton, while the tax on forged iron was raised from $18.00 to $22.40. Rolled iron was cheaper and was available for a great number of uses. The tax, in this case, 'countervailed' an improvement in the arts, and robbed the American people of their share in the advantage of a new industrial achievement. The tax on steel was raised from $20.00 to $30.00 per ton; that on hemp from $35.00 to $45.00 per ton; that on molasses from 5 cents to 10 cents per gallon; that on flax from nothing to $35.00 per ton. The tax on sugar, salt, and glass remained unchanged, and that on tea also, save by a differential tonnage duty. Coffee was classified and the tax reduced. The tax on wine, by a separate act, was reduced one half or more. This was the 'tariff of abominations,' so called on account of the number of especially monstrous provisions which it contained."—W. G. Sumner, *Andrew Jackson as a Public Man, ch.* 9.—"The tariff of 1828 . . . was the work of politicians and manufacturers; and was commenced for the benefit of the woollen interest, and upon a bill chiefly designed to favor that branch of manufacturing industry. But, like all other bills of the kind, it required help from other interests to get itself along."—T. H. Benton, *Thirty Years' View, v.* 1, *ch.* 34.—J. Schouler, *Hist. of the U. S., ch.* 12, *sect.* 2 (*v.* 3).

(United States): A. D. 1832.—Clay's delusive act to diminish revenue.—President Jackson, in his message of December, 1831, "invited attention to the fact that the public debt would be extinguished before the expiration of his term, and that, therefore, 'a modification of the tariff, which shall produce a reduction of the revenue to the wants of the government,' was very advisable. He added that, in justice to the interests of the merchant as well as the manufacturer, the reduction should be prospective, and that the duties should be adjusted with a view 'to the counteraction of foreign policy, so far as it may be injurious to our national interests.' This meant a revenue tariff with incidental retaliation. He had thus arrived at a sensible plan to avoid the accumulation of a surplus. Clay took the matter in hand in the Senate, or rather in Congress. . . . He recognized the necessity of reducing the revenue, but he would reduce the revenue without reducing protective duties. The 'American System' should not suffer. It must, therefore, not be done in the manner proposed by Jackson. He insisted upon confining the reduction to duties on articles not coming into competition with American products. . . . Instead of abolishing protective duties he would rather reduce the revenue by making some of them prohibitory. . . . When objection was made that this would be a defiance of the South, of the President, and of the whole administration party, he replied, as Adams reports, that 'to preserve, maintain and strengthen the American System, he would defy the South, the President and the devil.' He introduced a resolution in the Senate, 'that the existing duties upon articles imported from foreign countries, and not coming into competition with similar articles made or produced within the United States, ought to be forthwith abolished, except the duties upon wines and silks, and that those ought to be reduced; and that the Committee on Finance be instructed to report a bill accordingly.'" After long debate Clay's "tariff resolution was adopted, and in June, 1832, a bill substantially in accord with it passed both houses, known as the tariff act of 1832. It reduced or abolished the duties on many of the unprotected articles, but left the protective system without material change. As a reduction of the revenue it effected very little. . . . The reduction proposed by Clay, according to his own estimate, was not over seven millions; the reduction really effected by the new tariff law scarcely exceeded three millions. Clay had saved the American System at the expense of the very object contemplated by the measure. It was extremely short-sighted statesmanship. The surplus was as threatening as ever, and the dissatisfaction in the South grew from day to day."—C. Schurz, *Life of Henry Clay, ch.* 13 (*v.* 1).

(Germany): A. D. 1833.—The Zollverein.—"The German Customs Union (Deutsche Zollverein) is an association of states, having for its declared object to secure freedom of trade and commerce between the contracting states, and a common interest in the customs revenue. The terms of the union are expressed in the treaty between Prussia and the other states, dated 22d March, 1833, which may be regarded as the basis of the association. The states now [1844] forming the union are Prussia, Bavaria, Wurtemberg, Saxony, Hesse-Cassel, Hesse-Darmstadt, Baden, Nassau, the Thuringian states, Frankfort, Brunswick, Lippe-Schaumburg, and Luxemburg. The population of these, with the exception of the three last mentioned states, was, in 1839, 26,858,886. Including these three states, which have since joined the union, the present population cannot be less than twenty-seven millions and a half. The German powers which have not joined the union are Austria, with twelve millions of German subjects, and Hanover, Oldenburg, Holstein, the two Mecklenburgs, and the Hanse Towns, whose united population is about three millions more. The inhabitants of Germany are, therefore, divided

in the proportions of twenty-seven and a half within, to fifteen without, the sphere of the Zollverein. The treaty provides in the thirty-eighth article, for the admission of other German states, and the thirty-ninth article for the making of treaties with foreign states, but these latter are not admissible into the union. . . . The declared principle of the league — namely, the commercial and financial union of the German states — is not only one to which no foreign power has any right to object, but is excellent in itself; and is, in fact, the establishment of free trade among the associated states. . . . But it is not merely to its avowed principle that the league owes its successful accomplishment. There are other motives which have entered largely into the causes of its existence. In the first place, it has given practical effect to that vehement desire for national unity which so generally pervades the German mind. . . . Then, it so happened that this general desire for union fell in exactly with the policy of Prussia — a power which has not failed to seize so favourable an opportunity of extending her political influence, and occupying a position which, though of nominal equality, has in reality secured her predominance among the German states. To these inducements we regret to be obliged to add another — namely, the prevalent opinion in Germany that their manufacturing industry ought to be protected against foreign competition, and that the tariff of the Zollverein ought to be used as an instrument for the exclusion of foreign manufactures from the German market. . . . Although the Congress of Vienna had established a new Germanic confederation, (Deutsche Bund) and a federative diet charged with the maintenance of peace at home and abroad, yet it was soon perceived and felt that the kind of union obtained by means of this confederation was more formal than real. . . . The late King of Prussia was one of the first to perceive, that, in order to unite Germany in reality, something more cogent than the federative diet was indispensable. He found his own power rather weakened than strengthened by the addition of the Rhenish provinces, so long as they remained separated, not only by distance, but by the customs-barriers of intervening states, from his ancient territories. He accordingly effected, in 1829, a convention with those states, by which he became the farmer of their customs-revenues, and so removed the barriers between Eastern and Western Prussia. Some years, however, previous to this, the Prussian Government had deemed it expedient to comply with the demands of the manufacturers (especially those in the Rhenish provinces) for protection against foreign goods, which, since the peace, had begun to make their appearance; and on the 26th May, 1818, a new Prussian Tariff had been issued, which was designed to afford a moderate protection to the home industry, and which may be regarded as the groundwork of the present Tariff of the Zollverein. . . . But the proceedings of Prussia were considered in a hostile light by the manufacturers of the South. They formed a counteracting association in 1819 which numbered from five to six thousand members, had its headquarters in Nuremberg, and agents in all the principal towns, and published a weekly newspaper devoted to the cause. They addressed the Diet, the German courts, and the Congress at Vienna in 1820, in favor of a general customs-union. They so far succeeded that, in 1826, the small Thuringian States, occupying the central portion of Germany, with one or two others, formed themselves into a customs-union, under the name of the Mittel-Verein; and within the two succeeding years a more important union was accomplished, consisting of Bavaria and Wurtemberg, with their small enclosed states; the Tariff of which union is stated to have been as high, or very nearly so, as that of Prussia. Thus Germany contained three separate customs-associations, with separate Tariffs, and it became obviously desirable to unite these conflicting interests. Prussia made overtures to the other unions, but was for a long time unsuccessful; they objecting principally to the high scale of Prussian duties on colonial produce. At last, however, all obstacles were removed, (principally, as Dr. List states, through the exertions of Baron von Cotta, the eminent publisher, and proprietor of the Allgemeine Zeitung,) and on the 22d of March, 1833, the treaty was signed by which, for the first time, Germany was knit together in anything like a binding national confederation. Between that date and the present, the league has been enlarged by the accession of other states; but, as we have already mentioned, Hanover and some other northern states have hitherto refused to join it. Hanover formed a distinct union with three neighbouring states, viz.: Brunswick, Lippe-Schaumburg, and Oldenburg, which assumed the title of the North-western League; but the two former having subsequently seceded from it and joined the Zollverein, the North-western League has been reduced to Hanover and Oldenburg only. The Hanse towns, Mecklenburg, and Holstein, are not yet members of any customs-union. The revenues of the Zollverein are divided among the contracting states according to the population of each state respectively."—*Edinburgh Review, Jan.*, 1844 (*v.* 79, *p.* 108).

(England): A. D. 1836-1839.—Beginning of the Anti-Corn-Law agitation.—"Cobden was in no sense the original projector of an organized body for throwing off the burden of the corn duties. In 1836 an Anti-Corn-Law Association had been formed in London; its principal members were the parliamentary radicals, Grote, Molesworth, Joseph Hume, and Mr. Roebuck. But this group, notwithstanding their acuteness, their logical penetration, and the soundness of their ideas, were in that, as in so many other matters, stricken with impotence. Their gifts of reasoning were admirable, but they had no gifts for popular organization. . . . It was not until a body of men in Manchester were moved to take the matter in hand, that any serious attempt was made to inform and arouse the country. The price of wheat had risen to seventy-seven shillings in the August of 1838; there was every prospect of a wet harvesting; the revenue was declining; deficit was becoming a familiar word; pauperism was increasing; and the manufacturing population of Lancashire were finding it impossible to support themselves, because the landlords, and the legislation of a generation of landlords before them, insisted on keeping the first necessity of life at an artificially high rate.

. . . In October, 1838, a band of seven men met at a hotel in Manchester, and formed a new Anti-Corn Law Association. They were speedily joined by others, including Cobden, who from this moment began to take a prominent part in all counsel and action. That critical moment had arrived, which comes in the history of every successful movement, when a section arises within the party, which refuses from that day forward either to postpone or to compromise. The feeling among the older men was to stop short in their demands at some modification of the existing duty. . . . The more energetic members protested against these faltering voices. . . . The meeting was adjourned, to the great chagrin of the President, and when the members assembled a week later, Cobden drew from his pocket a draft petition which he and his allies had prepared in the interval, and which after a discussion of many hours was adopted by an almost unanimous vote. The preamble laid all the stress on the alleged facts of foreign competition, in words which never fail to be heard in times of bad trade. It recited how the existing laws prevented the British manufacturer from exchanging the produce of his labour for the corn of other countries, and so enabled his foreign rivals to purchase their food at one half of the price at which it was sold in the English market; and finally the prayer of the petition called for the repeal of all laws relating to the importation of foreign corn and other foreign articles of subsistence, and implored the House to carry out to the fullest extent, both as affects manufactures and agriculture, the true and peaceful principles of free-trade. In the following month, January, 1839, the Anti-Corn-Law Association showed that it was in earnest in the intention to agitate, by proceeding to raise a subscription of an effective sum of money. Cobden threw out one of those expressions which catch men's minds in moments when they are already ripe for action. 'Let us,' he said, 'invest part of our property, in order to save the rest from confiscation.' Within a month £6,000 had been raised, the first instalment of many scores of thousands still to come. A great banquet was given to some of the parliamentary supporters of Free Trade; more money was subscribed, convictions became clearer and purpose waxed more resolute. On the day after the banquet, at a meeting of delegates from other towns, Cobden brought forward a scheme for united action among the various associations throughout the country. This was the germ of what ultimately became the League."—J. Morley, *Life of Richard Cobden, ch.* 6 (*v.* 1).

Also in W. Robertson, *Life and Times of John Bright, ch.* 8 *and* 11-14.

(England): A. D. 1842.—Peel's modification of the Corn Laws.—His sliding-scale.—His Tariff reductions.—The first great step towards Free-Trade.—The Whig administration under Lord Melbourne gave way in August, in 1841, to one formed by Sir Robert Peel. On the opening of the session in February, 1842, "The Queen's Speech recommended Parliament to consider the state of the laws affecting the importation of corn and other commodities. It announced the beginning of a revolution which few persons in England thought possible, although it was to be completed in little more than ten years. On the 9th of February Peel moved that the House should resolve itself into a Committee to consider the Corn Laws. His speech, which lasted nearly three hours, was necessarily dull, and his proposal was equally offensive to the country gentlemen and to the Anti-Corn Law League. It amounted merely to an improvement of the sliding-scale which had been devised by the Duke of Wellington's Cabinet [See above: A. D. 1815–1828], and was based on the axiom that the British farmer, taking one year with another, could not make a profit by growing corn if foreign corn were admitted at a price of less than 70s. a quarter. By a calculation of prices extending over a long term of years, Peel had satisfied himself that a price of 56s. a quarter would remunerate the British farmer. He proposed to modify the sliding-scale accordingly. . . . Peel retained the minimum duty of 1s. when corn was selling at 73s. the quarter; he fixed a maximum duty of 20s. when corn was selling at from 50s. to 51s. the quarter, and he so altered the graduation in the increase of duty as to diminish the inducement to hold grain back when it became dear. . . . So general was the dissatisfaction with Peel's Corn Law that Russell ventured once more to place before the House his alternative of a fixed 8s. duty. He was defeated by a majority of upwards of 120 votes. Two days later Mr. Villiers made his annual motion for the total repeal of the Corn Laws, and was beaten by more than four votes to one. The murmurs of Peel's own supporters were easily overborne, and the Bill was carried through the House of Commons after a month spent in debates. As soon as it had passed, and the estimates for the army and navy had been voted, Peel produced what was really his Budget, nominally Mr. Goulburn's. . . . In every one of the last five years there had been a deficit. . . . Peel therefore resolved 'to impose an income tax." He also raised the duty on Irish spirits and on exports of coal, besides making some changes in the stamp duties. "With these and with the income tax he calculated that he would have a surplus of £1,900,000. Peel was thus able to propose a reduction of the tariff upon uniform and comprehensive principles. He proposed to limit import duties to a maximum of 5 per cent. upon the value of raw materials, of 12 per cent. upon the value of goods partly manufactured, and of 20 per cent. upon the value of goods wholly manufactured. Out of the 1,200 articles then comprised in the tariff, 750 were more or less affected by the application of these rules, yet so trivial was the revenue raised from most of them that the total loss was computed at only £270,000 a year. Peel reduced the duty on coffee; he reduced the duty on foreign and almost entirely abolished the duty on Canadian timber. Cattle and pigs, meat of all descriptions, cheese and butter, which had hitherto been subject to a prohibitory duty, he proposed to admit at a comparatively low rate. He also diminished the duty upon stage coaches. So extensive a change in our system of national finance had never before been effected at one stroke. . . . Immense was the excitement caused by the statement of the Budget. . . . Every part of Peel's scheme was debated with the utmost energy. . . . He procured the ratification of all his measures subject to some slight amendments, and at the cost of a whole session spent

in discussing them. Little or nothing else was accomplished by Parliament in this year. Peel had returned to power as the Champion of protection. His first great achievement was the extension of the freedom of trade."—F. G. Montague, *Life of Sir Robert Peel, ch.* 8.—"Notwithstanding the objections which free traders might raise, the Budget of 1842 proved the first great advance in the direction of free trade. It did not remove the shackles under which trade was struggling, but it relaxed the fastenings and lightened the load."—S. Walpole, *Hist. of Eng. from* 1815, *ch.* 18 (*v.* 4).

Also in: S. Walpole, *Life of Sir Robert Peel, v.* 3, *ch.* 5.—J. Morley, *Life of Richard Cobden, v.* 1, *ch.* 11.

(United States): A. D. 1842.—An Act to provide a necessary increase of revenue, with incidental protection.—"There had been a lull in tariff legislation for ten years. The free-trade party had been ascendant; and amendment of the law, save in the slight ways mentioned, had been impossible. During the decade, a financial tornado had swept over the country; the United-States bank had ceased to be; the experiment of keeping the government deposits with the State banks had been tried, and had failed; the government had kept them several years without authority, but finally a bill had been passed which authorized keeping them in that manner. The time had now nearly come for reducing the duties [by the gradual scaling down provided for in the Compromise tariff act of 1833] to their lowest point. Manufactures were drying up at the root. A material augmentation of the national revenue from some source had become necessary. . . . Whatever difference of opinion existed respecting the necessity of additional protection to manufacturers, some expedient, it was universally conceded, must be adopted to increase the public revenue. As no one favored direct taxation, a revision of the tariff was the only mode of enriching the treasury. . . . The committee on manufactures did not report to the House until the last of March, 1842. . . . The leading provisions of the bill reported by the committee were the following: 1. A general ad valorem duty of 30 per cent, with few exceptions, where the duty was on that principle. 2. A discrimination was made for the security of certain interests requiring it by specific duties, in some instances below, in others above, the rate of the general ad valorem duty. 3. As a general principle, the duty on the articles subject to discrimination was made at the rate at which it was in 1840, after the deduction of four-tenths of the excess on 20 per cent by the Act of 1833. . . . The subject was discussed at great length by the House, although the time was drawing near for making the last reduction under the compromise law of [1833]. Something must be done. Accordingly, Fillmore, chairman of the committee of ways and means, reported a bill to extend the existing tariff laws until the 1st day of August, 1842, which was immediately passed by the House; but the Senate amended the bill by adding a proviso that nothing therein contained should suspend the operation of the Distribution law,—a law passed at the extra session of the preceding year, distributing the proceeds of the sales of the public lands among the States. . . . In the debate on this bill the proviso became a prominent topic of discussion. The distribution Act contained a proviso, that, if at any time the duties under the compromise tariff should be raised, the distribution should cease, and be suspended until the cause of the suspension were removed. . . . Those who were in favor of high protective duties desired the removal of the proviso of the distribution Act in order that the tariff might be raised without interfering with distribution. The House having rejected an amendment proposing to strike out the proviso which prohibited the suspension of the distribution law, the bill was passed by the House, and afterward by the Senate, but vetoed by the President. Another tariff bill was introduced by Mr. Fillmore, drawn by the Secretary of the Treasury,—to which, however, the committee added a proviso that the . . . proceeds of the public lands should be distributed, notwithstanding the increase of duties,—which passed both Houses after a short debate. This contained a revision of a considerable number of duties, and was also vetoed by the President. Impelled by the necessity of providing additional revenue, a bill was rapidly pushed through Congress, similar to that previously passed, with the omission of the proviso requiring distribution, and further modified by admitting free of duty tea and coffee growing east of the Cape of Good Hope, imported in American vessels. This bill was approved by the President. A separate bill was then passed, repealing the proviso of the distribution Act, and allowing the distribution to take place, notwithstanding the increase of duties; but the bill was retained by the President and defeated. Thus ended a long and bitter controversy, in which public sentiment expanded, and hardened against the chief Executive of the nation. . . . That tariff remained without change during the next four years."—A. S. Bolles, *Financial Hist. of the U. S.*, 1789–1860, *bk.* 3, *ch.* 6.

(England): A. D. 1845-1846.—The Repeal of the Corn Laws.—Dissolution of the League.—"The Anti-Corn-Law agitation was one of those movements which, being founded on right principles, and in harmony with the interest of the masses, was sure to gather fresh strength by any event affecting the supply of food. It was popular to attempt to reverse a policy which aimed almost exclusively to benefit one class of society. . . . The economic theorists had the mass of the people with them. Their gatherings were becoming more and more enthusiastic. And even amidst Conservative landowners there were not a few enlightened and liberal minds who had already, silently at least, espoused the new ideas. No change certainly could be expected to be made so long as bread was cheap and labour abundant. But when a deficient harvest and a blight in the potato crop crippled the resources of the people and raised grain to famine prices, the voice of the League acquired greater power and influence. Hitherto they had received hundreds of pounds. Now, thousands were sent in to support the agitation. A quarter of a million was readily contributed. Nor were the contributors Lancashire mill-owners exclusively. Among them were merchants and bankers, men of heart and men of mind, the poor labourer and the peer of the realm. The fervid oratory of Bright, the demonstrative and argumentative reasoning of Cobden, the more popular appeals of Fox, Rawlins, and other platform speakers, filled the newspaper press, and were eagerly read. And when

Parliament dissolved in August 1845, even Sir Robert Peel showed some slight symptoms of a conviction that the days of the corn laws were numbered. Every day, in truth, brought home to his mind a stronger need for action, and as the ravages of the potato disease progressed, he saw that all further resistance would be absolutely dangerous. A cabinet council was held on October 31 of that year to consult as to what was to be done, and at an adjourned meeting on November 5 Sir Robert Peel intimated his intention to issue an order in council remitting the duty on grain in bond to one shilling, and opening the ports for the admission of all species of grain at a smaller rate of duty until a day to be named in the order; to call Parliament together on the 27th inst., in order to ask for an indemnity, and a sanction of the order by law; and to submit to Parliament immediately after the recess a modification of the existing law, including the admission at a nominal duty of Indian corn and of British colonial corn. A serious difference of opinion, however, was found to exist in the cabinet on the question brought before them, the only ministers supporting such measures being the Earl of Aberdeen, Sir James Graham, and Mr. Sidney Herbert. Nor was it easy to induce the other members to listen to reason. And though at a subsequent meeting, held on November 28, Sir Robert Peel so far secured a majority in his favour, it was evident that the cabinet was too divided to justify him in bringing forward his measures, and he decided upon resigning office. His resolution to that effect having been communicated to the Queen, her Majesty summoned Lord John Russell to form a cabinet, and, to smooth his path, Sir Robert Peel, with characteristic frankness, sent a memorandum to her Majesty embodying a promise to give him his support. But Lord John Russell failed in his efforts, and the Queen had no alternative but to recall Sir Robert Peel, and give him full power to carry out his measures. It was under such circumstances that Parliament was called for January 22, 1846, and on January 27 the Government plan was propounded before a crowded House. It was not an immediate repeal of the corn laws that Sir Robert Peel recommended. He proposed a temporary protection for three years, till February 1, 1849, imposing a scale during that time ranging from 4s. when the price of wheat should be 50s. per quarter and upward, and 10s. when the price should be under 48s. per quarter, providing, however, that after that period all grain should be admitted at the uniform duty of 1s. per quarter. The measure, as might have been expected, was received in a very different manner by the political parties in both Houses of Parliament. There was treason in the Conservative camp, it was said, and keen and bitter was the opposition offered to the chief of the party. For twelve nights speaker after speaker indulged in personal recriminations. They recalled to Sir Robert Peel's memory the speeches he had made in defence of the corn laws. And as to his assertion that he had changed his mind, they denied his right to do so. . . . The passing of the measure was, however, more than certain, and after a debate of twelve nights' duration on Mr. Miles's amendment, the Government obtained a majority of 97, 337 having voted for the motion and 240 against it. And from that evening the corn law may be said to have expired. Not a day too soon, certainly, when we consider the straitened resources of the country as regards the first article of food, caused not only by the bad crop of grain, but by the serious loss of the potato crop, especially in Ireland."—L. Levi, *Hist. of British Commerce, pt.* 4, *ch.* 4.—"On the 2nd of July the League was 'conditionally dissolved,' by the unanimous vote of a great meeting of the leaders at Manchester. . . . Mr. Cobden here joyfully closed his seven years' task, which he had prosecuted at the expense of health, fortune, domestic comfort, and the sacrifice of his own tastes in every way. . . . Mr. Cobden had sacrificed at least £20,000 in the cause. The country now, at the call of the other chief Leaguers, presented him with above £80,000 — not only for the purpose of acknowledging his sacrifices, but also to set him free for life for the political service of his country."—H. Martineau, *Hist. of the Thirty Years' Peace, bk.* 6, *ch.* 15 (*v.* 4).

Also in: W. C. Taylor, *Life and Times of Sir Robert Peel, v.* 3, *ch.* 8-10.—J. Morley, *Life of Richard Cobden, v.* 1, *ch.* 15-16.—M. M. Trumbull, *The Free Trade Struggle in England.*—A. Bisset, *Notes on the Anti-Corn Law Struggle.*—*Debate upon the Corn Laws in Session* 1846.

(United States): A. D. 1846-1861.—Lowered duties and the disputed effects.—"In 1846 was passed what we will call the 'Walker tariff,' from Robert J. Walker, then Secretary of the Treasury. It reduced the duties on imports down to about the standard of the 'Compromise' of 1833. It discriminated, however, as the Compromise did not, between goods that could be produced at home and those that could not. It approached, in short, more nearly than any other, in its principles and details, to the Hamilton tariff, although the general rate of duties was higher. From that time up to 1857 there was a regular and large increase in the amount of dutiable goods imported, bringing in a larger revenue to the government. The surplus in the treasury accumulated, and large sums were expended by the government in buying up its own bonds at a high premium, for the sake of emptying the treasury. Under these circumstances the 'tariff of 1857' was passed, decidedly lowering the rates of duties and largely increasing the free list. The financial crisis of that year diminished the imports, and the revenue fell off $22,000,000. It rallied, however, the next two years, but owing to the large increase of the free list, not quite up to the old point."—A. L. Perry, *Elements of Pol. Economy, p.* 464.—"The free-traders consider the tariff of 1846 to be a conclusive proof of the beneficial effect of low duties. They challenge a comparison of the years of its operation, between 1846 and 1857, with any other equal period in the history of the country. Manufacturing, they say, was not forced by a hot-house process to produce high-priced goods for popular consumption, but was gradually encouraged and developed on a healthful and self-sustaining basis, not to be shaken as a reed in the wind by every change in the financial world. Commerce, as they point out, made great advances, and our carrying trade grew so rapidly that in ten years from the day the tariff of 1846 was passed our tonnage exceeded the tonnage of England. The free-traders refer with especial emphasis to what they term the symmetrical development of all the great interests of the country under this

liberal tariff. Manufactures were not stimulated at the expense of the commercial interest. Both were developed in harmony, while agriculture, the indispensable basis of all, was never more flourishing. The farmers and planters at no other period of our history were in receipt of such good prices, steadily paid to them in gold coin, for their surplus product, which they could send to the domestic market over our own railways and to the foreign market in our own ships. Assertions as to the progress of manufactures in the period under discussion are denied by the protectionists. While admitting the general correctness of the free-trader's statements as to the prosperous condition of the country, they call attention to the fact that directly after the enactment of the tariff of 1846 the great famine occurred in Ireland, followed in the ensuing years by short crops in Europe. The prosperity which came to the American agriculturist was therefore from causes beyond the sea and not at home,— causes which were transient, indeed almost accidental. Moreover an exceptional condition of affairs existed in the United States in consequence of our large acquisition of territory from Mexico at the close of the war and the subsequent and almost immediate discovery of gold in California. A new and extended field of trade was thus opened in which we had the monopoly, and an enormous surplus of money was speedily created from the products of the rich mines on the Pacific coast. At the same time Europe was in convulsion from the revolutions of 1848, and production was materially hindered over a large part of the Continent. This disturbance had scarcely subsided when three leading nations of Europe, England, France, and Russia, engaged in the wasteful and expensive war of the Crimea. The struggle began in 1853 and ended in 1856, and during those years it increased consumption and decreased production abroad, and totally closed the grain-fields of Russia from any competition with the United States. The protectionists therefore hold that the boasted prosperity of the country under the tariff of 1846 was abnormal in origin and in character. . . . The protectionists maintain that from 1846 to 1857 the United States would have enjoyed prosperity under any form of tariff, but that the moment the exceptional conditions in Europe and in America came to an end, the country was plunged headlong into a disaster [the financial crisis of 1857] from which the conservative force of a protective tariff would in large part have saved it. . . . The free-traders, as an answer to this arraignment of their tariff policy, seek to charge responsibility for the financial disasters to the hasty and inconsiderate changes made in the tariff in 1857, for which both parties were in large degree if not indeed equally answerable." —J. G. Blaine, *Twenty Years of Congress, v.* 1, *ch.* 9.

(England): A. D. 1846-1879.—Total abandonment of Protection and Navigation Laws. —The perfected tariff of Free Trade.—"With the fall of the principle of the protection in corn may be said to have practically fallen the principle of protection in this country altogether. That principle was a little complicated in regard to the sugar duties and to the navigation laws. The sugar produced in the West Indian colonies was allowed to enter this country at rates of duty much lower than those imposed upon the sugar grown in foreign lands. The abolition of slavery in our colonies had made labour there somewhat costly and difficult to obtain continuously, and the impression was that if the duties on foreign sugar were reduced, it would tend to enable those countries which still maintained the slave trade to compete at great advantage with the sugar grown in our colonies by that free labour to establish which England had but just paid so large a pecuniary fine. Therefore, the question of Free Trade became involved with that of free labour; at least, so it seemed to the eyes of many a man who was not inclined to support the protective principle in itself. When it was put to him, whether he was willing to push the Free Trade principle so far as to allow countries growing sugar by slave labour to drive our free grown sugar out of the market, he was often inclined to give way before this mode of putting the question, and to imagine that there really was a collision between Free Trade and free labour. Therefore a certain sentimental plea came in to aid the Protectionists in regard to the sugar duties. Many of the old anti-slavery party found themselves deceived by this fallacy, and inclined to join the agitation against the reduction of the duty on foreign sugar. On the other hand, it was made tolerably clear that the labour was not so scarce or so dear in the colonies as had been represented, and that colonial sugar grown by free labour really suffered from no inconvenience except the fact that it was still manufactured on the most crude, old fashioned, and uneconomical methods. Besides, the time had gone by when the majority of the English people could be convinced that a lesson on the beauty of freedom was to be conveyed to foreign sugar-growers and slave-owners by the means of a tax upon the products of their plantations. Therefore, after a long and somewhat eager struggle, the principle of Free Trade was allowed to prevail in regard to sugar. The duties on sugar were made equal. The growth of the sugar plantations was admitted on the same terms into this country, without any reference either to the soil from which it had sprung or to the conditions under which it was grown."—J. McCarthy, *The Epoch of Reform, ch.* 12.—"The contest on the Navigation Laws [finally repealed in 1849—see NAVIGATION LAWS: A. D. 1849] was the last pitched battle fought by the Protectionist party. Their resistance grew fainter and fainter, and a few occasional skirmishes just reminded the world that such a party still existed. Three years afterwards their leaders came into power. In February, 1852, the Earl of Derby became Prime Minister, and Mr. Disraeli Chancellor of the Exchequer and leader of the House of Commons. The Free-traders, alarmed at the possibility of some attempt to reverse the policy of commercial freedom which had been adopted, took the earliest opportunity of questioning those Ministers in Parliament on the subject. The discreet reply was that the Government did not intend to propose any return to the policy of protection during the present Session, nor at any future time, unless a great majority of members favourable to that policy should be returned to Parliament. But far from this proving to be the case, the general election which immediately ensued reinstated a Liberal Government, and the work of stripping off the few rags of protection that still

hung on went rapidly forward. On the 18th of April, 1853, Mr. Gladstone, as Chancellor of the Exchequer, made his financial statement in an able and luminous speech. Such was the admirable order in which he marshalled his topics, and the transparent lucidity with which he treated them, that although his address occupied five hours in the delivery, and although it bristled with figures and statistics, he never for a moment lost the attention or fatigued the minds of his hearers. Mr. Gladstone's financial scheme included, among other reforms, the reduction or total remission of imposts on 133 articles. In this way, our tariff underwent rapid simplification. Each subsequent year was marked by a similar elimination of protective impediments to free commercial intercourse with other countries. In 1860, butter, cheese, &c., were admitted duty free; in 1869, the small nominal duty that had been left on corn was abolished; in 1874, sugar was relieved from the remnant of duty that had survived from previous reductions. It would be superfluous, as well as tedious, to enter upon a detailed reference to the various minor reforms through which we advanced towards, and finally reached, our present free-trade tariff. In fact, all the great battles had been fought and won by the close of the year 1849, and the struggle was then virtually over. . . . Is our present tariff one from which every shred and vestige of protection have been discarded? Is it truly and thoroughly a free-trade tariff? That these questions must be answered in the affirmative it is easy to prove in the most conclusive manner. We raise about £20,000,000 of our annual revenue by means of customs' duties on the foreign commodities which we import, and this fact is sometimes adduced by the advocates for protection, without any explanation, leaving their readers to infer that ours is not, as it really is, a free-trade tariff. That such an inference is totally erroneous will presently be made manifest beyond all question. We now levy import duties on only fifteen articles. Subjoined is a list of them, and to each is appended the amount of duty levied on it during the financial year ending 1st of April, 1879. Not produced in England: Tobacco, £8,589,681; Tea, 4,169,233; Wine, 1,469,710; Dried Fruit, 509,234; Coffee, 212,002; Chicory, 66,739; Chocolate and Cocoa, 44,671; Total, £15,061,270. Produced also in England: Spirits, £5,336,058; Plate (Silver and Gold), 5,853; Beer, 3,814; Vinegar, 671; Playing Cards, 522; Pickles, 17; Malt, 6; Spruce, 3; Total, £5,346,944. Total of both £20,408,214. It will be seen by the above figures that £15,000,000, or three-fourths of the total sum levied, is levied on articles which we do not and cannot produce in England. It is clear, therefore, that this portion of the import duties cannot by any possibility be said to afford the slightest 'protection to native industry.' Every shilling's worth which we consume of those articles comes from abroad, and every shilling extra that the consumer pays for them in consequence of the duty goes to the revenue. So much for that portion of the £20,400,000 import duties. As to the £5,336,000 levied on foreign spirits, it consists of import duties which are only the exact counterpart of the excise duties, levied internally on the produce of the British distillers. The foreign article is placed on precisely the same footing as the native article. Both have to pay the same duty of about 10s. per gallon on spirits of the same strength. It would of course be an absurd stultification to admit foreign spirits duty-free while the English producer was burdened with a tax of 10s. per gallon; but by making the excise duty and the customs' duty precisely the same, equality is established, and no protection or preference whatever is enjoyed by the native distiller. The excise duty levied in the aforesaid year ending April, 1879, on spirits the produce of British distilleries, was no less than £14,855,000. The trifling amounts raised on plate, beer, vinegar, &c., are explained in the same way. They also act as a mere counterpoise to the excise duties levied on the British producers of the same articles, and thus afford to the latter no protection whatever against foreign competition. It is evident, therefore, that our tariff does not retain within it one solitary shred of protection."—A. Mongredien, *Hist. of the Free Trade Movement in Eng., ch.* 13.

(France): A. D. 1853-1860.—Moderation of Protective duties.—The Cobden-Chevalier Commercial Treaty.—After the fall of Napoleon and the restoration of the Bourbons in France, the protective system was pushed to so great an extreme that it became in some instances avowedly prohibitive. "The first serious attempt to alter this very severe restrictive system was reserved for the Second Empire. The English reforms of Peel proved the possibility of removing most of the barriers to commerce that legislation had set up, and consequently Napoleon III. entered with moderation on the work of revision. Between 1853 and 1855 the duties on coal, iron, steel, and wool were lowered, as also those on cattle, corn, and various raw materials, the requirements for ship-building being allowed in free. The legislative body was, however, with difficulty brought to consent to these measures. A more extensive proposal—made in 1856—to remove all prohibitions on imports, while retaining protective duties of 30% on woollen and 35% on cotton goods, had to be withdrawn, in consequence of the strong opposition that it excited. The interest of the consumers was in the popular opinion entirely subordinate to that of the iron-masters, cotton-spinners, and agriculturists—one of the many instances which shows that the long continuance of high duties does not facilitate the introduction of free competition. It was under such discouraging circumstances that the famous Commercial Treaty of 1860 with England was negotiated. This important measure (the work of Chevalier and Cobden, but owing a good deal of its success to the efforts of the Emperor and M. Rouher), though only a finishing step in English tariff reform, inaugurated a new era in France."—C. F. Bastable, *The Commerce of Nations, ch.* 8.—"By the treaty of commerce of 1860, France engaged to abolish all prohibitions, and to admit certain articles of British produce and manufacture at duties not exceeding 30 per cent. ad valorem, to be further reduced to duties not exceeding 25 per cent. from the 1st October, 1864. Britain, on the other hand, bound herself to abolish the duties on French silks and other manufactured goods, and to reduce the duties on French wines and brandies. As regards coals, France engaged to

reduce the import duty, and both contracting parties engaged not to prohibit exportation of coal, and to levy no duty upon such exports. Whilst both contracting parties engaged to confer on the other any favour, privilege, or reduction in the tariff of duties on imports on the articles mentioned in the treaty which the said power might concede to any third power; and also not to enforce, one against another, any prohibition of importation or exportation which should not at the same time be applicable to all other nations. The sum and substance of the treaty was, that France engaged to act more liberally for the future than she had done for the past, and England made another step in the way of liberalising her tariff, and placing all her manufactures under the wholesome and invigorating influence of free competition. Nor was the treaty allowed to remain limited to France and England, for forthwith after its conclusion both France and England entered into similar treaties with other nations. And inasmuch as under existing treaties other nations were bound to give to England as good treatment as they gave to the most favoured nations, the restrictions theretofore in existence in countries not originally parties to the French treaty were everywhere greatly reduced, and thereby its benefits extended rapidly over the greater part of Europe."—L. Levi, *Statistical Results of the Recent Treaties of Commerce* (*Journal of the Statistical Soc., v.* 40, 1877), *p.* 3.

(Germany): A. D. 1853-1892.—Progress towards Free Trade arrested by Prince Bismarck.—Protection measures of 1878-1887.—"Up to the revolutionary period of 1848–50, the policy of the German Zollverein or Custom's Union was a pronounced protectionism. The general liberalization, so to speak, of political life in Western Europe through the events of the years mentioned and the larger sympathy they engendered between nations produced, however, a strong movement in Germany and German-Austria in favor of greater freedom of commercial exchange between these two countries. It resulted in the conclusion, for the term of twelve years, of the treaty of 1853 between the Zollverein and Austria, as the first of the international compacts for the promotion of commercial intercourse that formed so prominent a feature of European history during the following twenty years. The treaty was a first, but long step towards free exchange, providing, as it did, for uniform duties on imports from other countries, for a considerable free list and for largely reduced duties between the contracting countries. It also contained stipulations for its renewal on the basis of entire free trade. . . . A very influential association was formed, with free trade as the avowed ulterior object. Its leaders, who were also the champions of political liberalism, represented intellects of the highest order. They included the well-known economists Prince Smith, Mittermaier, Rau, Faucher, Michaelis, Wirth, Schulze and Braun. An 'Economic Congress' was held annually, the proceedings of which attracted the greatest attention, and exercised a growing influence upon the policy of the governments composing the Zollverein. . . . The beneficial results of the treaty of 1853 were so obvious and instantaneous that the Zollverein and Austria would have no doubt sought to bring about improved commercial relations with other nations by the same means, but for the disturbance of the peace of Europe by the Crimean war, and the conflict of 1859 between France, Italy and Austria. The bitter feelings, caused by the latter war against the two first named countries wherever the German tongue was spoken, rendered the negotiation of commercial treaties with them out of the question for a time. The great achievement of Richard Cobden and Michel Chevalier, the famous treaty of 1860 between Great Britain and France, changed this reluctance at once into eagerness to secure the same advantages that those two countries had insured to each other. The enlightened and far-seeing despot occupying the throne of France, being once won over to the cause of free exchange by Cobden's ardor and persistence and clear and convincing arguments, against the views of the majority of his ministers and with probably 90 per cent. of his subjects strongly opposed to the abandonment of protectionism, determined, with the zeal of a new convert, to make the most of his new departure. He was very willing, therefore, to meet the advances of the Zollverein, so that in the spring of 1862, after a whole year's negotiation, a formal treaty was consummated between it and the French Empire. It was a very broad measure. . . . It comprised a copyright and trade-mark convention, provisions for liberal modifications of the respective navigation laws and a commercial treaty proper. The latter provided for the free admission of raw materials, for the abolition of transit and export duties and for equalizing import duties as nearly as possible, and also contained a 'most favored nation' clause. . . . In pursuance of the terms of the treaty of 1853 with Austria, negotiations had been commenced early in the sixties with reference to its renewal upon the basis of the removal of all custom-barriers between the two countries. Austria was naturally against the conclusion of a treaty between the Zollverein and France with herself left out, and opposed its consummation with all the means at her command. . . . After long negotiations, accompanied by much excitement in Germany, a compromise was reached in 1864, under which the Zollverein was renewed for twelve years, that is till 1877, and the French treaty ratified on condition that a new treaty should be made with Austria. This was done in 1865, but the new convention did not provide for the complete commercial union, contemplated under that of 1853. It was only a compact between two independent nations, but on more liberal lines than the old treaty, and certainly constituting a yet nearer approach to free trade. . . . In other directions the Zollverein lost no time in following the example of Napoleon by entering successively in 1865 and 1866 into commercial treaties with Belgium, Italy, Great Britain and Switzerland, which were simple conventions, by which the contracting parties granted to each other the position of the most favored nation, or formal tariff regulating treaties after the model of that between the Zollverein and France. These additional treaties were no more than the latter the work of Bismarck. . . . The general upheaval in Germany arising from the war between Prussia and Austria and her North and South-German Allies, while temporarily delaying the farther progress of tariff reform, subsequently accelerated its forward march. . . . A special treaty for the reform of the constitution, so to

speak, of the Zollverein was concluded in July, 1867, between the North-German Federation, the new political constellation Prussia had formed out of all Germany north of the Main, after destroying the old Diet, and Bavaria, Wuertemberg, Baden and Hesse, under the provisions of which the tariff and revenue policy of all Germany was to be managed by the 'Zollparlament,' consisting of an upper house, made up of representatives of the governments, and of a lower house of representatives of the people elected by universal suffrage on a population basis. Thus tariff reform was actually the chain that bound up, as it were, the material interests of all Germans outside of Austria for the first time, as those of one nation. Negotiations for a new commercial treaty with the dual monarchy of Austria-Hungary — into which Austria had changed in consequence of the events of 1866 — commenced immediately after the restoration of peace, and were brought to a satisfactory conclusion in March, 1868. The treaty was to run nine years, and provided for still lower duties than under the old treaty, the principal reductions being on all agricultural products, wines and iron. . . . The Franco-German war put an end to the treaty of 1862 between France and the Zollverein. As a substitute for the commercial part of it, article II of the treaty of peace of 1871 provided simply that France and Germany should be bound for an indefinite period to allow each other the most favorable tariff rates either of them had granted or might grant to Great Britain, Belgium, Holland, Switzerland, Austria-Hungary and Russia. . . . A large majority of the members of the first Reichstag [under the newly created Empire] favored further legislation in the direction of free trade, and the work of tariff reform was vigorously taken in hand, as soon as the constitution and the essential organic laws of the Empire had been framed. . . . In the session of 1873 the National Liberals brought in a motion asking the Government to present measures for the abolition of all duties on raw and manufactured iron, salt and other articles. The Government responded very readily. . . . Prince Bismarck was no less pronounced for a strict revenue tariff than any of the other government speakers. Up to the end of 1875, there was not the slightest indication of a change of views on his part upon this general subject. . . . The climax of the free trade movement in Germany can be said to have been reached about the time last stated. But a few months later, suspicious signs of a new inspiration on the part of the Prince became manifest. Rumors of dissensions between him and Minister Delbrück began to circulate, and gradually gained strength. In May, 1876, all Germany was startled by the announcement that the latter and his principal co-workers had resigned. Soon it was known that their retirement was due to a disagreement with the Prince over tariff reform matters. A crisis had evidently set in that was a great puzzle at first to everybody. Gradually it became clear that the cause of it was really a sudden abandonment of the past policy by the Prince. The new course, upon which the mighty helmsman was starting the ship of state, was signalized in various ways, but the full extent of his change of front was disclosed only in a communication addressed by him to the Federal Council, under date of December 15, 1878. It was a most extraordinary document. It condemned boldly all that had been done by the government under his own eyes and with his full consent in relation to tariff reform ever since the Franco-German treaty of 1862. . . . As the principal reason for the new departure, he assigned the necessity of reforming the public finances in order to increase the revenues of the Government. The will of the Chancellor had become the law for the federal council, and, accordingly, the tariff-committee began the work of devising a general protective tariff in hot haste. It was submitted to the Reichstag by the Prince in May, 1879. . . . Thus Germany was started on the downward plain of protectionism, on which it continued for twelve years. Beyond all question, the Chancellor was solely responsible for it. . . . The tariff bill of 1879 met with vigorous opposition under the lead of ex-Minister Delbrück, but was passed by the large majority of 217 to 117 — showing the readiness with which the 'bon plaisir' of the master had made converts to his new faith. It was a sweeping measure, establishing large duties on cereals, iron, lumber and petroleum, increasing existing duties on textile goods, coffee, wines, rice, tea, and a great number of other minor articles and also on cattle. The protectionist current came to a temporary stop from 1880-'83, inasmuch as in the new Reichstag, elected in 1881, the protection and anti-protection parties were so evenly balanced that the Government failed to carry its proposals for still higher duties. The elections of 1884, in which the Government brought every influence to bear against the opposition, resulted, however, in the return of a protectionist majority. Accordingly, there followed in 1885 a new screwing up of duties, tripling those on grain, doubling those on lumber, and raising most others. In 1887 the duties on grain were even again increased. But now the insatiateness of protection and especially the duties put on the necessaries of life produced a strong reaction, as evidenced by the largely increased membership of the opposition parties in the present Reichstag. . . . The Imperial Government, shortly after the retirement of Prince Bismarck had untied its hands, entered upon negotiations with Austria-Hungary, Italy, Switzerland and Belgium, which resulted in . . . reciprocity treaties."— H. Villard, *German Tariff Policy* (*Yale Rev., May*, 1892).

Also in: W. H. Dawson, *Bismarck and State Socialism.*

(United States and Canada): A. D. 1854-1866.— The Reciprocity Treaty.— The Treaty commonly known in America as the Canadian Reciprocity Treaty of 1854, between the governments of Great Britain and the United States, was concluded on the 5th of June, 1854, and ratifications were exchanged on the 9th of September following. The negotiators were the Earl of Elgin and Kincardine, on the part of the British Government, and William L. Marcy, Secretary of State of the United States, acting for the latter. By the first article of the treaty it was agreed that, "in addition to the liberty secured to the United States fishermen by the . . . convention of October 20, 1818, of taking, curing, and drying fish on certain coasts of the British North American Colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic

Majesty, the liberty to take fish of every kind, except shell-fish, on the sea-coasts and shores, and in the bays, harbors, and creeks of Canada, New Brunswick, Nova Scotia, Prince Edward's Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the coasts and shores of those colonies and the islands thereof, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish; provided that, in so doing, they do not interfere with the rights of private property, or with British fishermen, in the peaceable use of any part of the said coast in their occupancy for the same purpose. It is understood that the above-mentioned liberty applies solely to the sea-fishery, and that the salmon and shad fisheries, and all fisheries in rivers and the mouths of rivers, are hereby reserved exclusively for British fishermen." The same article provided for the appointment of commissioners and an arbitrator or umpire to settle any disputes that might arise "as to the places to which the reservation of exclusive right to British fishermen contained in this article, and that of fishermen of the United States contained in the next succeeding article, apply." By the second article of the treaty British subjects received privileges on the eastern sea-coasts and shores of the United States north of the 36th parallel of north latitude, identical with those given by the first article to citizens of the United States on the coasts and shores mentioned above. Article 3 was as follows: "It is agreed that the articles enumerated in the schedule hereunto annexed, being the growth and produce of the aforesaid British colonies or of the United States, shall be admitted into each country respectively free of duty: Schedule: Grain, flour, and breadstuffs, of all kinds. Animals of all kinds. Fresh, smoked, and salted meats. Cotton-wool, seeds, and vegetables. Undried fruits, dried fruits. Fish of all kinds. Products of fish, and of all other creatures living in the water. Poultry, eggs. Hides, furs, skins, or tails, undressed. Stone or marble, in its crude or unwrought state. Slate. Butter, cheese, tallow. Lard, horns, manures. Ores of metals, of all kinds. Coal. Pitch, tar, turpentine, ashes. Timber and lumber of all kinds, round, hewed, and sawed, unmanufactured in whole or in part. Firewood. Plants, shrubs, and trees. Pelts, wool. Fish-oil. Rice, broom-corn, and bark. Gypsum, ground or unground. Hewn, or wrought, or unwrought burr or grindstones. Dye-stuffs. Flax, hemp, and tow, unmanufactured. Unmanufactured tobacco. Rags." Article 4 secured to the citizens and inhabitants of the United States the right to navigate the River St. Lawrence and the canals in Canada between the ocean and the great lakes, subject to the same tolls and charges that might be exacted from Her Majesty's subjects, but the British Government retained the right to suspend this privilege, on due notice given, in which case the Government of the United States might suspend the operations of Article 3. Reciprocally, British subjects were given the right to navigate Lake Michigan, and the Government of the United States engaged itself to urge the State governments to open the several State canals to British subjects on terms of equality. It was further agreed that no export or other duty should be levied on lumber or timber floated down the river St. John to the sea, "when the same is shipped to the United States from the province of New Brunswick." Article 5 provided that the treaty should take effect whenever the necessary laws were passed by the Imperial Parliament, the Provincial Parliaments, and the Congress of the United States, and that it should "remain in force for ten years from the date at which it may come into operation, and further until the expiration of twelve months after either of the high contracting parties shall give notice to the other of its wish to terminate the same." Article 6 extended the provisions of the treaty to the island of Newfoundland, so far as applicable, provided the Imperial Parliament, the Parliament of Newfoundland and the Congress of the United States should embrace the island in their laws for carrying the treaty into effect; but not otherwise. — *Treaties and Conventions between the United States and other Powers, ed. of* 1889, *pp.* 448–452. —The Treaty was abrogated in 1866, the United States having given the required notice in 1865. —F. E. Haynes, *The Reciprocity Treaty with Canada of* 1854 (*Am. Economic Assn. Pubs., v.* 7, *no.* 6).

(United States): A. D. 1861-1864. — The Morrill Tariff and the War Tariffs.—"In 1861 the Morrill tariff act began a change toward a higher range of duties and a stronger application of protection. The Morrill act is often spoken of as if it were the basis of the present protective system. But this is by no means the case. The tariff act of 1861 was passed by the House of Representatives in the session of 1859–60, the session preceding the election of President Lincoln. It was passed, undoubtedly, with the intention of attracting to the Republican party, at the approaching Presidential election, votes in Pennsylvania and other States that had protectionist leanings. In the Senate the tariff bill was not taken up in the same session in which it was passed in the House. Its consideration was postponed, and it was not until the next session — that of 1860–61 — that it received the assent of the Senate and became law. It is clear that the Morrill tariff was carried in the House before any serious expectation of war was entertained; and it was accepted by the Senate in the session of 1861 without material change. It therefore forms no part of the financial legislation of the war, which gave rise in time to a series of measures that entirely superseded the Morrill tariff. Indeed, Mr. Morrill and the other supporters of the act of 1861 declared that their intention was simply to restore the rates of 1846. The important change which they proposed to make from the provisions of the tariff of 1846 was to substitute specific for ad-valorem duties. . . . The specific duties . . . established were in many cases considerably above the ad-valorem duties of 1846. The most important direct changes made by the act of 1861 were in the increased duties on iron and on wool, by which it was hoped to attach to the Republican party Pennsylvania and some of the Western States. Most of the manufacturing States at this time still stood aloof from the movement toward higher rates. . . . Mr. Rice, of Massachusetts, said in 1860: 'The manufacturer asks no additional protection. He has learned, among other things, that the greatest evil, next to a ruinous competition from foreign sources, is an excessive protec-

tion, which stimulates a like ruinous and irresponsible competition at home' (Congress. Globe, 1859–60, p. 1867). Mr. Sherman said: . . . 'The manufacturers have asked over and over again to be let alone. The tariff of 1857 is the manufacturers' bill; but the present bill is more beneficial to the agricultural interest than the tariff of 1857.' (Ibid., p. 2053. C. F. Hunter's speech, Ibid., p. 3010.) In later years Mr. Morrill himself said that the tariff of 1861 'was not asked for, and but coldly welcomed, by manufacturers, who always and justly fear instability.' (Congr. Globe, 1869–70, p. 3295.) . . . Hardly had the Morrill tariff been passed when Fort Sumter was fired on. The Civil War began. The need of additional revenue for carrying on the great struggle was immediately felt; and as early as the extra session of the summer of 1861, additional customs duties were imposed. In the next regular session, in December, 1861, a still further increase of duties was made. From that time till 1865 no session, indeed hardly a month of any session, passed in which some increase of duties on imports was not made. . . . The great acts of 1862 and 1864 are typical of the whole course of the war measures; and the latter is of particular importance, because it became the foundation of the existing tariff system. . . . The three revenue acts of June 30, 1864, practically form one measure, and that probably the greatest measure of taxation which the world has seen. The first of the acts provided for an enormous extension of the internal-tax system; the second for a corresponding increase of the duties on imports; the third authorized a loan of $400,000,000. . . . Like the tariff act of 1862, that of 1864 was introduced, explained, amended, and passed under the management of Mr. Morrill, who was chairman of the Committee on Ways and Means. That gentleman again stated, as he had done in 1862, that the passage of the tariff act was rendered necessary in order to put domestic producers in the same situation, so far as foreign competition was concerned, as if the internal taxes had not been raised. This was one great object of the new tariff. . . . But it explains only in part the measure which in fact was proposed and passed. The tariff of 1864 was a characteristic result of that veritable furor of taxation which had become fixed in the minds of the men who were then managing the national finances. Mr. Morrill, and those who with him made our revenue laws, seem to have had but one principle: to tax every possible article indiscriminately, and to tax it at the highest rates that any one had the courage to suggest. They carried this method out to its fullest extent in the tariff act of 1864, as well as in the tax act of that year. At the same time these statesmen were protectionists. . . . Every domestic producer who came before Congress got what he wanted in the way of duties. Protection ran riot; and this, moreover, not merely for the time being. The whole tone of the public mind toward the question of import duties became distorted. . . . The average rate on dutiable commodities, which had been 37.2 per cent. under the act of 1862, became 47.06 per cent. under that of 1864. . . . In regard to the duties as they stood before 1883, it is literally true, in regard to almost all protected articles, that the tariff act of 1864 remained in force for twenty years without reductions."—F. W. Taussig, *Tariff History of the U. S., pp.* 158–169, *with foot-note.*—Under the Morrill Tariff, which went into effect April 1, 1861, the imposts which had averaged about 19 per cent. on dutiable articles were raised to 36 per cent.—J. G. Blaine, *Twenty Years of Congress, v.* 1, *p.* 400.

(Australia): A. D. 1862-1892.—Contrasted policy of Victoria and New South Wales.—Both New South Wales and Victoria "are young countries, and are inhabited by men of the same race, speech, and training: capital and labour oscillate freely between them: both use substantially the same methods and forms of government: while against the larger territory of New South Wales may be set the superior climate and easier development of its southern neighbour. Whatever may be the balance of the natural advantages, whether of climate or population, is on the side of Victoria, whose compact, fertile, and well watered territory gained for it, on its first discovery, the well-deserved title of Australia Felix. The striking and ultimate point of difference between the two countries is their fiscal policy. Since 1866 Victoria has lived under a system of gradually increasing Protection, while the policy of New South Wales has been, in the main, one of Free Trade. According to all Protectionist theory Victoria should be prosperous and New South Wales distressed; there should be variety and growth in the one country, stagnation in the other. At least the progress of Victoria ought to have been more rapid than that of New South Wales, because she has added to the natural advantages which she already enjoyed, the artificial benefits which are claimed for a Protective tariff. If, in fact, neither of these conclusions is correct, and, while both countries have been phenomenally prosperous, New South Wales has prospered the most, one of two conclusions is inevitable — namely, either that certain special influences have caused the more rapid progress of New South Wales which were not felt in Victoria, or that Protection has retarded instead of assisted the development of Victoria's natural superiority. Writers of all schools admit that activity in certain departments of national life is a fair indication of prosperity and progress. It is, for instance, generally allowed that an increase in population, a development of agricultural and manufacturing industry, a growth of foreign commerce, an increase in shipping, or an improvement in the public revenue, are all signs of health and well-being; and that a concurrence of such symptoms over a lengthened period indicates an increase in material wealth. Accepting these tests of progress, our comparison proceeds thus: first, we examine the position of the two Colonies as regards population, foreign commerce, shipping, agriculture, manufactures, and revenue, at the time when both of them adhered to Free Trade; from which we find that, according to all these indications of prosperity, Victoria was then very much the better off: In 1866 she outnumbered New South Wales in population by 200,000 souls: her foreign commerce was larger by £8,300,000: she had a greater area of land under cultivation: her manufactures were well established, while those of New South Wales were few and insignificant: she was ahead in shipping, and her revenue was greater by one-third. Passing next to the years which follow 1866, we observe that New South Wales gradually bettered her position in every province of national activity, and

that, as the fetters of Protection became tighter, Victoria receded in the race. She gave way first in the department of foreign commerce, next in population, shipping, and revenue, until, in 1887, she maintained her old superiority in agriculture alone. From this accumulation of facts—and not from any one of them we infer that the rate of progress in New South Wales under Free Trade has been greater than that of Victoria under Protection."—B. R. Wise, *Industrial Freedom, app.* 3.

Europe): A. D. 1871-1892.—Protectionist reaction on the Continent.—High Tariff in France.—"The Franco-German War (1870-1) and the overthrow of Napoleon III. at once arrested the free-trade policy, which had little support in the national mind, and was hardly understood outside the small circle of French economists. The need of fresh revenue was imperative, and M. Thiers, the most prominent of French statesmen, was notoriously protectionist in his leanings. Pure revenue duties on colonial and Eastern commodities were first tried: the sugar duty was increased 80%, that on coffee was trebled; tea, cocoa, wines and spirits, were all subjected to greatly increased charges. As the yield thus obtained did not suffice, proposals for the taxation of raw materials were brought forward but rejected by the legislature in 1871, when M. Thiers tendered his resignation. To avoid this result the measure was passed, not however to come into operation until compensating productive duties had been placed on imported manufactures. The existing commercial treaties were a further obstacle to changes in policy, and accordingly negotiations were opened with England and Belgium, in order that the new duties might be applied to their products. As was justifiable under the circumstances, the former country required that if imported raw products were to be taxed, the like articles produced in France should pay an equivalent tax, and therefore, as the shortest way of escape, the French Government gave notice for the termination of the treaties (in the technical language of international law 'denounced' them), and new conventions were agreed on; but as this arrangement was just as unsatisfactory in the opinion of the French Chambers, the old treaties were in 1873 restored to force until 1877, and thus the larger part of the raw materials escaped the new taxation. The protectionist tendency was, too, manifested in the departure from the open system introduced in 1866 in respect to shipping. A law of 1872 imposed differential duties on goods imported in foreign vessels. . . . The advance of the sentiment in favour of a return to the restrictive system was even more decidedly indicated in 1881. Bounties were then granted for the encouragement of French shipping, and extra taxes imposed on indirect imports of non-European and some European goods. In 1889 the carrying trade between France and Algiers was reserved for native ships. The revision of the general tariff was a more serious task, undertaken with a view to influencing the new treaties that the termination of the old engagements made necessary. The tariff of 1881 (to come into force in 1882) made several increases and substituted many specific for ad valorem duties. Raw materials escaped taxation; half-manufactured articles were placed under moderate duties. The minimal corn duties were diminished by a fraction, but the duties on live stock and fresh meat were considerably increased. . . . A new 'conventional tariff' speedily followed in a series of fresh treaties with European countries. . . . The duties on whole or partially-manufactured goods remained substantially unchanged by the new treaties, which do not, in fact, vary so much from the general tariff as was previously the case. The number of articles included in the conventions had been reduced, and all countries outside Europe came under the general code. The reaction against the liberal policy of 1860 was thus as yet very slight, and did not seriously affect manufactures. The agricultural depression was the primary cause of the legislation of 1885, which placed a duty of 3 francs per quintal on wheat, 7 francs on flour, 2 francs on rye and barley, and one franc on oats, with additional duties on indirect importation. Cattle, sheep, and pigs came under increases of from 50% to 100%. . . . Not satisfied with their partial success, the advocates of high duties have made further efforts. Maize, hitherto free, as being chiefly used by farmers for feeding purposes, is now liable to duty, and the tariff proposed in the present year (1891) raises the rates on most articles from an average of 10% to 15% to one of 30% and 40%. . . . Germany did not quite as speedily come under the influence of the economic reaction as France. . . . Italian commercial policy also altered for the worse. From the formation of the kingdom till 1875, as the various commercial treaties and the general tariff of 1861 show, it was liberal and tending towards freedom. About the latter date the forces that we have indicated above as operating generally throughout Europe, commenced to affect Italy. The public expenditure had largely increased, and additional revenue was urgently required. Agriculture was so depressed that, though the country is pre-eminently agricultural, alarm was excited by the supposed danger of foreign competition. The result was that on the general revision of duties in 1877 much higher rates were imposed on the principal imports. . . . Depression both in agriculture and elaborative industries continued and strengthened the protectionist party, who succeeded in securing the abandonment of all the commercial treaties, and the enactment of a new tariff in 1887. . . . The first effect of the new system of high taxation with no conventional privileges was to lead to a war of tariffs between France and Italy. . . . Austria may be added to the list of countries in which the protectionist reaction has been effectively shown. . . . In Russia the revival (or perhaps it would be more correct to say continued existence) of protection is decisively marked. . . . Spain and Portugal had long been strongholds of protectionist ideas. . . . Holland and Belgium have as yet [1891] adhered to the system of moderate duties."—C. F. Bastable, *The Commerce of Nations, ch.* 9.—A new tariff system was elaborated by the French Chambers, with infinite labor and discussion, during the year 1891, and adopted early in the following year, being known as the "Loi du 11 Janvier, 1892." This tariff makes a great advance in duties on most imports, with a concession of lower rates to nations according reciprocal favors to French productions. Raw materials in general are admitted free of duties. The commercial treaties of France are undergoing modification.

[illegible]

the doctrine which was hateful to their fathers as an economic heresy. The majority of the Democrats in the House, however, made strenuous efforts to accomplish something in the way of reducing duties most complained of. Their first undertaking was led by Mr. Morrison of Illinois, who introduced a bill which "proposed an average reduction of 20 per cent., but with so many exceptions that it was estimated the average reduction on dutiable articles would be about 17 per cent. The rates under the Morrill Act of 1861 were to form the minimum limit. An extensive addition to the free list was proposed, including the following articles: ores of iron, copper, lead, and nickel, coal, lumber, wood, hay, bristles, lime, sponges, indigo, coal tar and dyewoods." In the Committee of Ways and Means the bill underwent considerable changes, the articles in the free list being reduced to salt, coal, lumber and wood. It was reported to the House March 11, and remained under debate until May 6, when it was killed by a motion to strike out the enacting clause, on which 118 Republicans and 41 Democrats voted aye, against 4 Republicans and 151 Democrats voting nay. The 4 Republicans supporting the bill were all from Minnesota; of the 41 Democrats opposing it 12 were from Pennsylvania, 10 from Ohio, 6 from New York, 4 from California and 3 from New Jersey. "The Morrison 'horizontal bill' having been thus killed, Mr. Hewett, a New York Democrat, and a member of the Ways and Means Committee, on May 12 introduced a new tariff bill, providing for a reduction of 10 to 20 per cent. on a considerable number of articles and placing several others on the free list." The bill was reported favorably to the House, but action upon it was not reached before the adjournment. During the same session, a bill to restore the duties of 1867 on raw wool was defeated in the House; an amendment to the shipping bill, permitting a free importation of iron and steel steamships for employment in the foreign trade, passed the House and was defeated in the Senate; and a bill reducing the duty on works of art from 20 to 10 per cent. was defeated in the House. In the next Congress, the Forty-ninth, Mr. Morrison led a new undertaking to diminish the protective duties which were producing an enormous surplus of revenue. The bill which he introduced (February 15, 1886) received radical changes in the Ways and Means Committee, "inasmuch as it was clearly seen that the opposition from the metal and coal interests was sufficiently strong to destroy all chance of consideration in the House. Accordingly, it was found preferable to make the duties on wool and woolens the special point for assault." But the bill modified on this new line,—lowering duties on woolens to 35 per cent. ad valorem, and placing wool in the free list, with lumber, wood, fish, salt, flax, hemp and jute,—was refused consideration by a vote of 157 to 140 in the House, on the 17th of June. Again there were 35 members of his own party arrayed against Mr. Morrison. At the second session of the same Congress, December 18, 1886, Mr. Morrison repeated his attempt with no better success.—O. H. Perry, *Proposed Tariff Legislation since* 1883 (*Quarterly Journal of Economics, October*, 1887).—The assembling of the 50th Congress, on the 6th of December, 1887, was signalized by a message from President Cleveland which produced an extraordinary effect, decisively lifting the tariff question into precedence over all other issues in national politics, and compelling the Democratic Party to array its lines distinctly and unequivocally against the upholders of "protection" as an economic policy. He emphasized the "paramount importance of the subject" impressively by passing by every other matter of public concern, and devoting his message exclusively to a consideration of the "'state of the Union' as shown in the present condition of our Treasury and our general fiscal situation." The condition of the Treasury to which the President called attention was one of unexampled plethora. "On the 30th day of June, 1885, the excess of revenues over public expenditures, after complying with the annual requirement of the Sinking-Fund Act, was $17,859,735.84; during the year ended June 30, 1886, such excess amounted to $49,405,545.20; and during the year ended June 30, 1887, it reached the sum of $55,567,849.54." "Our scheme of taxation," said the President, "by means of which this needless surplus is taken from the people and put into the public treasury, consists of a tariff or duty levied upon importations from abroad, and internal-revenue taxes levied upon the consumption of tobacco and spirituous and malt liquors. It must be conceded that none of the things subjected to internal-revenue taxation are, strictly speaking, necessaries; there appears to be no just complaint of this taxation by the consumers of these articles, and there seems to be nothing so well able to bear the burden without hardship to any portion of the people. But our present tariff laws, the vicious, inequitable, and illogical source of unnecessary taxation, ought to be at once revised and amended. These laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty, by precisely the sum paid for such duties. Thus the amount of the duty measures the tax paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty. So it happens that while comparatively a few use the imported articles, millions of our people, who never use and never saw any of the foreign products, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles. Those who buy imports pay the duty charged thereon into the public treasury, but the majority of our citizens, who buy domestic articles of the same class, pay a sum at least approximately equal to this duty to the home manufacturer. . . . The difficulty attending a wise and fair revision of our tariff-laws is not underestimated. It will require on the part of Congress great labor and care, and especially a broad and national contemplation of the subject, and a patriotic disregard of such local and selfish claims as are unreasonable and reckless of the welfare of the entire country. Under our present laws more than 4,000 articles are subject to duty. Many of these do not in

any way compete with our own manufactures, and many are hardly worth attention as subjects of revenue. A considerable reduction can be made in the aggregate by adding them to the free list. The taxation of luxuries presents no features of hardship; but the necessaries of life used and consumed by all the people, the duty upon which adds to the cost of living in every home, should be greatly cheapened. The radical reduction of the duties imposed upon raw material used in manufactures, or its free importation, is of course an important factor in any effort to reduce the price of these necessaries. . . . It is not apparent how such a change can have any injurious effect upon our manufacturers. On the contrary, it would appear to give them a better chance in foreign markets with the manufacturers of other countries, who cheapen their wares by free material. Thus our people might have an opportunity of extending their sales beyond the limits of home consumption — saving them from the depression, interruption in business, and loss caused by a glutted domestic market, and affording their employés more certain and steady labor, with its resulting quiet and contentment. The question thus imperatively presented for solution should be approached in a spirit higher than partisanship. . . . But the obligation to declared party policy and principle is not wanting to urge prompt and effective action. Both of the great political parties now represented in the Government have, by repeated and authoritative declarations, condemned the condition of our laws which permits the collection from the people of unnecessary revenue, and have, in the most solemn manner, promised its correction. . . . Our progress toward a wise conclusion will not be improved by dwelling upon the theories of protection and free trade. This savors too much of bandying epithets. It is a condition which confronts us — not a theory. Relief from this condition may involve a slight reduction of the advantages which we award our home productions, but the entire withdrawal of such advantages should not be contemplated. The question of free trade is absolutely irrelevant."—The President's emphatic utterance rallied his party and inspired a more united effort in the House to modify and simplify the tariff. Under the chairmanship of Mr. Mills, of Texas, a bill was framed by the Committee of Ways and Means and reported to the House on the 2d of April, 1888. "We have gone as far as we could," said the Committee in reporting the bill, "and done what we could, in the present condition of things, to place our manufactures upon a firm and unshaken foundation, where they would have advantages over all the manufacturers of the world. Our manufacturers, having the advantage of all others in the intelligence, skill, and productive capacity of their labor, need only to be placed on the same footing with their rivals in having their materials at the same cost in the open markets of the world. In starting on this policy, we have transferred many articles from the dutiable to the free list. The revenues now received on these articles amount to $22,189,595.48. Three-fourths of this amount is collected on articles that enter into manufactures, of which wool and tin-plates are the most important. . . . The repeal of all duties on wool enables us to reduce the duties on the manufactures of wool $12,332,211.65. The largest reduction we have made is in the woolen schedule, and this reduction was only made possible by placing wool on the free list. There is no greater reason for a duty on wool than there is for a duty on any other raw material. A duty on wool makes it necessary to impose a higher duty on the goods made from wool, and the consumer has to pay a double tax. If we leave wool untaxed the consumer has to pay a tax only on the manufactured goods. . . . In the woolen schedule we have substituted ad valorem for specific duties. The specific duty is the favorite of those who are to be benefited by high rates, who are protected against competition, and protected in combinations against the consumer of their products. There is a persistent pressure by manufacturers for the specific duty, because it conceals from the people the amount of taxes they are compelled to pay to the manufacturer. The specific duty always discriminates in favor of the costly article and against the cheaper one. . . . This discrimination is peculiarly oppressive in woolen and cotton goods, which are necessaries of life to all classes of people." The ad valorem duty on woolen goods proposed by the committee in accordance with these views, ranged from 30 to 45 per cent., existing rates being reckoned as equivalent to about from 40 to 90 per cent. ad valorem. Duties on cottons were fixed at 35 to 40 per cent. On steel rails the bill proposed a reduction from $17 per ton to $11. It lowered the duty on pig-iron to $6 per ton. It diminished the tariff on common earthenware from 60 to 35 per cent.; on china and decorated earthenware from 60 to 45 per cent.; on window-glass from 93 and 106 to 62 and 68 per cent. It put tin plates on the free list, along with hemp, flax, lumber, timber, salt, and other materials of manufacture and articles in common use. These were the more important modifications contemplated in what became known as "the Mills Bill." After vigorous debate, it was passed by the Democrats of the House with a nearness to unanimity which showed a remarkable change in the sentiment of their party on the subject. Only four Democratic representatives were found voting in opposition to the measure. In the Senate, where the Republicans were in the majority, the measure was wrecked, as a matter of course. The protectionists of that body substituted a bill which revised the tariff in the contrary direction, generally raising duties instead of lowering them. Thus the issue was made in the elections of 1888.

(United States): A. D. 1890.—The McKinley Act.—"In the campaign of 1888 the tariff question was the issue squarely presented. . . . The victory of the Republicans . . . and the election of President Harrison were the results. . . . The election was won by a narrow margin, and was affected by certain factors which stood apart from the main issue. The independent voters had been disappointed with some phases of President Cleveland's administration of the civil service, and many who had voted for him in 1884 did not do so in 1888. . . . On the whole, however, the Republicans held their own, and even made gains, throughout the country, on the tariff issue; and they might fairly consider the result a popular verdict in favor of the system of protection. But their opposition to the policy of lower duties, emphasized by President Cleveland, had led them not only to champion the existing system, but to advocate its

further extension, by an increase of duties in various directions. . . . Accordingly when the Congress then elected met for the session of 1889–90, the Republican majority in the House proceeded to pass a measure which finally became the tariff act of 1890. This measure may fairly be said to be the direct result of Mr. Cleveland's tariff message of 1887. The Republicans, in resisting the doctrine of that message, were led by logical necessity to the opposite doctrine of higher duties. . . . Notwithstanding grave misgivings on the part of some of their leaders, especially those from the northwest, the act known popularly as the McKinley bill was pushed through."—F. W. Taussig, *Tariff History of the U. S., ch.* 5.—The bill was reported to the House of Representatives by the Chairman of its Committee on Ways and Means, Mr. McKinley, on the 16th of April, 1890. "We have not been so much concerned," said the majority of the Committee in their report, "about the prices of the articles we consume as we have been to encourage a system of home production which shall give fair remuneration to domestic producers and fair wages to American workmen, and by increased production and home competition insure fair prices to consumers. . . . The aim has been to impose duties upon such foreign products as compete with our own, whether of the soil or the shop, and to enlarge the free list wherever this can be done without injury to any American industry, or wherever an existing home industry can be helped without detriment to another industry which is equally worthy of the protecting care of the Government. . . . We have recommended no duty above the point of difference between the normal cost of production here, including labor, and the cost of like production in the countries which seek our markets, nor have we hesitated to give this quantum of duty even though it involved an increase over present rates and showed an advance of percentages and ad valorem equivalents." On the changes proposed to be made in the rates of duty on wool and on the manufactures of wool—the subject of most debate in the whole measure—the majority reported as follows: "By the census of 1880, in every county in the United States except 34, sheep were raised. In 1883 the number of sheep in the United States was over 50,000,000, and the number of persons owning flocks was in excess of a million. This large number of flock-masters was, to a considerable extent, withdrawn from the business of raising grain and other farm products, to which they must return if wool-growing cannot be profitably pursued. The enormous growth of this industry was stimulated by the wool tariff of 1867, and was in a prosperous condition prior to the act of 1883. Since then the industry has diminished in alarming proportions, and the business has neither been satisfactory nor profitable. . . . By the proposed bill the duties on first and second class wools are made at 11 and 12 cents a pound, as against 10 and 12 under existing law. On third-class wool, costing 12 cents or less, the duty is raised from 2½ cents a pound to 3½ cents, and upon wool of the third class, costing above 12 cents, the duty recommended is an advance from 5 to 8 cents per pound. . . . There seems to be no doubt that with the protection afforded by the increased duties recommended in the bill the farmers of the United States will be able at an early day to supply substantially all of the home demand, and the great benefit such production will be to the agricultural interests of the country cannot be estimated. The production of 600,000,000 pounds of wool would require about 100,000,000 sheep, or an addition of more than 100 per cent to the present number. . . . The increase in the duty on clothing wool and substitutes for wool to protect the wool growers of this country, and the well-understood fact that the tariff of 1883, and the construction given to the worsted clause, reduced the duties on many grades of woollen goods to a point that invited increasing importations, to the serious injury of our woollen manufacturers and wool growers, necessitate raising the duties on woollen yarn, cloth and dress goods to a point which will insure the holding of our home market for these manufactures to a much greater extent than is now possible. The necessity of this increase is apparent in view of the fact already stated that during the last fiscal year there were imports of manufactures of wool of the foreign value of $52,681,482, as shown by the undervalued invoices, and the real value in our market of nearly $90,000,000—fully one-fourth of our entire home consumption—equivalent to an import of at least 160,000,000 pounds of wool in the form of manufactured goods. In revising the woollen-goods schedule so as to afford adequate protection to our woollen manufacturers and wool growers we have continued the system of compound duties which have proved to be so essential in any tariff which protects wool, providing first for a specific compensatory pound or square yard duty, equivalent to the duty which would be paid on the wool if imported, for the benefit of the wool grower, and an ad valorem duty of from 30 to 50 per cent, according to the proportion of labor required in the manufacture of the several classes of goods, as a protection to the manufacturer against foreign competition, and 10 per cent additional upon ready made clothing for the protection of the clothing manufacturers. . . . In computing the equivalent ad valorem duty on manufactures of woollens, the combinations of both the specific duty, which is simply compensatory for the duty on the wool used, of which the wool grower receives the benefit, and the duty which protects the manufacturers, makes the average resultant rate of the woollen-goods schedule proposed 91.78 per cent."—*Report of the Committee on Ways and Means.*—"Substantially as reported from the Committee on Ways and Means, it [the McKinley Bill] passed the House, after two weeks' debate, May 21 [1890]. The vote was a strictly party one, except that two Republicans voted in the negative. June 19 the bill was reported from the Senate Committee on Finance with a very large number of amendments, mainly in the way of a lessening of rates. After debating the project during nearly the whole of August and a week in September, the Senate passed it by a strict party vote, September 10. The differences between the houses then went to a conference committee. The bill as reported by this committee, September 26, was adopted by the House and Senate on the 27th and 30th respectively and approved by the President October 1. On the final vote three Republicans in each house declined to follow their party. The law went into effect October 6. Prominent features of the new

schedules are as follows: steel rails reduced one-tenth of a cent per lb.; tin plates increased from one cent to two and two-tenths cents per lb., with the proviso that they shall be put on the free list at the end of six years if by that time the domestic product shall not have reached an aggregate equal to one-third of the importations; unmanufactured copper substantially reduced; bar, block and pig tin, hitherto on the free list, receives a duty of four cents per lb. to take effect July 1, 1893, provided that it be restored to the free list if by July 1, 1895, the mines of the United States shall not have produced in one year 5,000 tons; a bounty of one and three-fourths and two cents per lb. upon beet, sorghum, cane or maple sugar produced in the United States between 1891 and 1905; all imports of sugar free up to number 16, Dutch standard, in color and all above that one-half cent per lb. (formerly from three to three and a half cents), with one-tenth cent additional if imported from a country that pays an export bounty; a heavy increase on cigar wrappers and cigars; a general and heavy increase on agricultural products, e. g. on beans, eggs, hay, hops, vegetables and straw; a heavy increase on woolen goods, with a new classification of raw wool designed to give more protection; paintings and statuary reduced from 30 to 15 per cent. The following (among other) additions are made to the free list: beeswax, books and pamphlets printed exclusively in languages other than English, blue clay, coal tar, currants and dates, jute butts and various textile and fibrous grasses, needles, nickel ore, flower and grass seeds and crude sulphur. . . . Among the 464 points of difference between the two houses which the conference committee had to adjust, some of the more important were as follows: paintings and statuary, made free by the House and kept at the old rate by the Senate, were fixed at half the old rate; binding twine, made free by the Senate in favor of Western grain-raisers but taxed by the House to protect Eastern manufacturers, fixed at half the House rate; the limit of free sugar fixed at number 16, as voted by the House, instead of number 13, as passed by the Senate, thus including in the free list the lower grades of refined as well as all raw sugar. The question of reciprocity with American nations was injected into the tariff discussion by Secretary Blaine in June. In transmitting to Congress the recommendation of the International American Conference for improved commercial relations, the secretary dilated upon the importance of securing the markets of central and South America for our products, and suggested as a more speedy way than treaties of reciprocity an amendment to the pending tariff bill authorizing the President to open our ports to the free entry of the products of any American nation which should in turn admit free of taxation our leading agricultural and manufactured products. In July Mr. Blaine took up the idea again in a public correspondence with Senator Frye, criticizing severely the removal of the tariff on sugar, as that on coffee had been removed before, without exacting trade concessions in return. He complained that there was not a section or a line in the bill as it came from the House that would open the market for another bushel of wheat or another barrel of pork. The Senate Finance Committee acted upon the suggestion of the secretary by introducing an amendment to the bill authorizing and directing the President to suspend by proclamation the free introduction of sugar, molasses, coffee, tea and hides from any country which should impose on products of the United States exactions which in view of the free introduction of sugar etc. he should deem reciprocally unequal and unreasonable. The rates at which the President is to demand duties upon the commodities named are duly fixed. This reciprocity provision passed the Senate and the conference committee and became part of the law."—*Political Science Quarterly: Record of Events, Dec.*, 1890.

(United States): A. D. 1894.—The Wilson Act.—Protected interests and the Senate.— Two years after the embodiment of the extremest doctrines of protection in the McKinley Act, the tariff question was submitted again to the people, as the dominant issue between the Republican and Democratic parties, in the presidential and congressional elections of 1892. The verdict of 1888 was then reversed, and tariff reform carried the day. Mr. Cleveland was again elected President, with a Democratic majority in both houses of Congress apparently placed there to sustain his policy. A serious financial situation was manifesting itself in the country at the time he resumed the presidential office, produced by the operation of the silver-purchase law of 1890 (see MONEY AND BANKING: A. D. 1848–1893), and by the extravagance of congressional appropriations, depleting the treasury. It became necessary, therefore, to give attention, first, to the repeal of the mischievous silver law, which was accomplished, November 1, 1893, at a special session of Congress called by the President. That cleared the way for the more serious work of tariff-revision, which was taken up under discouraging circumstances of general depression and extensive collapse in business, throughout the country. "The Democratic members of the House committee on ways and means began during the special session the preparation of a tariff bill. The outcome of their labors was the Wilson Bill, which was laid before the whole committee and made public November 27. On the previous day the sugar schedule was given out, in order to terminate the manipulation of the stock market through false reports as to the committee's conclusions. The characteristic features of the bill, as described in the statement of Chairman Wilson which accompanied it, were as follows: First, the adoption, wherever practicable, of ad valorem instead of specific duties; second, 'the freeing from taxes of those great materials of industry that lie at the basis of production.' Specific duties were held to be objectionable, first, as concealing the true weight of taxation, and second, as bearing unjustly on consumers of commoner articles. Free raw materials were held necessary to the stimulation of industry and the extension of foreign trade. The schedules, as reported, showed in addition to a very extensive increase in the free list, reductions in rates, as compared with the McKinley Bill, on all but a small number of items. The important additions to the free list included iron ore, lumber, coal and wool. Raw sugar was left free, as in the existing law, but the rate on refined sugar was reduced from one-half to one-fourth of a cent per pound, and the bounty was repealed one-eighth per annum until extin-

guished. Some amendments were made in the administrative provisions of the tariff law, designed to soften, as the committee said, features of the McKinley Bill 'that would treat the business of importing as an outlawry, not entitled to the protection of the government.' It was estimated that the reduction of revenue effected would be about $50,000,000, and the committee set to work on an internal revenue bill to make good this deficiency. On January 8 Mr. Wilson brought up the bill in the House, and debate began under a rule calling for a vote on the 29th. During the consideration in committee a number of changes were made in the schedules, the most important being in respect to sugar, where the duty was taken off refined sugars, and the repeal of the bounty was made immediate instead of gradual. A clause was inserted, also, specifically repealing the reciprocity provision of the McKinley Act. The greatest general interest was excited, however, by the progress of the internal revenue bill, the chief feature of which was a proposition for an income tax. The bill, after formulation by the Democratic members of the ways and means committee, was brought before the full committee January 22. Besides the income tax, the measure provided for a stamp duty on playing cards, and raised the excise on distilled spirits to one dollar per gallon. As to incomes, the committee's bill . . . imposed a tax of two per cent on all incomes so far as they were in excess of $4,000, after allowing deductions for taxes, losses not covered by insurance and bad debts. Declarations of income were required from all persons having over $3,500, under heavy penalties for neglect, refusal or fraud in the matter. As to corporations, the same rate was levied on all interest on bonds and on all dividends and all surplus income above dividends, excepting premiums returned to policy holders by mutual life insurance companies, interest to depositors in savings banks, and dividends of building loan associations. . . . The income-tax measure was immediately and very vigorously antagonized by a considerable number of Eastern Democrats, headed by the New York Congressmen. It was adopted by the ways and means committee mainly through Southern and Western votes. On the 24th of January it was reported to the House. A Democratic caucus on the following day resolved by a small majority, against the wish of Mr. Wilson, to attach the measure to the Tariff Bill. Accordingly, the rule regulating the debate was modified to allow discussion of the amendment. The final votes were then taken on February 1. The internal revenue bill was added to the Wilson Bill by 182 to 50, 44 Democrats voting in the minority and most of the Republicans not voting. The measure as amended was then adopted by 204 to 140, 16 Democrats and one Populist going with the Republicans in the negative. In the hands of the Senate finance committee the bill underwent a thorough revision, differences of opinion in the Democratic majority leading to a careful discussion of the measure in a party caucus. The measure as amended was laid before the full committee March 8, and was introduced in the Senate on the 20th. Changes in details were very numerous. The most important consisted in taking sugar, iron ore and coal off the free list and subjecting each to a small duty. Debate on the bill was opened April 2. It was soon discovered, however, that many Democratic senators were seriously dissatisfied with the schedules affecting the industries of their respective states, and at the end of April there was a lull in the debate while the factions of the majority adjusted their differences. A scheme of changes was finally agreed to in caucus on May 3, and laid before the Senate by the finance committee on the 8th. The most important features were a new sugar schedule which had given great trouble, and very numerous changes from ad valorem to specific duties, with a net increase in rates."— *Political Science Quarterly: Record of Political Events, June,* 1894.

—Very soon after the tariff bill appeared in the Senate, it became apparent that the more powerful protected "interests," and conspicuously the "sugar trust" had acquired control, by some means, of several Democratic senators, who were acting obviously in agreement to prevent an honest fulfillment of the pledges of their party, and especially as concerned the free opening of the country to raw materials. Public opinion of the conduct of the senators in question may be judged from the expressions of so dignified an organ of the business world as the "Banker's Magazine," which said in its issue of July, 1894: "Indifference has largely supplanted the hopes of the friends of tariff reform, as well as the fears of the honest advocates of high protection; and disgust, on the part of the people, has taken the place of trust in our Government, at the exposures of the corruption of the Senate by the most unconscionable and greedy Trusts in existence. Hence the indifference of everybody but the Trusts, and their Senatorial attorneys and dummies with 'retainers' or Trust stocks in their pockets; as it is taken for granted that no interests, but those rich and characterless enough to buy 'protection' will be looked after. . . . Nothing will be regarded as finally settled . . . if the Tariff Bill, as emasculated by the Senate, becomes a law; and it may as well be killed by the House, if the Senate refuse to recede; or, vetoed by the President, if it goes to him in its present shape; and let the existing status continue, until the country can get rid of its purchasable Senators and fill their disgraced seats with honest men who cannot be bought up like cattle at so much per head. This is the growing sentiment of business men generally."— H. A. Pierce, *A Review of Finance and Business* (*Banker's Magazine, July,* 1894).—First in committee, and still more in the Senate after the committee had reported, the bill was radically changed in character from that which the House sent up. The profits of the sugar trust were still protected, and coal and iron ore were dropped back from the free list into the schedules of dutiable commodities. According to estimates made, the average rate of duty in the Wilson Bill as it passed the House was 35.52 per cent., and in the bill which passed the Senate it was 37 per cent., as against 49.58 per cent. in the McKinley law. Hence, the general effect of the revision in the Senate, even as manipulated by the senators suspected of corrupt motives, was an extensive lowering of duties. Some very important additions to the free list made by the Wilson Bill were left untouched by the senators — such as wool, lumber and salt. In view of the extent

of the gains acquired, the supporters of tariff-reform in the House, after prolonged attempts in conference committee to break the strength of the combination against free sugar, free coal and free iron ore, were reluctantly prevailed upon to accept the Senate bill. It had passed the Senate on the 3d of July. The struggle in conference committee lasted until the 13th of August, when the House passed the Senate bill unchanged. The President declined to give his signature to the act, but allowed it to become a law. Immediately after the passage of the bill, the House adopted special enactments admitting raw sugar, coal, iron ore, and barbed wire, free of duty; but these bills were not acted on in the Senate.

TARTAR DYNASTY OF CHINA, The. See CHINA: A. D. 1294–1882.

TARTARS, OR TATARS.—"The Chinese used the name in a general sense, to include the greater part of their northern neighbours, and it was in imitation of them, probably, that the Europeans applied the name to the various nomade hordes who controlled Central Asia after the Mongol invasion. But the name properly belonged, and is applied by Raschid and other Mongol historians, to certain tribes living in the north-eastern corner of Mongolia, who, as I believe, were partially, at least, of the Tungusic race, and whose descendants are probably to be found among the Solons of Northern Manchuria."—H. H. Howorth, *Hist. of the Mongols, pt.* 1, *p.* 25.—"The name of Tartars, or Tatars, has been variously applied. It was long customary among geographical writers to give this title to the Kalmucs and Mongoles, and even to use it as a distinguishing name for those races of men who resemble the Kalmucs in features, and who have been supposed, whether correctly or not, to be allied to them in descent. Later authors, more accurate in the application of terms, have declared this to be an improper use of the name of Tartar, and by them the appellation has been given exclusively to the tribes of the Great Turkish race, and chiefly to the northern division of it, viz. to the hordes spread through the Russian empire and independent Tartary. . . . Whatever may be the true origin of the name of Tartar, custom has appropriated it to the race of men extensively spread through northern Asia, of whom the Ottoman Turks are a branch. It would, perhaps, be more strictly correct to call all these nations Turks, but the customary appellation may be retained when its meaning is determined."—J. C. Prichard, *Researches into the Physical History of the Races of Mankind, ch.* 5, *sect.* 1 (*v.* 2).—"The populations in question [the remnants, in southern Russia and Siberia, of the great Mongol empire of the Kiptchak], belong to one of three great groups, stocks, or families—the Turk, the Mongol, or the Tungus. When we speak of a Tartar, he belongs to the first, whenever we speak of a Kalmuk, he belongs to the second, of these divisions. It is necessary to insist upon this; because, whatever may be the laxity with which the term Tartar is used, it is, in Russian ethnology at least, a misnomer when applied to a Mongol. It is still worse to call a Turk a Kalmuk."—R. G. Latham, *The Nationalities of Europe, v.* 1, *ch.* 23.—"Tartars (more correctly Tatars, but Tartars is the form generally current), a name given to nearly three million inhabitants of the Russian empire, chiefly Moslem and of Turkish origin. The majority—in European Russia—are remnants of the Mongol invasion of the 13th century, while those who inhabit Siberia are survivals of the once much more numerous Turkish population of the Ural-Altaic region, mixed to some extent with Finnish and Samoyedic stems, as also with Mongols. . . . The ethnographical features of the present Tartar inhabitants of European Russia, as well as their language, show that they contain no admixture (or very little) of Mongolian blood, but belong to the Turkish branch of the Ural-Altaic stock, necessitating the conclusion that only Batu, his warriors, and a limited number of his followers were Mongolians, while the great bulk of the 13th-century invaders were Turks."—P. A. Kropotkine, *Art. "Tartars" Encyclopædia Brit.*

TAUNTON: A. D. 1685.—The Welcome to Monmouth.—The Maids of Taunton and their flag.—"When Monmouth marched into Taunton [A. D. 1685] it was an eminently prosperous place. . . . The townsmen had long

leaned towards Presbyterian divinity and Whig politics. In the great civil war, Taunton had, through all vicissitudes, adhered to the Parliament, had been twice closely besieged by Goring, and had been twice defended with heroic valour by Robert Blake, afterwards the renowned Admiral of the Commonwealth. Whole streets had been burned down by the mortars and grenades of the Cavaliers. . . . The children of the men who, forty years before, had manned the ramparts of Taunton against the Royalists, now welcomed Monmouth with transports of joy and affection. Every door and window was adorned with wreaths of flowers. No man appeared in the streets without wearing in his hat a green bough, the badge of the popular cause. Damsels of the best families in the town wove colours for the insurgents. One flag in particular was embroidered gorgeously with emblems of royal dignity, and was offered to Monmouth by a train of young girls." After the suppression of Monmouth's rebellion, and while the "bloody Assizes" of Jeffreys were in progress, these little girls were hunted out and imprisoned, and the queen's maids of honor were permitted to extort money from their parents for the buying of their pardon and release.—Lord Macaulay, *Hist. of Eng., ch.* 5.—See, also, ENGLAND: A. D. 1685 (MAY—JULY).

TAURICA, TAURIC CHERSONESE.—The ancient Greek name of the Crimea, derived from the Tauri, a savage people who once inhabited it; "perhaps," says Grote, "a remnant of the expelled Cimmerians." See BOSPHORUS, THE CITY, &c.; and CIMMERIANS.

TAURIS, Naval battle near.—In the Roman civil war between Cæsar and his antagonists an important naval battle was fought, B. C. 47, near the little island of Tauris, on the Illyrian coast. Vatinius, who commanded on the Cæsarian side, defeated Octavius, and drove him out of the Adriatic.—G. Long, *Decline of the Roman Republic, v.* 5, *ch.* 21.

TCHINOVNIKS.—To keep the vast and complex bureaucratic machine of Russia in motion "it is necessary to have a large and well-drilled army of officials. These are drawn chiefly from the ranks of the noblesse and the clergy, and form a peculiar social class called Tchinovniks, or men with 'Tchins.' As the Tchin plays an important part in Russia, not only in the official world, but also to some extent in social life, it may be well to explain its significance. All officers, civil and military, are, according to a scheme invented by Peter the Great, arranged in fourteen classes or ranks, and to each class or rank a particular name is attached. . . . As a general rule a man must begin at or near the bottom of the official ladder, and he must remain on each step a certain specified time. The step on which he is for the moment standing, or, in other words, the official rank or Tchin which he possesses, determines what offices he is competent to hold. Thus rank or Tchin is a necessary condition for receiving an appointment, but it does not designate any actual office, and the names of the different ranks are extremely apt to mislead a foreigner."—D. M. Wallace, *Russia, ch.* 13.

TEMPERANCE MOVEMENTS. — Organized movements of temperance reform appear to have had their origin in America. The first known Temperance Society is said to have been formed among the farmers of Litchfield county, Connecticut, in 1789; the next appeared in Saratoga county, New York, in 1808 and 1809. In 1813 a Massachusetts Society for the Suppression of Intemperance was formed. In 1829 the movement was nationalized by the organization of the American Temperance Society. In that year, too, it was taken up in Ireland and Scotland, by societies formed at New Ross, in the former, and at Glasgow, in the latter. The first English society of like kind is reported to have taken form at Bradford, in 1830; but a British and Foreign Temperance Society was organized for general agitation of the subject as early as 1831. In America, the first national temperance convention was held at Philadelphia in 1833. A movement for the absolute suppression of the traffic in ardent spirits was begun in Maine, with Neal Dow among its leaders, as early as 1837. It succeeded after fourteen years in accomplishing its purpose, by the passage of the famous Maine Law, in June, 1851. Stringent legislation to restrain the traffic had already been secured in several other states; but really effective prohibition may be said to have been brought to trial first by the Maine Law. Meantime, many widespread temperance organizations had arisen—the Order of Rechabites in England, in 1835; the Societies of the Washingtonians, for the reclamation of drunkards, at Baltimore, in 1840; the Band of Hope among children, instituted at Leeds, England, in 1847; the Order of Sons of Temperance, formed in New York, in 1842; the Good Templars, in 1851. In 1838, Father Mathew entered on his great temperance mission in Ireland. In 1842, John B. Gough began his career as a temperance lecturer. In 1853, the United Kingdom Alliance, for the suppression of the liquor traffic, was formed in Great Britain. In December, 1873, the Women's Temperance Crusade, by meetings for prayer in saloons, was started in Ohio, and spread through many states. In the same year, the Blue Ribbon temperance mission of Francis Murphy was begun. In 1874, the Woman's National Christian Temperance Union was organized, at a convention held in Cleveland, Ohio.—*Centennial Temperance Volume.*

TEMPLARS: A. D. 1118.—The Founding of the Order.—In 1118, nine knights, of whom Hugh de Payens was the principal, took a vow, in the presence of Baldwin I., King of Jerusalem, to be both monks and soldiers, devoting themselves to the protection of the pilgrims who visited the Holy Land. They were given part of the king's palace for residence, and the open space between the palace and the Temple—whence they took the name of Templars. In 1128 Hugh de Payens and others visited Europe and awakened great interest in the Order. "The Templars appeared before the council of Troyes, and gave an account of their order and its objects, which were highly approved of by the fathers. The celebrated Bernard, abbot of Clairvaux, took a lively interest in its welfare, and made some improvements in its rule. A white mantle was assigned as their habit, to which Pope Eugenius some years afterwards added a plain red cross on the left breast; their banner was formed of the black and white striped cloth named Bausćant, which word became their battle-cry, and it bore the humble inscription, 'Not unto us, O Lord, but unto thy name be glory!' Hugh de Payens returned to Syria at the head of three hundred knights of the noblest houses of the West, who had become members of the order."—T. Keightley, *The Crusaders, ch.* 2.

A. D. 1185-1313.—The Order in England and elsewhere.—"The Knights Templars first established the chief house of their order in England, without Holborn Bars [London] on the south side of the street, where Southampton House formerly stood; . . .but when the order had greatly increased in numbers, power, and wealth, and had somewhat departed from its original purity and simplicity, we find that the superior and the knights resident in London began to look abroad for a more extensive and commodious place of habitation. They purchased a large space of ground, extending from the White Friars westward to Essex House without Temple Bar, and commenced the erection of a convent on a scale of grandeur commensurate with the dignity and importance of the chief house of the great religio-military society of the Temple in Britain. It was called the New Temple, to distinguish it from the original establishment at Holborn, which came thenceforth to be known by the name of the Old Temple. . . [In 1185] Geoffrey, the superior of the order in England, caused an inquisition to be made of the lands of the Templars, . . . and the amount of all kinds of property possessed by the Templars in England at that period is astonishing. . . . The annual income of the order in Europe has been roughly estimated at six millions sterling! According to Matthew Paris, the Templars possessed nine thousand manors or lordships in Christendom, besides a large revenue and immense riches arising from the constant charitable bequests and donations of sums of money from pious persons. . . . The Templars, in addition to their amazing wealth, enjoyed vast privileges and immunities."—C. G. Addison, *The Knights Templars, ch.* 3.—When the order of the Templars was suppressed and its property confiscated, the convent and church of the Temple in London were granted by the king, first, in 1313, to Aymer de Valence, Earl of Pembroke; afterwards, successively, to the Duke of Lancaster and to Hugh le Despenser. "The Temple then came for a short time into the hands of the Knights Hospitallers, and during the reign of

Edward III. it seems to have been occupied by the lawyers, as tenants under the Hospitallers. When that order was dissolved by Henry VIII., the property passed into the hands of the Crown, the lawyers still holding possession as tenants. This continued till the reign of James I., when a petition was drawn up and presented to the king asking him to assign the property to the legal body in permanence. This was accordingly done by letters patent, in A. D. 1609, and the Benchers of the Inner and Middle Temple received possession of the buildings, on consideration of a small annual payment to the Crown."—F. C. Woodhouse, *Military Religious Orders, pt. 2, ch. 7.*—"Many of the old retainers of the Temple became servants of the new lawyers, who had ousted their masters. . . . The dining in pairs, the expulsion from hall for misconduct, and the locking out of chambers were old customs also kept up. The judges of Common Pleas retained the title of knight, and the Fratres Servientes of the Templars arose again in the character of learned serjeants-at-law, the coif of the modern serjeant being the linen coif of the old Freres Serjens of the Temple."—W. Thornbury, *Old and New London, v. 1, ch. 14.*

A. D. 1299.—Their last campaign in Palestine. See Crusades: A. D. 1299.

A. D. 1307-1314.—The prosecution and destruction of the order.—"When the Holy Land fell completely into Mahomedan hands on the loss of Acre in 1291 [see Jerusalem: A. D. 1291] they [the Templars] abandoned the hopeless task and settled in Cyprus. By the end of the thirteenth century they had almost all returned to Europe. They were peculiarly strong and wealthy in France — the strength and wealth were alike dangerous to them. In Paris they built their fortress, the Temple, over against the King's palace of the Louvre; and in that stronghold the King himself had once to take refuge from the angry Parisian mob, exasperated by his heavy extortions. During the life and death struggle with the Papacy, the order had not taken the side of the Church against the sovereign; for their wealth had held them down. Philip [Philip IV], however, knew no gratitude, and they were doomed. A powerful and secret society endangered the safety of the state: their wealth was a sore temptation: there was no lack of rumours. Dark tales came out respecting the habits of the order; tales exaggerated and blackened by the diseased imagination of the age. Popular proverbs, those ominous straws of public opinion, were heard in different lands, hinting at dark vices and crimes. Doubtless the vows of the order, imposed on unruly natures, led to grievous sins against the first laws of moral life. And there was more than this: there were strange rumours of horrible infidelity and blasphemy; and men were prepared to believe everything. So no one seemed to be amazed when, in October, 1307, the King made a sudden coup d'état, arrested all the Templars in France on the same day, and seized their goods. The Temple at Paris with the Grand Master fell into his hands. Their property was presently placed in the custody of the Pope's nuncios in France; the knights were kept in dark and dismal prisons. Their trial was long and tedious. Two hundred and thirty-one knights were examined, with all the brutality that examination then meant; the Pope also took the depositions of more than seventy. From these examinations what can we learn? All means were used: some were tortured, others threatened, others tempted with promises of immunity. They made confession accordingly; and the ghastly catalogue of their professed ill-doings may be read in the history of the trial. Who shall say what truth there was in it all? Probably little or none. Many confessed and then recanted their confession. The golden image with eyes of glowing carbuncle which they worshipped; the trampling and spitting on the crucifix; the names of Galla and Baphomet; the hideous practices of the initiation;—all these things pass before us, in the dim uncertainty, like some horrible procession of the vices in hell. What the truth was will never be known. . . . The knights made a dignified defence in these last moments of their history; they did not flinch either at the terrible prospect before them, or through memory of the tortures which they had undergone. Public opinion, in and out of France, began to stir against the barbarous treatment they had received; they were no longer proud and wealthy princes, but suffering martyrs, showing bravery and a firm front against the cruelties of the King and his lawyers. Marigni, Philip's minister and friend, and the King himself, were embarrassed by the number and firmness of their victims, by the sight of Europe looking aghast, by the murmurs of the people. Marigni suggested that men who had confessed and recanted might be treated as relapsed heretics, such being the law of the Inquisition, (what irony was here!) and accordingly in 1310 an enclosure was made at Paris, within which fifty-nine Templars perished miserably by fire. Others were burnt later at Senlis. . . . The King and Pope worked on the feeble Council, until in March 1312 the abolition of the order was formally decreed; and its chief property, its lands and buildings, were given over to the Knights of St. John, to be used for the recovery of the Holy Land; 'which thing,' says the Supplementor to William of Nangis, 'came not to pass, but rather the endowment did but make them worse than before.' The chief part of the spoil, as might be well believed, never left the King's hands. One more tragedy, and then all was over. The four heads of the order were still at Paris, prisoners —Jacques de Molai, Grand Master; Guy of Auvergne, the Master of Normandy, and two more. The Pope had reserved their fate in his own hands, and sent a commission to Paris, who were enjoined once more to hear the confession of these dignitaries, and then to condemn them to perpetual captivity. But at the last moment the Grand Master and Guy publicly retracted their forced confessions, and declared themselves and the order guiltless of all the abominable charges laid against them. Philip was filled with devouring rage. Without further trial or judgment he ordered them to be led that night to the island in the Seine; there they were fastened to the stake and burnt."—G. W. Kitchin, *Hist. of France, v. 1, bk. 3, ch. 10, sect. 3.*—In England, a similar prosecution of the Templars, instigated by the pope, was commenced in January, 1308, when the chiefs of the order were seized and imprisoned and subjected to examination with torture. The result was the dissolution of the order and the confiscation of its property;

but none of the knights were executed, though some died in prison from the effects of their barbarous treatment. "The property of the Templars in England was placed under the charge of a commission at the time that proceedings were commenced against them, and the king very soon treated it as if it were his own, giving away manors and convents at his pleasure. A great part of the possessions of the Order was subsequently made over to the Hospitallers. . . . Some of the surviving Templars retired to monasteries, others returned to the world, and assumed secular habits, for which they incurred the censures of the Pope. . . . In Spain, Portugal, and Germany, proceedings were taken against the Order; their property was confiscated, and in some cases torture was used; but it is remarkable that it was only in France, and those places where Philip's influence was powerful, that any Templar was actually put to death."—F. C. Woodhouse, *Military Religious Orders, pt.* 2, *ch.* 6–7 *and* 5.

TEMPLE, The (London). See Templars: A. D. 1185–1313.

TEMPLE OF CONCORD AT ROME, The.—After the long contest in Rome over the Licinian Laws, which were adopted B. C. 367, M. Furius Camillus—the great Camillus—being made Dictator for the fifth time, in his eightieth year, brought about peace between the patricians and plebeians, in commemoration of which he vowed a temple to Concord. "Before he could dedicate it, the old hero died. The temple, however, was built according to his design; its site, now one of the best known among those of ancient Rome, can still be traced with great certainty at the north-western angle of the Forum, immediately under the Capitoline. The building was restored with great magnificence by the Emperor Tiberius; and it deserved to be so, for it commemorated one of the greatest events of Roman history."—H. G. Liddell, *Hist. of Rome, bk.* 2, *ch.* 15 (*v.* 1).

TEMPLE OF DIANA. See Ephesus.

TEMPLE OF JANUS, The.—"The Temple of Janus was one of the earliest buildings of Rome, founded, according to Livy (i. 19.) by Numa. It stood near the Curia, on the north-east side of the Forum, at the verge of a district called the Argiletum. . . . [It was] a small 'ædicula' or shrine, which towards the end of the Republic, or perhaps earlier, was of bronze. It is shown with much minuteness on a First Brass of Nero as a small cella, without columns, but with richly ornamented frieze and cornice. Its doors were closed on those rare occasions when Rome was at peace with all the world. From the time of its traditional founder, Numa, to that of Livy, it was only twice shut—once after the first Punic War, and secondly after the victory of Augustus at Actium. . . . It contained a very ancient statue, probably by an Etruscan artist, of the doublefaced Janus Bifrons, or Geminus. . . . The Temple of Janus gave its name to this part of the edge of the Forum, and from the numerous shops of the argentarii or bankers and money-lenders which were there, the word Janus came to mean the usurers' quarter."—J. H. Middleton, *Ancient Rome in* 1885, *ch.* 5.—The Temple of Janus was closed, once more, by Vespasian, after the destruction of Jerusalem and the ending of the war in Judea, A. D. 71. "It had stood open since the German wars of the first princeps [Augustus]; or, according to the computation of the christian Orosius, from the birth of Christ to the overthrow of the Jewish people: for the senate had refused to sanction Nero's caprice in closing it on his precarious accommodation with Parthia. Never before had this solemn act addressed the feelings of the citizens so directly. . . . The Peace of Vespasian was celebrated by a new bevy of poets and historians not less loudly than the Peace of Augustus. A new era of happiness and prosperity was not less passionately predicted."—C. Merivale, *Hist. of the Romans, ch.* 60.

TEMPLE OF SOLOMON, The.—"As soon as David had given to his people the boon of a unique capital, nothing could be more natural than the wish to add sacredness to the glory of the capital by making it the centre of the national worship. According to the Chronicles, David . . . had made unheard-of preparations to build a house for God. But it had been decreed unfit that the sanctuary should be built by a man whose hands were red with the blood of many wars, and he had received the promise that the great work should be accomplished by his son. Into that work Solomon threw himself with hearty zeal in the month Zif of the fourth year of his reign, when his kingdom was consolidated. . . . He inherited the friendship which David had enjoyed, with Hiram, King of Tyre. . . . The friendliest overtures passed between the two kings in letters, to which Josephus appeals as still extant. A commercial treaty was made by which Solomon engaged to furnish the Tyrian king with annual revenues of wheat, barley, and oil, and Hiram put at Solomon's disposal the skilled labour of an army of Sidonian wood-cutters and artisans. . . . Some writers have tried to minimise Solomon's work as a builder, and have spoken of the Temple as an exceedingly insignificant structure which would not stand a moment's comparison with the smallest and humblest of our own cathedrals. Insignificant in size it certainly was, but we must not forget its costly splendour, the remote age in which the work was achieved, and the truly stupendous constructions which the design required. Mount Moriah was selected as a site hallowed by the tradition of Abraham's sacrifice, and more recently by David's vision of the Angel of the Pestilence with his drawn sword on the threshing-floor of the Jebusite Prince Araunah. But to utilise this doubly consecrated area involved almost superhuman difficulties, which would have been avoided if the loftier but less suitable height of the Mount of Olives could have been chosen. The rugged summit had to be enlarged to a space of 500 yards square, and this level was supported by Cyclopean walls, which have long been the wonder of the world. . . . The caverns, quarries, water storages, and subterranean conduits hewn out of the solid rock, over which Jerusalem is built, could only have been constructed at the cost of immeasurable toil. . . . It was perhaps from his Egyptian father-in-law that Solomon, to his own cost, learnt the secret of forced labour which alone rendered such undertakings possible. . . . Four classes were

subject to it. 1. The lightest labour was required from the native freeborn Israelites (ezrach). They were not regarded as bondsmen, . . . yet 30,000 of these were required in relays of 10,000 to work, one month in every three, in the forest of Lebanon. 2. There were the strangers, or resident aliens (Gerim), such as the Phœnicians and Giblites, who were Hiram's subjects and worked for pay. 3. There were three classes of slaves — those taken in war, or sold for debt, or home-born. 4. Lowest and most wretched of all, there were the vassal Canaanites (Toshabim), from whom were drawn those 70,000 burden-bearers, and 80,000 quarry-men, the Helots of Palestine, who were placed under the charge of 3,600 Israelite officers. The blotches of smoke are still visible on the walls and roofs of the subterranean quarries where these poor serfs, in the dim torchlight and suffocating air, 'laboured without reward, perished without pity, and suffered without redress.' The sad narrative reveals to us, and modern research confirms, that the purple of Solomon had a very seamy side, and that an abyss of misery heaved and moaned under the glittering surface of his splendour. . . . Apart from the lavish costliness of its materials the actual Temple was architecturally a poor and commonplace structure. It was quite small —only 90 feet long, 35 feet broad, and 45 feet high. It was meant for the symbolic habitation of God, not for the worship of great congregations. . . . Of the external aspect of the building in Solomon's day we know nothing. We cannot even tell whether it had one level roof, or whether the Holy of Holies was like a lower chancel at the end of it; nor whether the roof was flat or, as the Rabbis say, ridged; nor whether the outer surface of the three-storied chambers which surrounded it was of stone, or planked with cedar, or overlaid with plinths of gold and silver; nor whether, in any case, it was ornamented with carvings or left blank; nor whether the cornices only were decorated with open flowers like the Assyrian rosettes. Nor do we know with certainty whether it was supported within by pillars or not. . . . It required the toil of 300,000 men for twenty years to build one of the pyramids. It took two hundred years to build and four hundred to embellish the great Temple of Artemis of the Ephesians. It took more than five centuries to give to Westminster Abbey its present form. Solomon's Temple only took seven and a half years to build; but . . . its objects were wholly different from those of the great shrines which we have mentioned. . . . Needing but little repair, it stood for more than four centuries. Succeeded as it was by the Temples of Zerubbabel and of Herod, it carried down till seventy years after the Christian era the memory of the Tabernacle in the wilderness, of which it preserved the general outline, though it exactly doubled all the proportions and admitted many innovations."— F. W. Farrar, *The First Book of Kings, ch.* 14 (*Expositor's Bible*).

A. D. 1769-1772.—The first settlers in the eastern valley.—The Watauga commonwealth and its constitution.—"Soon after the successful ending of the last colonial struggle with France, and the conquest of Canada, the British king issued a proclamation forbidding the English colonists from trespassing on Indian grounds, or moving west of the mountains [see Northwest Territory of the U. S.: A. D. 1763]. But in 1768, at the treaty of Fort Stanwix, the Six Nations agreed to surrender to the English all the lands lying between the Ohio and the Tennessee [see United States of Am.: A. D. 1765-1768]; and this treaty was at once seized upon by the backwoodsmen as offering an excuse for settling beyond the mountains. However, the Iroquois had ceded lands to which they had no more right than a score or more other Indian tribes. . . . The great hunting-grounds between the Ohio and the Tennessee formed a debatable land, claimed by every tribe that could hold its own against its rivals. The eastern part of what is now Tennessee consists of a great hill-strewn, forest-clad valley, running from northeast to southwest, bounded on one side by the Cumberland, and on the other by the Great Smoky and Unaka Mountains; the latter separating it from North Carolina. In this valley arise and end the Clinch, the Holston, the Watauga, the Nolichucky, the French Broad, and the other streams, whose combined volume makes the Tennessee River. The upper end of the valley lies in southwestern Virginia, the headwaters of some of the rivers being well within that State; and though the province was really part of North Carolina, it was separated therefrom by high mountain chains, while from Virginia it was easy to follow the watercourses down the valley. Thus, as elsewhere among the mountains forming the western frontier, the first

movements of population went parallel with, rather than across, the ranges. As in western Virginia the first settlers came, for the most part, from Pennsylvania, so, in turn, in what was then western North Carolina, and is now eastern Tennessee, the first settlers came mainly from Virginia, and, indeed, in great part, from this same Pennsylvanian stock. Of course, in each case there was also a very considerable movement directly westward. They were a sturdy race, enterprising and intelligent, fond of the strong excitement inherent in the adventurous frontier life. Their untamed and turbulent passions, and the lawless freedom of their lives, made them a population very productive of wild, headstrong characters; yet, as a whole, they were a God-fearing race, as was but natural in those who sprang from the loins of the Irish Calvinists. Their preachers, all Presbyterians, followed close behind the first settlers and shared their toil and dangers. . . . In 1769, the year that Boon first went to Kentucky, the first permanent settlers came to the banks of the Watauga, the settlement being merely an enlargement of the Virginia settlement, which had for a short time existed on the head-waters of the Holston, especially near Wolf Hills. At first the settlers thought they were still in the domain of Virginia, for at that time the line marking her southern boundary had not been run so far west. . . . But in 1771, one of the new-comers, who was a practical surveyor, ran out the Virginia boundary line some distance to the westward, and discovered that the Watauga settlement came within the limits of North Carolina. Hitherto the settlers had supposed that they themselves were governed by the Virginian law, and that their rights as against the Indians were guaranteed by the Virginian government; but this discovery threw them back upon their own resources. They suddenly found themselves obliged to organize a civil government. . . . About the time that the Watauga commonwealth was founded, the troubles in North Carolina came to a head. Open war ensued between the adherents of the royal governor, Tryon, on the one hand, and the Regulators, as the insurgents styled themselves, on the other, the struggle ending with the overthrow of the Regulators at the battle of Alamance [see NORTH CAROLINA: A. D. 1766–1771]. As a consequence of these troubles, many people from the back counties of North Carolina crossed the mountains, and took up their abode among the pioneers on the Watauga and upper Holston; the beautiful valley of the Nolichucky soon receiving its share of this stream of immigration. Among the first comers were many members of the class of desperate adventurers always to be found hanging round the outskirts of frontier civilization. . . . But the bulk of the settlers were men of sterling worth; fit to be the pioneer fathers of a mighty and beautiful state. . . . Such were the settlers of the Watauga, the founders of the commonwealth that grew into the State of Tennessee, who early in 1772 decided that they must form some kind of government that would put down wrong-doing and work equity between man and man. Two of their number already towered head and shoulders above the rest in importance and merit especial mention; for they were destined for the next thirty years to play the chief parts in the history of that portion of the Southwest which largely through their own efforts became the State of Tennessee. These two men, neither of them yet thirty years of age, were John Sevier and James Robertson. . . . With their characteristic capacity for combination, so striking as existing together with the equally characteristic capacity for individual self-help, the settlers determined to organize a government of their own. They promptly put their resolution into effect early in the spring of 1772, Robertson being apparently the leader in the movement. They decided to adopt written articles of agreement, by which their conduct should be governed; and these were known as the Articles of the Watauga Association. They formed a written constitution, the first ever adopted west of the mountains, or by a community composed of American-born freemen. It is this fact of the early independence and self-government of the settlers along the head-waters of the Tennessee that gives to their history its peculiar importance. They were the first men of American birth to establish a free and independent community on the continent. . . . The first step taken by the Watauga settlers, when they had determined to organize, was to meet in general convention, holding a kind of folk-thing, akin to the New England town-meeting. They then elected a representative assembly, a small parliament or 'witanagemot,' which met at Robertson's station. Apparently the freemen of each little fort or palisaded village, each block-house that was the centre of a group of detached cabins and clearings, sent a member to this first frontier legislature. It consisted of thirteen representatives, who proceeded to elect from their number five—among them Sevier and Robertson—to form a committee or court, which should carry on the actual business of government, and should exercise both judicial and executive functions. This court had a clerk and a sheriff, or executive officer, who respectively recorded and enforced their decrees. . . . In fact, the dwellers, in this little outlying frontier commonwealth, exercised the rights of full statehood for a number of years; establishing in true American style a purely democratic government with representative institutions."— T. Roosevelt, *The Winning of the West, v.* 1, *ch.* 7.

A. D. 1776-1784. — Annexation to North Carolina.—Cession by that state to the Congress of the Confederation.—Consequent revolt.—Repeal of the act of cession.—"The Watauga people had hopes, when the articles of association were adopted, of being able eventually to form an independent government, governed as the older colonies were governed, by royal governors. When the disagreements between the colonies and the mother country arose, they modified their views to the new order of things, and regarded themselves as a distinct though as yet inchoate state. But their weakness . . . rendered the protection of some more powerful state necessary for their welfare. . . . They petitioned North Carolina for annexation in 1776. Their petition was granted. . . . The provincial congress of North Carolina met at Halifax in November, 1776, and [Robertson, Sevier and two others] were delegates from Washington District, Watauga settlement. . . . After

the annexation of the Washington District the old form of government was allowed to stand until the spring of 1777. . . . In November of this year, 1777, the District of Washington became Washington County. . . . From 1777 until the disturbances of eight years later, the history of Tennessee was a part of the history of North Carolina. . . . The part played by the inhabitants of Tennessee in the war for independence was active, and in one instance [at King's Mountain] decisive. Their operations were chiefly of a desultory, guerrilla kind, under the leadership of Sevier . . . and Shelby." Sevier was also the leader in wars with the Indians, which were carried on with unsparing fierceness on both sides. "In the April session of 1784, the General Assembly of North Carolina, in accordance with the recommendation of Congress itself, as well as with the dictates of a far-seeing and enlightened statesmanship, imitated the example of Virginia and New York [see UNITED STATES OF AM.: A. D. 1781–1786], and ceded to the United States all the territory which is now the State of Tennessee. This of course included all the settlements. The condition of the cession was its acceptance by Congress within two years. Until Congress should have accepted the ceded territory, the jurisdiction of North Carolina over it was to remain in every respect the same as heretofore. . . . When the question of cession was first broached, it was accepted by the four representatives of the western counties at Hillsboro, as well as by those who proposed it, as the natural and legitimate solution of a complex problem. No one apparently dreamed of opposition on the part of the settlers themselves. . . . There is no reason to think that the Watauga people had any objection to the cession. . . . The objection was against the manner of the cession and its conditions. . . . The main cause of complaint was that North Carolina had left them without any form of government for two years. . . . A storm of indignation swept through the entire settlement. . . . The people regarded themselves without government, and, true to the traditions of their race, they sought the solution of the difficulty in their own resources. . . . It is one of the noteworthy facts in the history of institutions that the possessors of English tradition always begin with the first primal germ of local self-government at hand, be it court leet, court of quarter sessions, township, county, school district, or military company, and build upward. The Watauga people had nothing so convenient as the militia companies, and they began with them as representing a more minutely varied constituency than the county court. Each company elected two representatives, and the representatives so elected in each county formed themselves into a committee, and the three committees of Washington, Sullivan, and Greene counties met as a kind of impromptu or temporary legislature, and decided to call a general convention to be elected by the people of the different counties. This convention met on the 23d of August, 1784, at Jonesboro. John Sevier was elected president, and Landon Carter secretary. . . . It is supposed that the convention which met at Jonesboro adopted the resolution to form a 'separate and distinct State, independent of the State of North Carolina.' . . . Provision was made for the calling of a future convention in which representation was to be according to companies. . . . The meeting adjourned, having fairly inaugurated the contest with North Carolina, which still claimed jurisdiction." Soon afterward the legislature of North Carolina repealed the act of cession, and "for a time it was supposed that this would terminate the agitation in favor of a new State." —J. Phelan, *Hist. of Tennessee, ch.* 5–10.

A. D. 1780.—The Battle of King's Mountain. See UNITED STATES OF AM.: A. D. 1780–1781.

A. D. 1785.—The organization of the State of Franklin.—"Toward the close of May [1785] the western lands being again under discussion [in Congress], a resolution was carried urging North Carolina to reconsider her act of the previous November, and once more cede to Congress her possessions beyond the mountains. Had the request been granted, there can be no doubt the measure would have speedily brought peace and quiet to that distracted region. But North Carolina was too intent on bringing her rebellious subjects to terms to think for a moment of bestowing them with their lands and goods on Congress. Indeed, when the news of the request was carried into the district some months later, the malcontents expressed much surprise. They could not, they said, understand why Congress should apply to North Carolina; North Carolina had nothing to do with them. The parent State had, by her act of 1784, given them away. Congress did not take them under its protection. They belonged, therefore, to nobody, and while in this condition had called a convention, had framed a constitution, had formed a new State, had chosen for it a name, and elected a Legislature which was actually in session at the time the act of the 23d of May was passed. . . . Much of what they stated was strictly true. The delegates to the second convention had assembled early in 1785. These had given the State the name of Franklin, and had drawn up a constitution which they submitted to the people. It was expected that the men of the district would consider it carefully, and select delegates to a third convention, which should have full power to ratify or reject. The place fixed upon for the meeting of the convention was Greenville. But as there was then no printing-press nearer than Charleston or Richmond, and as much time must elapse before the constitution could become known to all, the delegates were not to convene till the 14th of November. Meanwhile the Legislature was to organize. Elections were held without delay; members were chosen after the manner in which the settlers had long been accustomed to elect representatives to the Assembly of the parent State, and these, meeting at Jonesboro, conducted their business with so much dispatch that on the last day of March they adjourned. Many acts were passed by them. But one alone excited general comment, and was the cause of unbounded merriment across the mountains. A list of articles at that time scarce to be met with in the State of Franklin would be a long one. But there would be no article in the list less plentiful than money. . . . When, therefore, the Legislature came to determine what should be the legal currency of the State, it most wisely contented itself with fixing the value of

such articles as had, from time immemorial, been used as money. One pound of sugar, the law said, should pass for a shilling-piece; the skin of a raccoon or a fox for a shilling and threepence. A gallon of rye whiskey, it was thought, was worth twice that sum, while a gallon of peach-brandy or a yard of good nine hundred flax linen was each to pass for a three-shilling piece. Some difficulty was met with in selecting articles that could be easily carried from place to place and expressive of large values. It was, however, finally determined that a clean beaver-skin, an otter- or a deer-skin, should each of them be the representative of six shillings. In this kind of money, the law further prescribed, the salary of every officer of the State, from the Governor down to the hangman, was to be paid. When this act became known in the East the wits were greatly amused. . . . In the belief that the new money could not be counterfeited they were much mistaken. Many bundles of what seemed to be otter-skins were soon passing about, which, on being opened, were found to be skins of raccoons with tails of otters sewed to them. . . . The name of the State has often been asserted to be Frankland, the land of the Franks, or Freemen. . . . But letters are extant from high officials of the State to Benjamin Franklin declaring that it was named after him."—J. B. McMaster, *Hist. of the People of the U. S., v.* 1, *ch.* 3, *with foot-note.*

Also in: J. G. M. Ramsey, *Annals of Tennessee, ch.* 4.

A. D. 1785-1796.—The troubled history and the fall of the state of Franklin.—The rise of the state of Tennessee.— On receiving news of the organization of the independent state of Franklin, Governor Martin, of North Carolina, issued a proclamation which was skilfully addressed to the cooler judgment of the mountaineers and which "was not without its effect." But, although the adherents of North Carolina "gradually gained ground in the new commonwealth, a majority still clung to Sevier, and refused to recognize any government but the one they themselves had organized. In this opposition of parties, disorders sprang up which presently degenerated into lawlessness. Both governments claimed jurisdiction, and both sought to exercise it. The consequence was that both became inefficient. Party quarrels ensued; old friends became enemies; Tipton and his followers openly supported the claims of North Carolina; Sevier sought to maintain his authority as the executive officer of Franklin. This antagonistic spirit led to the commission of various outrages. . . . But in the midst of these inglorious quarrels, Governor Sevier did not neglect to defend from Indian aggressions the state over which he had been called to preside. . . . He was far less successful, however, in giving peace to the distracted state of Franklin. The continuance of intestine dissensions, and the nice balance of parties which took place in 1787, induced the people to refuse to pay taxes either to North Carolina or to the local government, until the supremacy of one or the other should be more generally acknowledged. In this state of affairs, with his government tottering to its downfall, Sevier earnestly appealed to North Carolina for a ratification of the independence of the state of Franklin, and to Franklin himself, and the governors of Georgia and Virginia, for counsel and assistance. Disappointed on all sides, he finally rested for support upon his immediate friends, conscious of the rectitude of his own intentions. . . . But the people were already weary of a feud which threatened, at every fresh outbreak, to end in bloodshed. In 1787 the last legislature of the state of Franklin held its session at Greenville. . . . The conciliatory measures of North Carolina presently disarmed the malecontents of all further arguments for opposing the reunion; and in February, 1788, the state of Franklin ceased to exist." Fierce conflicts between Sevier and Tipton and their hotter partisans still continued for some time; until, in October, Sevier was arrested for high treason and imprisoned at Morgantown. He escaped soon after, through the aid of his sons, was elected to the North Carolina senate, and was permitted to qualify for the seat on renewing his oath of allegiance. "His services were remembered and his faults forgotten." Meantime, settlements on the Cumberland, founded in 1779 by James Robertson, had prospered and grown strong, and Nashville, the chief among them, assumed its name in 1784, "in commemoration of the patriotic services of Colonel Francis Nash," of North Carolina, who fell in the battle of Germantown. In 1790, after ratifying the Federal Constitution, North Carolina, re-enacted the cession of her western territory, coinciding with the present state of Tennessee, to the United States, stipulating "that no regulation made or to be made by Congress shall tend to the emancipation of slaves." The "Territory southwest of the Ohio" was then organized, with William Blount for governor. Six years later (January, 1796), the population of the Territory having been ascertained by a census to be 67,000 free white inhabitants and 10,000 slaves, a constitution was adopted, the State of Tennessee was formed, with John Sevier for Governor, and, after some opposition in Congress, it was formally admitted to its place and rank as one of the United States of America. Its first Representative in the House was Andrew Jackson.— W. H. Carpenter, *Hist. of Tennessee, ch.* 13–17.

A. D. 1861 (January—May).— The mode in which the state was dragged into Rebellion.— "The Legislature of Tennessee met on the 6th of January. On the 12th, a bill for the calling of a state convention [with the object of following the lead, in secession, which South Carolina had taken on the 20th of December — See United States of Am.: A. D. 1860 (October — December)] was passed. It was passed subject to the approval of the voters. The election took place on the 8th day of February. The people voted against holding a convention by 67,360, to 54,156. In disregard of this vote of the people, however, the legislature, on May 1st, passed a joint resolution authorizing the governor to enter into a military league with the Confederate States. The league was formed. The Governor,

Isham G. Harris, sent a message to the legislature, announcing the fact. He stated its terms. . . . It stipulated that until the state should become a member of the Confederacy, 'the whole military force and military operations, offensive and defensive, of said state, in the impending conflict with the United States, shall be under the chief control and direction of the President of the Confederate States.' It was also agreed that the state would, as soon as it should join the Confederacy, turn over all public property it might acquire from the United States. The legislature ratified the league by decided majorities of both branches. These final proceedings took place on the 7th day of May. On the preceding day, the legislature put forth a declaration of independence. It was submitted to the votes of the people for ratification. This document waives the right of secession, as follows: 'We, the people of the State of Tennessee, waiving an expression of opinion as to the abstract doctrine of secession, but asserting the right, as a free and independent people,' declare that all the laws and ordinances by which Tennessee became a member of the Federal Union, 'are hereby abrogated.' The vote for separation was declared by the governor to be 104,019 for, and 47,238 against that measure. It thus appears that the Legislature of Tennessee, in declaring the separation of the state from the Federal Union, placed its action upon the ground of a revolutionary right, which all admit to be inalienable, if the cause be just."—S. S. Cox, *Three Decades of Federal Legislation, ch.* 6.

A. D. 1861 (June).—The loyalty of East Tennessee and its resistance to Secession.—"For separation and representation at Richmond, East Tennessee gave [at the election, June 8, when the question of secession was nominally submitted to the people, the state having been already delivered by its governor and legislature to the Confederacy] 14,700 votes; and half of that number were Rebel troops, having no authority under the Constitution to vote at any election. For 'no separation' and 'no representation,'—the straight-out Union vote,—East Tennessee gave 33,000, or 18,300 of a majority, with at least 5,000 quiet citizens deterred from coming out by threats of violence, and by the presence of drunken troops at the polls to insult them. . . . By . . . fraud and villainy, . . . the great State of Tennessee was carried out of the Union. The loyal people of East Tennessee, to their great honor, had no lot or part in the work."—W. G. Brownlow, *Sketches of the Rise, Progress and Decline of Secession, pp.* 222–223.—"Finding themselves powerless before the tyranny inaugurated, the Unionists of East Tennessee resolved, as a last resort, to hold a Convention at Greenville, to consult as to the best course to pursue. This Convention met June 17th. The attendance was very large—thirty-one counties having delegates present on the first day. Judge Nelson presided. After a four days' session it adopted a Declaration of Grievances and Resolutions," declaring that "we prefer to remain attached to the Government of our fathers. The Constitution of the United States has done us no wrong. The Congress of the United States has passed no law to oppress us. . . . The secession cause has thus far been sustained by deception and falsehood." The Convention protested on behalf of East Tennessee against being dragged into rebellion, and appointed commissioners to pursue measures looking to the formation of a separate state. "Vain protest! It was not long before those Unionists and protestants against wrong were flying for their lives, and were hunted down like wild beasts."—O. J. Victor, *Hist. of the Southern Rebellion, div.* 5, *ch.* 5 (*v.* 2).

A. D. 1865-1866.— Reconstruction.— Abolition of Slavery.—Restoration of the State to its "former, proper, practical relation to the Union."— In the early part of 1865, Andrew Johnson, though Vice-President-elect, was "still discharging the functions of military governor of Tennessee. A popular convention originating from his recommendation and assembling under his auspices, was organized at Nashville on the 9th day of January, 1865. Membership of the body was limited to those who 'give an active support to the Union cause, who have never voluntarily borne arms against the Government, who have never voluntarily given aid and comfort to the enemy.'. . . Tennessee, as Johnson bluntly maintained, could only be organized and controlled as a State in the Union by that portion of her citizens who acknowledged their allegiance to the Government of the Union. Under this theory of procedure the popular convention proposed an amendment to the State constitution, 'forever abolishing and prohibiting slavery in the State,' and further declaring that 'the Legislature shall make no law recognizing the right of property in man.' The convention took several other important steps, annulling in whole and in detail all the legislation which under Confederate rule had made the State a guilty participant in the rebellion. Thus was swept away the ordinance of Secession, and the State debt created in aid of the war against the Union. All these proceedings were submitted to popular vote on the 22d of February, and were ratified by an affirmative vote of 25,293 against a negative vote of 48. The total vote of the State at the Presidential election of 1860 was 145,333. Mr. Lincoln's requirement of one-tenth of that number was abundantly complied with by the vote on the questions submitted to the popular decision. . . . Under this new order of things, William G. Brownlow, better known to the world by his soubriquet of 'Parson' Brownlow, was chosen governor without opposition on the 4th day of March, 1865, the day of Mr. Lincoln's second inauguration. The new Legislature met at Nashville a month later, on the 3d of April, and on the 5th ratified the Thirteenth Amendment; thus adding the abolition of slavery by National authority to that already decreed by the State. The Legislature completed its work by electing two consistent Union men, David T. Patterson and Joseph S. Fowler, to the United States Senate. The framework of the new Government was thus completed and in operation before the death of Mr. Lincoln."— J. G. Blaine, *Twenty Years of Congress, v. 2, ch. 3.*— After the organization of a loyal government in Tennessee, more than a year passed before the restoration of the State to its constitutional relations with the United States, by the admission of its Senators and Representatives to Congress. Tennessee was the first, however, among the seceded States to obtain that recognition, by being the first to ratify the Fourteenth Constitutional Amendment. "Immediately on the reception of the circular of the Secretary of State containing the proposed amendment, Governor Brownlow issued a proclamation summoning the Legislature of Tennessee to assemble at Nashville on the 4th of July [1866]. . . . Every effort was made to prevent the assembling of the required number [to constitute a quorum]. The powerful influence of the President himself was thrown in opposition to ratification." By arresting recalcitrant members, and by "the expedient of considering the members who were under arrest and confined in a committee room as present in their places," the quorum was assumed to have been made up and the amendment was ratified. "Immediately after the news was received in Washington, Mr. Bingham, in the House of Representatives, moved to reconsider a motion by which a joint resolution relating to the restoration of Tennessee had been referred to the Committee on Reconstruction," and, this motion being adopted, he introduced a substitute which declared, "That the State of Tennessee is hereby restored to her former, proper, practical relation to the Union, and again entitled to be represented by Senators and Representatives in Congress, duly elected and qualified, upon their taking the oaths of office required by existing laws." On the following day this joint resolution passed the House, and a day later (July 21st), it was adopted by the Senate.— W. H. Barnes, *Hist. of the 39th Cong., ch. 20.*

TERROR, The Reign of.— As commonly used, this phrase describes the fearful state of things that prevailed in France during a period of the French Revolution which ended with

the fall of Robespierre, July 27 (Ninth Thermidor), 1794. The beginning of the period so called is usually placed at the date of the coup d'état, May 31—June 2, 1793, which overthrew the Girondists and gave unrestrained power into the hands of the Terrorists of the Mountain. The Reign of Terror was not however fully organized as a deliberately merciless system, and made, according to the demand of the Paris Commune, "the order of the day," until the following September. In another view, the Reign of Terror may be said to have begun with the creation of the terrible Revolutionary Tribunal, March, 1793. See FRANCE: A. D. 1793 (FEBRUARY—APRIL), to 1794 (JULY).

TEUKRIANS, The.—"The elegiac poet Kallinus, in the middle of the seventh century B. C., was the first who mentioned the Teukrians; he treated them as immigrants from Krête, though other authors represented them as indigenous, or as having come from Attica. However the fact may stand as to their origin, we may gather that, in the time of Kallinus, they were still the great occupants of the Troad [northwestern Asia Minor]. Gradually the south and west coasts, as well as the interior of this region, became penetrated by successive colonies of Æolic Greeks. . . . The name Teukrians gradually vanished out of present use and came to belong only to the legends of the past."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 14.

TEUTECAS, The. See AMERICAN ABORIGINES: ZAPOTECS, ETC.

TEUTONES.—TEUTONIC.—"In the way of evidence of there being Teutones amongst the Germans, over and above the associate mention of their names with that of the Cimbri [see CIMBRI], there is but little. They are not so mentioned either by Tacitus or Strabo. . . . Arguments have been taken from . . . the supposed connection of the present word 'Deut-sch' = 'German,' with the classical word 'Teut-ones.' . . . The reasoning . . . runs thus: The syllable in question is common to the word 'Teut-ones,' 'Teut-onicus,' 'Theod-iscas,' 'teud-uiscus,' 'teut-iscus,' 'tût-iske,' 'dût-iske,' 'tiut-sche,' 'deut-sch'; whilst the word Deut-sch means German. As the 'Teut-ones' were Germans, so were the Cimbri also. Now this line of argument is set aside by the circumstance that the syllable 'Teut-' in Teut-ones and Teut-onicus as the names of the confederates of the Cimbri, is wholly unconnected with the 'Teut-' in 'theod-iscus' and Deut-sch. This is fully shown by Grimm in his dissertation on the words German and Dutch. In its oldest form the latter word meant 'popular,' 'national,' 'vernacular'; it was an adjective applied to the 'vulgar tongue,' or the vernacular German, in opposition to the Latin. In the tenth century the secondary form 'Teut-onicus' came in vogue even with German writers. Whether this arose out of imitation of the Latin form 'Romanice,' or out of the idea of an historical connection with the Teutones of the classics, is immaterial. It is clear that the present word 'Deut-sch' proves nothing respecting the Teutones. Perhaps, however, as early as the time of Martial the word 'Teutonicus' was used in a general sense, denoting the Germans in general. Certain it is that, before his time, it meant the particular people conquered by Marius, irrespective of origin or locality."—R. G. Latham, *The Germany of Tacitus, app.* 3.

TEUTONIC KNIGHTS OF THE HOSPITAL: The founding of the order.—"It is not possible to find the exact date of the foundation of the Teutonic Order, but it was probably about A. D. 1190 that it received its full organization as one of the recognized Religious Military Orders. Its actual commencement, like that of the other Orders, was obscure and humble. About 1128 or 1129, a wealthy German, who had taken part in the siege and capture of Jerusalem, settled there with his wife, intending to spend the remainder of his life in the practice of religion and in visiting the holy places. His attention and interest were soon excited by the misfortunes of his poorer countrymen, who came in great numbers as pilgrims to Jerusalem. Many fell sick, and endured great miseries and hardships. Moved with compassion, he received some of the more distressing cases into his own house. But he soon found that the work grew beyond this, and he built a hospital, with a chapel dedicated to the Blessed Virgin. In this institution he passed the whole of his time, nursing the sick pilgrims; and to their maintenance he devoted the whole of his means." One by one, others of his countrymen joined the pious German in his benevolent work, and "banded themselves together after the pattern of the Order of St. John of Jerusalem, and united the care of the sick and poor with the profession of arms in their defence, under the title of Hospitallers of the Blessed Virgin. This little band put themselves under the direction of the Grand Prior of the Hospitallers of St. John of Jerusalem, although they did not actually join this Order, whose operations they so closely imitated. . . . It was, however, during the siege of Acre [A. D. 1189–1191] that the Teutonic Order received its final and complete organization as one of the great Military Religious Orders of Europe." At Acre, the Hospitallers of the Blessed Virgin, then driven from Jerusalem by Saladin's conquest, joined certain citizens of Bremen and Lubeck in providing a field-hospital for the wounded and sick, and in their new sphere of labor they acquired the designation of the Teutonic Knights of the Hospital of the Blessed Virgin at Jerusa-

lem. "It is said that the Order owed its constitution to Frederick, Duke of Suabia; but there is much obscurity, and little authentic record to determine this or to furnish particulars of the transaction. The Order seems, however, to have been confirmed by Pope Celestine III."—F. C. Woodhouse, *Military Religious Orders, pt.* 3, *ch.* 1.

A. D. 1819-1835.—Relinquishment of American claims to Spain.—Condition as a Mexican province.—Encouragement of immigration from the United States and Europe.—"By the treaty of 1819 with Spain for the cession of the Floridas, the United States relinquished all claim to the western portion of Louisiana lying south of Red River and west of the Sabine [see FLORIDA: A. D. 1819-1821; and LOUISIANA: A. D. 1798-1803]. After the final ratification of that treaty by both governments, and the cession and delivery of the Floridas to the United States, the Spaniards took formal possession of the country west of the Sabine, and erected it into the 'Province of Texas,' under the authority and jurisdiction of the Viceroy of Mexico. From that time the Sabine River was the western boundary of the United States, near the Gulf of Mexico. The province of Texas at this time was occupied by the native tribes of savages, interrupted only by a few Spanish settlements. . . . The whole population, including some settlements in the vicinity of the sea-coast, scarcely exceeded 5,000 souls, of whom the greater portion were the remains of old colonies formed during the Spanish dominion over the province of Louisiana. Each principal settlement, from San Antonio de Bexar to Nacogdoches, was placed under the government of a military commandant, who exercised civil and military authority within the limits of his presidio. . . . Such was the province of Texas under the Spanish monarchy until the year 1821, when Mexico became an independent nation. . . . On the 24th of October, 1824, the Mexican States adopted a Republican form of government, embracing 'a confederation of independent states,' known and designated as the 'United States of Mexico.' In this confederation the departments of Texas and Coahuila were admitted as one state, and were jointly represented in the Congress of Mexico. Soon after the establishment of independence in the United States of Mexico, the colonization and settlement of Texas became a favorite subject of national policy with the new government. To attract population for the settlement of the country, colonization laws were enacted, to encourage enterprising individuals from foreign countries to establish large colonies of emigrants within the limits of Texas. Under the provisions of these laws enterprise was awakened in the United States and in some portions of Europe. Founders of colonies, or 'Empresarios,' were induced to enter into engagements for the occupancy and settlement of large tracts of country, designated in their respective 'grants'; the extent of the grant being proportionate to the number of colonists to be introduced. The first grant was made to Moses Austin, a native of Durham, Connecticut, in 1821, and under its provisions he was required by the Mexican authorities to introduce 300 families from the United States. This enterprising man, having departed from Bexar for the introduction of his colony, died on his journey through the wilderness, leaving his plans of colonization to be prosecuted by his son, Colonel Stephen F. Austin, who possessed the talents, energy, and judgment requisite for the arduous undertaking. Having succeeded to his father's enterprise, he subsequently acquired more influence with the Mexican government than any other 'empresario' in the province. . . . But a few years had elapsed when nearly the whole area of the department of Texas had been parceled out into extensive grants for settlement by the different 'empresarios' with their colonies. . . . Emigration from the United States, as well as from Great Britain and Ireland, continued to augment the population in all the departments until the year 1834, when political troubles began to convulse the Mexican Republic." In 1835 "the whole Anglo-American population of Texas was about 20,000; of this number General Austin's colony comprised no less than 13,000, or more than half the entire population. These were chiefly emigrants from the United States. . . . The Mexicans within the limits of Texas at this period scarcely exceeded 3,000, most of whom resided in the vicinity of Bexar."—J. W. Monette, *Discovery and Settlement of the Mississippi Valley, v.* 2, *pp.* 569-572.

A. D. 1824-1836.—The introduction of Slavery.—Schemes of the Slave Power in the United States. — Revolutionary movement under Houston.—Independence of Mexico declared, and practically won at San Jacinto.—The American settlers in Texas "brought their slaves with them, and continued to do so notwithstanding a decree of the Mexican Congress, issued in July, 1824, which forbade the importation into Mexican territory of slaves from foreign countries, and notwithstanding the Constitution adopted the same year, which declared free all children thereafter born of slaves. About that time the slave-holders in the United States began to see in Texas an object of peculiar interest to them. The Missouri Compromise, admitting Missouri as a Slave State and opening to slavery all that part of the Louisiana purchase south of 36° 30′, seemed at first to give a great advantage to the slave power. But gradually it became apparent that the territory thus opened to slavery was, after all, too limited for the formation of many new Slave States, while the area for the building up of Free States was much larger. More territory for slavery was therefore needed to maintain the balance of power between the two sections. At the same time the Mexican government, growing alarmed at the unruly spirit of the American colony in Texas, attached Texas to Coahuila, the two to form one state. The constitution of Coahuila forbade the importation of slaves; and in 1829 the Republic of Mexico, by the decree of September 15, emancipated all the slaves within its boundaries. Then the American Slave States found themselves flanked in the southwest by a power not only not in sympathy with slavery, but threatening to become dangerous to its safety. The maintenance of slavery in Texas, and eventually the acquisition of that country, were thenceforth looked upon by the slaveholding interest in this Republic as matters of very great importance, and the annexation project was pushed forward systematically. First the American settlers in Texas refused to obey the Mexican decree of emancipation, and, in order to avoid an insurrection, the Mexican authorities permitted it to be understood that the decree did not embrace Texas. Thus one point was gained. Then the Southern press vigorously agitated the necessity of enlarging the area of slavery, while an interest in the North was created by organizing three land companies in New York, which used pretended Mexican land grants in Texas as the basis of issues of stock, promising to make people rich over-night, and thus drawing Texas within the circle of American business speculation. In 1830 President Jackson made another attempt to purchase Texas [Henry Clay, in 1827, when Secretary of State under John Quincy Adams, had already made a proposal to the Mexican government for the purchase], offering five millions, but without success. The Mexican government, scenting the coming danger, prohibited the immigration of Americans into Texas. This, however, had no effect. The American colony now received a capable and daring leader in Sam Houston of Tennessee, who had served with General Jackson in the Indian wars. He went to Texas for the distinct object of wresting that country from Mexico. There is reason for believing that President Jackson was not ignorant of his intentions. Revolutionary convulsions in Mexico gave the American colonists welcome opportunities for complaints, which led to collisions with the Mexican authorities. General Santa Anna, who by a successful revolutionary stroke had put himself at the head of the Mexican government, attempted to reduce the unruly Americans to obedience. In 1835 armed conflicts took place, in which the Americans frequently had the advantage. The Texans declared their independence from Mexico on March 2, 1836. The declaration was signed by about 60 men, among whom there were only two of Mexican nationality. The constitution of the new republic confirmed the existence of slavery under its jurisdiction, and surrounded it with all possible guaranties. Meanwhile Santa Anna advanced at the head of a Mexican army to subdue the revolutionists. Atrocious butcheries marked the progress of his soldiery. On March 6 the American garrison [250 men] of the Alamo [a mission church at San Antonio de Bexar] was massacred, and on the 27th a large number [500] of American prisoners at Goliad met a like fate. These atrocities created a great excitement in the United States. But on April 21 the Texans under Houston, about 800 strong, inflicted a crushing defeat upon Santa Anna's army of 1,500 men, at San Jacinto, taking Santa Anna himself prisoner. The captive Mexican President concluded an armistice with the victorious Texans, promising the evacuation of the country, and to procure the recognition of its independence; but this the Mexican Congress refused to ratify. The government of the United States maintained, in appearance, a neutral position. President Jackson had indeed instructed General Gaines to march his troops into Texas, if he should see reason to apprehend Indian incursions. Gaines actually crossed the boundary line, and was recalled only after the Mexican Minister at Washington had taken his passports. The organization of reinforcements for Houston, however, had been suffered to proceed on American soil without interference."—C. Schurz, *Life of Henry Clay, ch.* 17 (*v.* 2).

A. D. 1836-1845.—Eight years of independence.— Annexation to the United States.— The question in Congress and the country.—"Santa Anna, . . . constrained in his extremity to acknowledge the independence of Texas, . . . was liberated, and the new republic established in October, 1836, with a Constitution modeled on that of the United States, and with General Houston inaugurated as its first President. The United States forthwith acknowledged its independence. In less than a year application was made to the United States government to receive the new republic into the Union, and, though this was at the time declined, it was obvious that the question was destined to play a most important part in American civil policy. The North saw in the whole movement a predetermined attempt at the extension of slavery, and in the invasive emigration, the revolt, the proclamation of independence, the temporary organization of a republic, and the application to be admitted into the Union as a state, successive steps of a conspiracy which would, through the creation of

half a dozen or more new states, give a preponderance to the slave power in the republic. Mr. Van Buren, who had declined the overtures for the annexation of Texas, was succeeded in the Presidency by General Harrison, who, dying almost immediately after his inauguration, was followed by the Vice President, Mr. Tyler, a Virginian, and a supporter of extreme Southern principles. The annexation project was now steadily pressed forward, but, owing to the difficult circumstances under which Mr. Tyler was placed, and dissensions arising in the party that had elected him, nothing decisive could be done until 1844, when Mr. Upshur, the Secretary of State, being accidentally killed by the bursting of a cannon, Mr. Calhoun succeeded him. A treaty of annexation was at once arranged, but, on being submitted to the Senate, was rejected. Undiscouraged by this result, the South at once determined to make annexation the touchstone in the coming Presidential election. . . . Mr. Van Buren and Mr. Clay, the prominent candidates of the two opposing parties for the Presidency, were compelled to make known their views previously to the meeting of the nominating Conventions," and both discountenanced annexation. Van Buren was accordingly defeated in the Democratic Convention and James K. Polk received the nomination. Clay was nominated by the Whigs, and made an attempt, in the succeeding canvass, to change his ground on the Texas question; but "his attempt only served to make the matter worse, and cost him the support of the anti-slavery party, whose votes would have elected him." Polk was chosen President; but the annexation of Texas did not wait for his inauguration. "On December 19th a joint resolution was introduced into the House of Representatives providing for annexation. Attempts were made to secure half the country for free labor, the other half being resigned to slavery. . . . This proposition was, however, defeated. . . . As the measure eventually stood, it made suitable provision for the mode in which the 'State of Texas' should be admitted into the Union, the disposal of its munitions of war, public property, unappropriated lands, debts. On the main point it was arranged that new states, not exceeding four in number, in addition to Texas proper, should subsequently be made out of its territory, those lying south of latitude 36° 30′ to be admitted with or without slavery, as their people might desire; in those north of that line, slavery to be prohibited. Mr. Tyler, on the last day of his term of office, unwilling to leave to his successor, Mr. Polk, the honor of completing this great Southern measure, dispatched a swift messenger to Texas; her assent was duly secured, and the Mexican province became a state of the Union. But the circumstances and conditions under which this had been done left a profound dissatisfaction in the North. The portion of territory ceded to freedom did not belong to Texas; her boundary did not approach within 200 miles of the Missouri Compromise line. The South had therefore secured the whole of the new acquisition; she had seized the substance, and had deluded the North with a shadow."—J. W. Draper, *Hist. of the Am. Civil War*, *v.* 1, *ch.* 22.

THANKSGIVING DAY, The American: Its origin.—"The Pilgrims [at Plymouth], fond as they were of social enjoyment, had since landing known no day of rest except the sacred day of worship. Now [in 1621, the year after their landing from the Mayflower] that the summer was past and the harvest ended, they determined to have a period of recreation, combined with thanksgiving for their many mercies. The Governor thereupon sent out four huntsmen, who in one day secured enough game to supply the Colony for nearly a week. Hospitality was extended to Massasoit, who accepted and brought ninety people with him. The guests remained three days, during which they captured five deer to add to the larder of their hosts. The motley company indulged in a round of amusements, and the Colonists entertained their visitors with military tactics and evolutions. Without doubt, religious services opened each day; for the Pilgrims were cheerful Christians, who carried religion into all their affairs. Thus heartily and royally was inaugurated the great New England festival of Thanksgiving. For two centuries it continued to be a peculiarity of the Eastern States; but it has now become national, its annual return finding a welcome along the Lake shore and the Gulf, and from the Atlantic to the

Pacific. . . . In 1623 a public day of Thanksgiving is noticed; and one is mentioned in a letter of 1632. . . . I do not doubt that such a religious festival was held after every harvest, and that it was so much a matter of course that the records did not mention it any more than they did the great training-day, with its sermon and holiday features."—J. A. Goodwin, *The Pilgrim Republic, pp.* 179–180, *and foot-note.*

THEATINES, The.—The founders of the Order of the Theatines (1524) were "Gaetano of Thiene, a native of Vicenza, and Gian Pietro Caraffa [afterwards Pope Paul IV.]. The former had quitted a lucrative post at the Roman court in order to transplant the ideas of the Oratory of the Divine Love to his native city, Venice, and Verona, and had gradually come to concentrate his pious thoughts upon the reformation of the secular clergy of the Church. On his return to Rome, Bonifacio da Colle, a Lombard lawyer, became interested in his design, and then it was enthusiastically taken up by Caraffa, whose bishopric of Chieti, or, according to the older form, Theate, gave its name to the new order of the Theatines."—A. W. Ward, *The Counter-Reformation, p.* 28.—"To the vow of poverty they made the special addition that not only would they possess nothing, but would even abstain from begging, and await the alms that might be brought to their dwellings. . . . They did not call themselves monks, but regular clergy—they were priests with the vows of monks. Their intention was to establish a kind of seminary for the priesthood. . . . They devoted themselves rigidly to their clerical duties—to preaching, the administration of the sacraments, and the care of the sick. . . . The order of the Theatines did not indeed become a seminary for priests precisely, its numbers were never sufficient for that; but it grew to be a seminary for bishops, coming at length to be considered the order of priests peculiar to the nobility."—L. Ranke, *Hist. of the Popes, bk.* 2, *sect.* 3 (*v.* 1).

THEBAIS, The.—The southern district of Upper Egypt, taking its name from Thebes.

THEBES, Egypt.—"No city of the old world can still show so much of her former splendour as Egyptian Thebes. . . . Not one of the many temples of Thebes has wholly disappeared; some are almost complete; many of the royal and private tombs were, until the tourist came, fresh with colours as of yesterday. . . . The origin of the great city is obscure. Unlike Memphis, Thebes, her southern rival, rose to the headship by slow degrees. It was towards the close of the dark age marked by the rule of Hanes, that a new line of kings arose in the upper country, with Thebes for their capital. At first they were merely nobles; then one became a local king, and his successors won the whole dominion of Egypt. These were the sovereigns of the Eleventh Dynasty. Their date must be before Abraham, probably some centuries earlier. . . . Thebes, like the other cities of Egypt, had a civil and a religious name. The civil name was Apiu, 'the city of thrones,' which, with the article 't' or 'ta,' became Ta-Apiu, and was identified by the Greeks with the name of their own famous city, by us corruptly called Thebes. The sacred name was Nu-Amen, 'the city of Amen,' the god of Thebes; or simply Nu, 'the city,' and Nu-ā, 'the great city.' In these names we recognize the No-Amon and No of Scripture."—R. S. Poole, *Cities of Egypt, ch.* 4.—See, also, EGYPT: THE OLD EMPIRE AND THE MIDDLE EMPIRE.

THEBES, Greece: The founding of the city.—"In the fruitful plain, only traversed by low hills, which stretches from the northern declivity of Mount Cithæron to the Bœotian lakes opposite the narrowest part of the sound which separates Eubœa from the mainland, in the 'well-watered, pasture-bearing region of the Aones,' as Euripides says, lay the citadel and town of Thebes. According to Greek tradition, it was built by Cadmus the Phœnician. The Aones, who inhabited the country, are said to have amalgamated with the Phœnicians whom Cadmus brought with him, into one people. The citadel lay on a hill of moderate height between the streams Ismenus and Dirce; it bore even in historical times the name Cadmea; the ridge to the north of the town was called Phœnicium, i. e. mountain of the Phœnicians. In the story of Cadmus and Europa, Greek legend relates the Phœnician mythus of Melkarth and Astarte. In order to seek the lost goddess of the moon, Astarte, Cadmus-Melkarth, the wandering sun-god, sets forth. He finds her in the far west, in Bœotia, and here in Thebes, on the Cadmea, celebrates the holy marriage. . . . There are a few relics of the wall of the citadel of Cadmea, principally on the north side; they are great blocks, not quite regularly hewn. Of the city wall and the famous seven gates in it nothing remains; even this number seven points to the Phœnicians as well as the designations which were retained by these gates even in historical times. The Electric gate belonged to the sun-god Baal, called by the Greeks Elector; the Neitic gate, it would seem, to the god of war. . . . The gate Hypsistia was that of

Zeus Hypsistos, whose shrine stood on the Cadmea; . . . the Prœtidic gate belonged to Astarte, whose domain was the moon; the Oncæic gate in the north-west belonged to Athena Onca, who is expressly called a Phœnician goddess. . . . It is probable that the two remaining gates, the Homoloic and the Crenaic, were also dedicated to gods of this circle — to the spirits of planets. According to Greek legend, Cadmus invented the building of walls, mining, armour, and letters. Herodotus contents himself with saying that the Phœnicians who came with Cadmus taught much to the Greeks, even writing: from the Phœnicians the Ionians, in whose midst they lived, had learned letters. If even this early borrowing of writing on the part of the Greeks is incorrect, all the other particulars, — the legend of Cadmus, which extends to the Homeric poems, where the inhabitants of Thebes are called Cadmeans; the rites of the Thebans; the walls and gates, — taken together, give evidence that the Phœnicians went over from Eubœa to the continent, and here fixed one of their most important and lasting colonies upon and around the hill of Cadmea."—M. Duncker, *Hist. of Greece, bk.* 1, *ch.* 4.—See, also, Bœotia.

B. C. 378.—The Sacred Band.—"This was an institution connecting itself with earlier usages of the land. For already in the battle of Delium a band of the Three Hundred is mentioned, who fought, like the heroes of the Homeric age, associated in pairs, from their chariots in front of the main body of the soldiery. This doubtless very ancient institution was now [B. C. 378] revived and carried out in a new spirit under the guidance of Epaminondas and Gorgidas. They had quietly assembled around them a circle of youths, with whom they had presented themselves before the community on the day of the Liberation, so that they were regarded as the founders of the Sacred Band of Thebes. It was now no longer a privilege of the nobility to belong to the Three Hundred; but those among the youth of the land who were in feeling the noblest and most high-minded, and who already under the oppression of the Tyrants had been preparing themselves for the struggle for freedom, were henceforth the elect and the champions. It was their duty to stimulate the rest eagerly to follow their example of bravery and discipline; they were associated with one another by the bonds of friendship and by identity of feelings. . . . A soldier-like spirit was happily blended with ethical and political points of view, and ancient national usage with the ideas of the present and with Pythagorean principles; and it constitutes an honorable monument of the wisdom of Epaminondas."—E. THEOPHILUS, Emperor in the East, (Byzantine, or Greek), A. D. 829–842.

THEORI.—The name of Theori, among the ancient Greeks, "in addition to its familiar signification of spectators at the theatre and public ambassadors to foreign sanctuaries and festivals, was specially applied to certain public magistrates, whose function it was to superintend and take charge of religious affairs in general, though they often possessed along with this some more extensive political power."—G. Schömann, *Antiq. of Greece: The State, pt.* 2, *ch.* 5.

THEORICON, The.—"By means of the Theoricon . . . , the most pernicious issue of the age of Pericles, there arose in a small free state [Athens] a lavish expenditure, which was relatively not less than in the most voluptuous courts, and which consumed large sums, while the wars were unsuccessful for the want of money. By it is understood the money which was distributed among the people for the celebration of the festivals and games, partly to restore to the citizens the sum required for their admission into the theatre, partly to enable them to procure a better meal. In part it was expended for sacrifices, with which a public feast was connected. . . . The superintendents of the theoricon were not called treasurers; but they evidently had a treasury. Their office was one of the administrative offices of the government, and indeed of the most eminent. They were elected by the assembly of the people through cheirotonia. Their office seems to have been annual. Their number is nowhere given. Probably there were ten of them, one from each tribe. . . . The Athenian people was a tyrant, and the treasury of the theorica its private treasury."—A. Boeckh, *Public Economy of Athens* (*tr. by Lamb*), *bk.* 2, *ch.* 7; *also ch.* 13.

THEOW.—"In the earliest English laws . . . slaves are found; the 'theow' [from the same root as 'dienen,' to serve] or slave simple, whether 'wealh'—that is, of British extraction, captured or purchased—or of the common German stock descended from the slaves of the first colonists; the 'esne' or slave who works for hire; the 'wite-theow' who is reduced to slavery because he cannot pay his debts."—W. Stubbs, *Const. Hist. of Eng., ch.* 5, *sect.* 37.

THERA.—The ancient name of the Greek island of Santorin, one of the Sporades, whose inhabitants were enterprising navigators, and weavers and dyers of purple stuffs. They are said to have founded Cyrene, on the north African coast.—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 3.—See CYRENAICA.

THERMÆ.—"The Roman thermæ were a combination on a huge scale of the common balneæ with the Greek gymnasia. Their usual form was that of a large quadrangular space, the sides of which were formed by various porticos, exedræ, and even theatres for gymnastic and literary exercises, and in the centre of which stood a block of buildings containing the bath rooms and spacious halls for undergoing the complicated process of the Roman warm bath. The area covered by the whole group of buildings was, in many cases, very large. The court of the Baths of Caracalla enclosed a space of 1,150 feet on each side, with curvilinear projections on two sides. The central mass of building was a rectangle, 730 feet by 380. . . . The other great Imperial thermæ of Rome, those of Nero, Titus, Domitian, Diocletian, and Constantine, were probably upon the same plan as the Thermæ Caracallæ. All were built of brick, and the interior was decorated with stucco, mosaics, or slabs of marble, and other ornamental stones. . . . The public balneæ, as distinct from thermæ, . . . were used simply as baths, and had none of the luxurious accessories attached to them which were found in the courts of the great thermæ."—R. Burn, *Rome and the Campagna, introd.*

THESSALONICA.—Therma, an unimportant ancient city of Macedonia, received the name of Thessalonica, about 315 B. C., in honor of the sister of Alexander the Great, who married Cassander. Cassander gave an impetus to the city which proved lasting. It rose to a high commercial rank, acquired wealth, and became, under the Romans, the capital of the Illyrian provinces.

A. D. 390.—Massacre ordered by Theodosius.—A riotous outbreak at Thessalonica, A. D. 390, caused by the imprisonment of one of the popular favorites of the circus, was punished by the Emperor Theodosius in a manner so fiendish that it seems wellnigh incredible. He caused the greatest possible number of the inhabitants to be invited, in his name, to witness certain games in the circus. "As soon as the assembly was complete, the soldiers, who had secretly been posted round the circus, received the signal, not of the races, but of a general massacre. The promiscuous carnage continued three hours,

without discrimination of strangers or natives, of age or sex, of innocence or guilt; the most moderate accounts state the number of the slain at 7,000; and it is affirmed by some writers that more than 15,000 victims were sacrificed. . . . The guilt of the emperor is aggravated by his long and frequent residence at Thessalonica."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 27.

A. D. 904.—Capture and pillage by the Saracens.—The capture of Thessalonica by a piratical expedition from Tarsus, A. D. 904, was one of the most terrible experiences of its kind in that age of blood and rapine, and one of which the fullest account, by an eye-witness and sufferer, has come down to posterity. The wretched inhabitants who escaped the sword were mostly sold into slavery, and the splendid city — then the second in the Byzantine Empire — was stripped of all its wealth. The defense of the place had been neglected, with implicit dependence on the goodwill and the power of St. Demetrius.—G. Finlay, *Hist. of the Byzantine Empire, from* 716 *to* 1057, *bk.* 2, *ch.* 1, *sect.* 2.

A. D. 1430.—Capture by the Turks.—Thessalonica, feebly defended by Venetians and Greeks, was taken by the Turks, under Amurath II., in February, 1430. "'The pillage and the carnage,' relates the Greek Anagnosta, an eye-witness of this disastrous night, 'transcended the hopes of the Turks and the terror of the Greeks. No family escaped the swords, the chains, the flames, the outrages of the Asiatics fierce for their prey. At the close of the day, each soldier drove like a herd before him, through the streets of Salonica, troops of women, of young girls, of children, of caloyers and anchorites, of monks of all the monasteries. Priests were chained with virgins, children with old men, mothers with their sons, in derision of age, of profession, of sex, which added a barbarous irony to nudity and death itself.'"—A. Lamartine, *Hist. of Turkey, bk.* 10, *sect.* 27.

THESSALY. — "The northern part of Greece is traversed in its whole length by a range of mountains, the Greek Apennines, which issue from the same mighty root, the Thracian Scomius, in which Hæmus, and Rhodopé and the Illyrian Alps likewise meet. This ridge first takes the name of Pindus, where it intersects the northern boundary of Greece, at a point where an ancient route still affords the least difficult passage from Epirus into Thessaly. From Pindus two huge arms stretch towards the eastern sea and enclose the vale of Thessaly, the largest and richest plain in Greece: on the north the Cambunian Hills, after making a bend towards the south, terminate in the loftier heights of Olympus, which are scarcely ever entirely free from snow; the opposite and lower chain of Othrys parting, with its eastern extremity, the Malian from the Pagasæan Gulf, sinks gently towards the coast. A fourth rampart, which runs parallel to Pindus, is formed by the range which includes the celebrated heights of Pelion and Ossa; the first a broad and nearly even ridge, the other towering into a steep and conical peak, the neighbour and rival of Olympus, with which, in the songs of the country, it is said to dispute the pre-eminence in the depth and duration of its snows. The mountain barrier with which Thessaly is thus encompassed is broken only at the northeast corner by a deep and narrow cleft, which parts Ossa from Olympus; the defile so renowned in poetry as the vale, in history as the pass, of Tempe. The imagination of the ancient poets and declaimers delighted to dwell on the natural beauties of this romantic glen and on the sanctity of the site, from which Apollo had transplanted his laurel to Delphi. . . . South of this gulf [the Gulf of Pagasæ], the coast is again deeply indented by that of Malia, into which the Spercheius, rising from Mount Tymphrestus, a continuation of Pindus, winds through a long, narrow vale, which, though considered as a part of Thessaly, forms a separate region, widely distinguished from the rest by its physical features. It is intercepted between Othrys and Œta, a huge, rugged pile, which stretching from Pindus to the sea at Thermopylæ, forms the inner barrier of Greece, as the Cambunian range is the outer, to which it corresponds in direction and is nearly equal in height. From Mount Callidromus, a southern limb of Œta, the same range is continued without interruption, though under various names and different degrees of elevation, along the coast of the Eubœan Sea. . . . Another branch, issuing from the same part of Pindus, connects it with the loftier summits of Parnassus, and afterward skirting the Corinthian Gulf under the names of Cirphis and Helicon, proceeds to form the northern boundary of Attica under those of Cithæron and Parnes."—C. Thirlwall, *Hist. of Greece, ch.* 1 (*v.* 1).—In the mythical legends of Greece, Thessaly was the kingdom of Hellen, transmitted to his son Æolus and occupied originally by the Æolic branch of the Hellenic family. The Æolians, however, appear to have receded from the rich Thessalian plain, into Bœotia and elsewhere, before various invading tribes. The people who fixed their name, at last, upon the country, the Thessalians, came into it from Epirus, crossing the Pindus mountain-range.—See, also, Greece: The Migrations; and Dorians and Ionians.

THING.—THINGVALLA.—ALTHING.—"The judicial and legislative assembly of the Northmen represented by the word 'thing' (from 'tinga'=to speak, and allied to our English word 'think') can be traced in many local names throughout England, and more especially in the extreme North, where the Scandinavian race prevailed, and where the 'thing' was primitively held upon the site of, or as an appanage to, a 'hof' or temple. It is plainly seen in the Tynwald Court or general legislative assembly for the Isle of Man, where the distinctive feature of the primitive open-air assembly still survives in the custom of the whole assembly going once a year in solemn procession, attended by the governor of the island and a military escort, to a hill known as the Tynwald Hill, whence all the laws that have been passed in the course of the past year are proclaimed in English and Manx. . . . In Norway there is an 'Al-thing' or general assembly, and four district 'things' for the several provinces, as well as a Norwegian Parliament familiar to us as 'Stor-thing' or great council."—R. R. Sharpe, *Introd. to Calendar of Wills, Court of Husting, London, v.* 1.—"By the end of the period of the first occupation of Iceland, a number of little kingdoms had been formed all round the coast, ruled by the priests, who, at stated times, convened their adherents and retainers to meetings for the settlement of matters which concerned any or all of them. These were called 'Things'—meetings, i. e. Mot-things. Each was independent of the other, and quarrels between the members of two separate Things could only be settled as the quarrels of nations are settled, by treaty or war. But the time soon arrived when the progress of political thought began to work upon this disjointed constitution; and then amalgamation of local Things into an Althing, of local jurisdiction into a commonwealth jurisdiction, was the historical result. . . . The Thingvalla, or Thing-field itself, was a vast sunken plain of lava, about four miles broad and rather more than four miles deep, lying with a dip or slope from north-east to south-west, between two great lips or furrows. A stream called Öxará, (Axewater) cuts off a rocky portion of the plain, so as almost to form an island. This is the famous Hill of Laws, or Lögberg, which was the heart of the Icelandic body politic. . . . This example of the Icelandic Thing is the most perfect that is known to history."—G. L. Gomme, *Primitive Folk-Moots, ch.* 2.

THRACIANS, The.—"That vast space comprised between the rivers Strymon and Danube, and bounded to the west by the easternmost Illyrian tribes, northward of the Strymon, was occupied by the innumerable subdivisions of the race called Thracians, or Threïcians. They were the

most numerous and most terrible race known to Herodotus: could they by possibility act in unison or under one dominion (he says) they would be irresistible. . . . Numerous as the tribes of Thracians were, their customs and character (according to Herodotus) were marked by great uniformity: of the Getæ, the Trausi, and others, he tells us a few particularities. . . . The general character of the race presents an aggregate of repulsive features unredeemed by the presence of even the commonest domestic affections. . . . It appears that the Thynians and Bithynians, on the Asiatic side of the Bosphorus, perhaps also the Mysians, were members of this great Thracian race, which was more remotely connected, also, with the Phrygians. And the whole race may be said to present a character more Asiatic than European; especially in those ecstatic and maddening religious rites, which prevailed not less among the Edonian Thracians than in the mountains of Ida and Dindymon of Asia, though with some important differences. The Thracians served to furnish the Greeks with mercenary troops and slaves."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 26.—"Under Seuthes [B. C. 424—] Thrace stood at the height of its prosperity. It formed a connected empire from Abdera to the Danube, from Byzantium to the Strymon. . . . The land abounded in resources, in corn and flocks and herds, in gold and silver. . . . No such state had as yet existed in the whole circuit of the Ægean. . . . But their kingdom failed to endure. After Seuthes it broke up into several principalities."—E. Curtius, *Hist. of Greece, bk.* 7, *ch.* 1.—"Herodotus is not wrong in calling the Thracians the greatest of the peoples known to him after the Indians. Like the Illyrian, the Thracian stock attained to no full development, and appears more as hard-pressed and dispossessed than as having any historically memorable course of its own. . . . The Thracian [language] disappeared amidst the fluctuations of peoples in the region of the Danube and the overpowerful influence of Constantinople, and we cannot even determine the place which belongs to it in the pedigree of nations. . . . Their wild but grand mode of worshipping the gods may perhaps be conceived as a trait peculiar to this stock—the mighty outburst of the joy of spring and youth, the nocturnal mountain-festivals of torch-swinging maidens, the intoxicating sense-confusing music, the flowing of wine and the flowing of blood, the giddy festal whirl, frantic with the simultaneous excitement of all sensuous passions. Dionysos, the glorious and the terrible, was a Thracian god." Under the supremacy of the Romans, the Thracians were governed by a native line of vassal kings, reigning at Bizye (Wiza), between Adrianople and the coast of the Black Sea, until the Emperor Claudius, A. D. 46, suppressed the nominal kingdom and made Thrace a Roman province.—T. Mommsen, *Hist. of Rome, bk.* 8, *ch.* 6.—In the 8th and 9th centuries, "the great Thracian race, which had once been inferior in number only to the Indian, and which, in the first century of our era, had excited the attention of Vespasian by the extent of the territory it occupied, had . . . almost disappeared. The country it had formerly inhabited was peopled by Vallachian and Sclavonian tribes."—G. Finlay, *Hist. of the Byzantine Empire, bk.* 1, *ch.* 1, *sect.* 1.

THREE CHAPTERS, The dispute of the.—A famous church dispute raised in the sixth century by the Emperor Justinian, who discovered an heretical taint in certain passages, called the Three Chapters, culled out of the works of Theodore of Mopsuestia and two other doctors of the church who had been teachers and friends of Nestorius. A solemn Church Council called (A. D. 553) at Constantinople—the fifth general Council—condemned the Three Chapters and anathematized their adherents. But this touched by implication the decrees of the Council of Chalcedon, which were especially cherished in the Latin Church, and Rome became rebellious. In the end, the Roman opposition prevailed, and, "in the period of a century, the schism of the three chapters expired in an obscure angle of the Venetian province."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 47.

THULE.—Pytheas, a Greek traveller and writer of the time (as supposed) of Alexander the Great, was the first to introduce the name of Thule into ancient geography. He described it vaguely as an island, lying six days' voyage to the north of Britain, in a region where the sea became like neither land nor water, but was of a thick and sluggish substance, resembling that of the jelly fish. "It appears to me impossible to identify the Thule of Pytheas with any approach to certainty; but he had probably heard vaguely of the existence of some considerable island, or group of islands, to the north of Britain, whether the Orkneys or the Shetlands it is impossible to say."—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 15, *sect.* 2, *foot-note.*—Some modern writers identify Thule with Iceland; some with the coast of Norway, mistakenly regarded as an island. But, whichever land it may have been, Thule to the Greeks and Romans, was Ultima Thule,—the end of the known world,—the most northerly point of Europe to which their knowledge reached.—R. F. Burton, *Ultima Thule, introd., sect.* 1 (*v.* 1).

THUNDERING LEGION, The.—During the summer of the year 174, in a campaign which the Emperor Marcus Aurelius Antoninus conducted against the Quadi, on the Danube, the Roman army was once placed in a perilous position. It was hemmed in by the enemy, cut off from all access to water, and was reduced to despair. At the last extremity, it is said, the army was saved by a miraculous storm, which

poured rain on the thirsty Romans, while lightning and hail fell destructively in the ranks of the barbarians. According to the Pagan historians, Aurelius owed this "miraculous victory," as it was called, to the arts of one Arnuphis, an Egyptian magician. But later Christian writers told a different story. They relate that the distressed army contained one legion composed entirely of Christians, from Melitene, and that these soldiers, being called upon by the emperor to invoke their God, united in a prayer which received the answer described. Hence, the legion was known thereafter, by imperial command, as the Thundering Legion.—P. B. Watson, *Marcus Aurelius Antoninus, ch.* 5.

THURII.—THURIUM. See SIRIS.

THURINGIA.—THURINGIANS, The.—"To the eastward of the Saxons and of the Franks, the Thuringians had just formed a new monarchy. That people had united to the Varni and the Heruli, they had spread from the borders of the Elbe and of the Undstrut to those of the Necker. They had invaded Hesse or the country of the Catti, one of the Frankish people, and Franconia, where they had distinguished their conquests by frightful cruelties. . . . It is not known at what period these atrocities were committed, but Thierri [or Theoderic, one of the four Frank kings, sons of Clovis] towards the year 528, reminds his soldiers of them to excite their revenge; it is probable that they were the motives which induced the Franks of Germany and those of Gaul to unite, in order to provide more powerfully for their defence." Thierry, the Frank king at Metz, and Clotaire, his brother, who reigned at Soissons, united in 528 against the Thuringians and completely crushed them. "This great province was then united to the monarchy of the Franks, and its dukes, during two centuries, marched under the standards of the Merovingians."—J. C. L. S. de Sismondi, *The French under the Merovingians, ch.* 6.

TIBET.—"The name of Tibet is applied not only to the south-west portion of the Chinese Empire, but also to more than half of Kashmîr occupied by peoples of Tibetan origin. These regions of 'Little Tibet' and of 'Apricot Tibet'—so called from the orchards surrounding its villages—consist of deep valleys opening like troughs between the snowy Himalayan and Karakorum ranges. Draining towards India, these uplands have gradually been brought under Hindu influences, whereas Tibet proper has pursued a totally different career. It is variously known as 'Great,' the 'Third,' or 'East Tibet'; but such is the confusion of nomenclature that the expression 'Great Tibet' is also applied to Ladak, which forms part of Kashmîr. At the same time, the term Tibet itself, employed by Europeans to designate two countries widely differing in their physical and political conditions, is unknown to the people themselves. Hermann Schlagintweit regards it as an old Tibetan word meaning 'strength,' or 'empire' in a pre-eminent sense and this is the interpretation supplied by the missionaries of the seventeenth century, who give the country the Italian name of Potente, or 'Powerful.' But however this be, the present inhabitants use the term Bod-yul alone; that is, 'land of the Bod,' itself probably identical with Bhutan, a Hindu name restricted by Europeans to a single state on the southern slope of the Himalayas. The Chinese call Tibet either Si-Tsang—that is, West Tsang, from its principal province—or Wei-Tsang, a word applied to the two provinces of Wei and Tsang, which jointly constitute Tibet proper. To the inhabitants they give the name of Tu-Fan, or 'Aboriginal Fans,' in opposition to the Si-Fan, or 'Western Fans,' of Sechuen and Kansu. . . . Suspended like a vast terrace some 14,000 or 16,000 feet above the surrounding plains, the Tibetan plateau is more than half filled with closed basins dotted with a few lakes or marshes, the probable remains of inland seas whose overflow discharged through the breaks in the frontier ranges. . . . During the present century the Tibetan Government has succeeded better than any other Asiatic state in preserving the political isolation of the people, thanks chiefly to the relief and physical conditions of the land. Tibet rises like a citadel in the heart of Asia; hence its defenders have guarded its approaches more easily than those of India, China, and Japan. The greater part of Tibet remains still unexplored. . . . The great bulk of the inhabitants, apart from the Mongolo-Tartar Horsoks of Khachi and the various independent tribes of the province of Kham, belong to a distinct branch of the Mongolian family. They are of low size, with broad shoulders and chests, and present a striking contrast to the Hindus in the size of their arms and calves, while resembling them in their small and delicate hands and feet. . . . The Tibetans are one of the most highly endowed people in the world. Nearly all travellers are unanimous in praise of their gentleness, frank and kindly bearing, unaffected dignity. Strong, courageous, naturally cheerful, fond of music, the dance and song, they would be a model race but for their lack of enterprise. They are as easily governed as a flock of sheep, and for them the word of a lama has force of law. Even the mandates of the Chinese authorities are scrupulously obeyed, and thus it happens that against their own friendly feelings they jealously guard the frontiers against all strangers. The more or less mixed races of East Tibet on the Chinese

frontier, on the route of the troops that plunder them and of the mandarins who oppress them, seem to be less favourably constituted, and are described as thievish and treacherous. . . . The Tibetans have long been a civilised people. . . . In some respects they are even more civilised than those of many European countries, for reading and writing are general accomplishments in many places, and books are here so cheap that they are found in the humblest dwellings, though several of these works are kept simply on account of their magical properties. In the free evolution of their speech, which has been studied chiefly by Foucaux, Csoma de Körös, Schiefner, and Jäschke, the Tibetans have outlived the period in which the Chinese are still found. The monosyllabic character of the language, which differs from all other Asiatic tongues, has nearly been effaced. . . . The Tibetan Government is in theory a pure theocracy. The Dalia-lama, called also the Gyalba-remboché, 'Jewel of Majesty,' or 'Sovereign Treasure,' is at once god and king, master of the life and fortunes of his subjects, with no limit to his power except his own pleasure. [On Lamaism in Tibet, see LAMAS.] Nevertheless he consents to be guided in ordinary matters by the old usages, while his very greatness prevents him from directly oppressing his people. His sphere of action being restricted to spiritual matters, he is represented in the administration by a viceroy chosen by the Emperor in a supreme council of three high priests. . . . Everything connected with general politics and war must be referred to Peking, while local matters are left to the Tibetan authorities. . . . Pope, viceroy, ministers, all receive a yearly subvention from Peking and all the Tibetan mandarins wear on their hats the button, or distinctive sign of the dignities conferred by the empire. Every third or fifth year a solemn embassy is sent to Peking with rich presents, receiving others in exchange from the 'Son of Heaven.'. . . The whole land belongs to the Dalai-lama, the people being merely temporary occupants, tolerated by the real owner. The very houses and furniture and all movable property are held in trust for the supreme master, whose subjects must be grateful if he takes a portion only for the requirements of the administration. One of the most ordinary sentences, in fact, is wholesale confiscation, when the condemned must leave house and lands, betaking themselves to a camp life, and living by begging in the districts assigned to them. So numerous are these chong long, or official mendicants, that they form a distinct class in the State. . . . Since the cession of Ladak to Kashmîr, and the annexation of Batang, Litang, Aten-tze, and other districts to Sechuen and Yunnan, Si-tsang, or Tibet proper, comprises only the four provinces of Nari, Tsang, Wei, or U, and Kham. Certain principalities enclosed in these provinces are completely independent of Lassa, and either enjoy self-government or are directly administered from Peking. . . . Even in the four provinces the Chinese authorities interfere in many ways, and their power is especially felt in that of Nari, where, owing to its dangerous proximity to Kashmir and India, the old spirit of independence might be awakened. Nor is any money allowed to be coined in Tibet, which in the eyes of the Imperial Government is merely a dependency of Sechuen, whence all orders are received in Lassa."—É. Reclus, *The Earth and its Inhabitants: Asia, v.* 2, *ch.* 2.

TIBISCUS, The.—The ancient name of the river Theiss.

TIBUR.—An important Latin city, more ancient than Rome, from which it was only 20 miles distant, on the Anio. Tibur, after many wars, was reduced by the Romans to subjection in the 4th century, B. C., and the delightful country in its neighborhood became a favorite place of residence for wealthy Romans in later times. The ruins of the villa of Hadrian have been identified in the vicinity, and many others have been named, but without historical authority. Hadrian's villa is said to have been like a town in its vast extent. The modern town of Tivoli occupies the site of Tibur.—R. Burn, *Rome and the Campagna, ch.* 14.

TIERRA FIRME.—"The world was at a loss at first [after Columbus' discovery] what to call the newly found region to the westward. It was easy enough to name the islands, one after another, as they were discovered, but when the Spaniards reached the continent they were backward about giving it a general name. . . . As the coast line of the continent extended itself and became known as such, it was very naturally called by navigators 'tierra firme,' firm land, in contradistinction to the islands which were supposed to be less firm. . . . The name Tierra Firme, thus general at first, in time became particular. As a designation for an unknown shore it at first implied only the Continent. As discovery unfolded, and the magnitude of this Firm Land became better known, new parts of it were designated by new names, and Tierra Firme became a local appellation in place of a general term. Paria being first discovered, it fastened itself there; also along the shore to Darien, Veragua, and on to Costa Rica, where at no well defined point it stopped, so far as the northern seaboard was concerned, and in due time struck across to the South Sea, where the name marked off an equivalent coast line. . . . As a political division Tierra Firme had existence for a long time. It comprised the provinces of Darien, Veragua, and Panamá, which last bore

also the name of Tierra Firme as a province. The extent of the kingdom was 65 leagues in length by 18 at its greatest breadth, and 9 leagues at its smallest width. It was bounded on the east by Cartagena, and the gulf of Urabá and its river; on the west by Costa Rica, including a portion of what is now Costa Rica; and on the north and south by the two seas. . . . Neither Guatemala, Mexico, nor any of the lands to the north were ever included in Tierra Firme. English authors often apply the Latin form, Terra Firma, to this division, which is misleading."—H. H. Bancroft, *Hist. of the Pacific States, v.* 1, *p.* 290, *foot-note.*—See, also, Spanish Main.

TIGORINI, OR TIGURINI, in Gaul, The.—After the Cimbri had defeated two Roman armies, in 113 and 109 B. C., "the Helvetii, who had suffered much in the constant conflicts with their north-eastern neighbours, felt themselves stimulated by the example of the Cimbri to seek in their turn for more quiet and fertile settlements in western Gaul, and had, perhaps, even when the Cimbrian hosts marched through their land, formed an alliance with them for that purpose. Now, under the leadership of Divico, the forces of the Tougeni (position unknown) and of the Tigorini (on the lake of Murten) crossed the Jura and reached the territory of the Nitiobroges (about Agen on the Garonne). The Roman army under the consul Lucius Cassius Longinus, which they here encountered, allowed itself to be decoyed by the Helvetii into an ambush, in which the general himself and his legate, the consular Gaius Piso, along with the greater portion of the soldiers, met their death."—T. Mommsen, *Hist. of Rome, bk.* 4, *ch.* 5.—Subsequently the Tigorini and the Tougeni joined the Cimbri, but were not present at the decisive battle on the Raudine Plain and escaped the destroying swords of the legions of Marius, by flying back to their native Helvetia.

TIMAR.—TIMARLI.—SAIM.—SPAHI.—"It was Alaeddin who first instituted a division of all conquered lands among the 'Sipahis,' or Spahis (horsemen), on conditions which, like the feudal tenures of Christian Europe, obliged the holders to service in the field. Here, however, ends the likeness between the Turkish 'Timar' and the European fief. The 'Timarli' were not, like the Christian knighthood, a proud and hereditary aristocracy almost independent of the sovereign and having a voice in his councils, but the mere creatures of the Sultan's breath. The Ottoman constitution recognised no order of nobility, and was essentially a democratic despotism. The institution of military tenures was modified by Amurath I., who divided them into the larger and smaller ('Siamet' and 'Timar'), the holders of which were called 'Saim' and 'Timarli.' Every cavalier, or Spahi, who had assisted to conquer by his bravery, was rewarded with a fief, which, whether large or small, was called 'Kilidsch' (the sword). The symbols of his investment were a sword and colours ('Kilidsch' and 'Sandjak')."—T. H. Dyer, *The History of Modern Europe, v.* 1, *introd.*—See, also, Spahis.

TIMOCRACY. See Geomori.

TIMOLEON, and the deliverance of Sicily. See Syracuse: B. C. 344.

TIMOUR, The Conquests of.—"Timour the Tartar, as he is usually termed in history, was called by his countrymen Timourlenk, that is, Timour the Lame, from the effects of an early wound; a name which some European writers have converted into Tamerlane, or Tamberlaine. He was of Mongol origin [see below], and a direct descendant, by the mother's side, of Zenghis Khan. He was born at Sebzar, a town near Samarcand, in Transoxiana, in 1336. . . . Timour's early youth was passed in struggles for ascendency with the petty chiefs of rival tribes, but at the age of thirty-five he had fought his way to undisputed pre-eminence, and was proclaimed Khan of Zagatai by the 'couroultai,' or general assembly of the warriors of his race. He chose Samarcand as the capital of his dominion, and openly announced that he would make that dominion comprise the whole habitable earth. . . . In the thirty-six years of his reign he raged over the world from the great wall of China to the centre of Russia on the north; and the Mediterranean and the Nile were the western limits of his career, which was pressed eastward as far as the sources of the Ganges. He united in his own person the sovereignties of twenty-seven countries, and he stood in the place of nine several dynasties of kings. . . . The career of Timour as a conqueror is unparalleled in history; for neither Cyrus, nor Alexander, nor Cæsar, nor Attila, nor Zenghis Khan, nor Charlemagne, nor Napoleon, ever won by the sword so large a portion of the globe, or ruled over so many myriads of subjugated fellow-creatures."—E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 3.—"Born of the same family as Jenghiz, though not one of his direct descendants, he bore throughout life the humble title of Emir, and led about with him a nominal Grand Khan [a descendant of Chagatai, one of the sons of Jenghiz Khan], of whom he professed himself a dutiful subject. His pedigree may in strictness entitle him to be called a Mogul; but, for all practical purposes, himself and his hordes must be regarded as Turks. Like all the eastern Turks, such civilization as they had was of Persian origin; and it was of the Persian form of Islam that Timour was so zealous an assertor."—E. A. Freeman, *Hist. and Conquests of the Saracens, lect.* 6.—In 1378 Timour overran Khuarezm. Between 1380 and 1386 he subjugated Khorassan, Afghanistan, Baluchistan and Sistan. He then passed into southern Persia and forced the submission of the Mozafferides who reigned over Fars, punishing the city of Isfahan for a rebellious rising by the massacre of 70,000 of its inhabitants. This done, he returned to Samarkand for a period of rest and prolonged carousal. Taking the field again in

1389, he turned his arms northward and shattered the famous "Golden Horde," of the Khanate of Kiptchak, which dominated a large part of Russia. In 1392–93 the Tartar conqueror completed the subjugation of Persia and Mesopotamia, extinguishing the decayed Mongol Empire of the Ilkhans, and piling up a pyramid of 90,000 human heads on the ruins of Bagdad, the old capital of Islam. Thence he pursued his career of slaughter through Armenia and Georgia, and finished his campaign of five years by a last destroying blow struck at the Kiptchak Khan whom he is said to have pursued as far as Moscow. Once more, at Samarkand, the red-handed, invincible savage then gave himself up to orgies of pleasure-making; but it was not for many months. His eyes were now on India, and the years 1398–1399 were spent by him in carrying death and desolation through the Punjab, and to the city of Delhi, which was made a scene of awful massacre and pillage. No permanent conquest was achieved; the plunder and the pleasure of slaughter were the ends of the expedition. A more serious purpose directed the next movement of Timour's arms, which were turned against the rival Turk of Asia Minor, or Roum — the Ottoman, Bajazet, or Bayezid, who boasted of the conquest of the Roman Empire of the East. In 1402, Bajazet was summoned from the siege of Constantinople to defend his realm. On the 20th of July in that year, on the plain of Angora, he met the enormous hosts of Timourlenk and was overwhelmed by them — his kingdom lost, himself a captive. The merciless Tartar hordes swept hapless Anatolia with a besom of destruction and death. Nicæa, Prusa and other cities were sacked. Smyrna provoked the Tartar savage by an obstinate defense and was doomed to the sword, without mercy for age or sex. Even then, the customary pyramid of heads which he built on the site was not large enough to satisfy his eye and he increased its height by alternate layers of mud. Aleppo, Damascus, and other cities of Syria had been dealt with in like manner the year before. When satiated with blood, he returned to Samarkand in 1404, rested there until January 1405, and then set out upon an expedition to China; but he died on the way. His empire was soon broken in pieces.—A. Vambery, *Hist. of Bokhara, ch.* 10, 11, 12.

TOGA, The Roman.—"The toga, the specifically national dress of the Romans, was originally put on the naked body, fitting much more tightly than the rich folds of the togas of later times. About the shape of this toga, which is described as a semicircular cloak . . . , many different opinions prevail. Some scholars consider it to have been an oblong piece of woven cloth . . . ; others construct it of one or even two pieces cut into segments of a circle. Here again we shall adopt in the main the results arrived at through practical trials by Weiss ('Costümkunde,' p. 956 et seq.). The Roman toga therefore was not . . . a quadrangular oblong, but 'had the shape of an oblong edged off into the form of an oval, the middle length being equal to about three times the height of a grown-up man (exclusive of the head), and its middle breadth equal to twice the same length. In putting it on, the toga was at first folded lengthwise, and the double dress thus originated was laid in folds on the straight edge and thrown over the left shoulder in the simple manner of the Greek or Tuscan cloak; the toga, however, covered the whole left side and even dragged on the ground to a considerable extent. The cloak was then pulled across the back and through the

right arm, the ends being again thrown over the left shoulder backwards. The part of the drapery covering the back was once more pulled towards the right shoulder, so as to add to the richness of the folds.'. . . The simpler, that is narrower, toga of earlier times naturally clung more tightly to the body."—E. Guhl and W. Koner, *Life of the Greeks and Romans, sect.* 95.—"No tacks or fastenings of any sort indeed are visible in the toga, but their existence may be inferred from the great formality and little variation displayed in its divisions and folds. In general, the toga seems not only to have formed, as it were, a short sleeve to the right arm, which was left unconfined, but to have covered the left arm down to the wrist. . . . The material of the toga was wool; the colour, in early ages, its own natural yellowish hue. In later periods this seems, however, only to have been retained in the togas of the higher orders; inferior persons wearing theirs dyed, and candidates for public offices bleached by an artificial process. In times of mourning the toga was worn black, or was left off altogether. Priests and magistrates wore the 'toga pretexta,' or toga edged with a purple border, called pretexta. This . . . was, as well as the bulla, or small round gold box suspended on the breast by way of an amulet, worn by all youths of noble birth to the age of fifteen. . . . The knights wore the 'trabea,' or toga striped with purple throughout."—T. Hope, *Costume of the Ancients, v.* 1.

TONKIN.—COCHIN-CHINA.—ANNAM.—CAMBOJA.—"The whole region which recent events have practically converted into French territory comprises four distinct political divisions: Tonkin in the north; Cochin-China in the centre; Lower Cochin-China and Camboja in the south. The first two, formerly separate States, have since 1802 constituted a single kingdom, commonly spoken of as the empire of Annam. This term Annam (properly An-nan) appears to be a modified form of Ngan-nan, that is, 'Southern Peace,' first applied to the frontier river between China and Tonkin, and afterwards extended not only to Tonkin, but to the whole region south of that river after its conquest and pacification by China in the third century of the new era. Hence its convenient application to the same region since the union of Tonkin and Cochin-China under one dynasty and since the transfer of the administration to France in 1883, is but a survival of the Chinese usage, and fully justified on historic grounds. Tonkin (Tongking, Tungking), that is, 'Eastern Capital,' a term originally applied to Ha-noi when that city was the royal residence, has in quite recent times been extended to the whole of the northern kingdom, whose true historic name is Yüeh-nan. Under the native rulers Tonkin was divided into provinces and sub-divisions bearing Chinese names, and corresponding to the administrative divisions of the Chinese empire. . . . Since its conquest by Cochin-China the country has been administered in much the same way as the southern kingdom. From this State Tonkin is separated partly by a spur of the coast range projecting seawards, partly by a wall built in the sixteenth century and running in the same direction. After the erection of this artificial barrier, which lies about 18° N. lat., between Hatinh and Dong-koi, the northern and southern kingdoms came to be respectively distinguished by the titles of Dang-ngoai and Dang-trong, that is, 'Outer' and 'Inner Route.' The term Cochin-

China, by which the Inner Route is best known, has no more to do with China than it has with the Indian city of Cochin. It appears to be a modified form of Kwe-Chen-Ching, that is, the 'Kingdom of Chen-Ching,' the name by which this region was first known in the 9th century of the new era, from its capital Chen-Ching. Another although less probable derivation is from the Chinese Co-Chen-Ching, meaning 'Old Champa,' a reminiscence of the time when the Cham (Tsiam) nation was the most powerful in the peninsula. . . . Before the arrival of the French, Cochin-China comprised the whole of the coast lands from Tonkin nearly to the foot of the Pursat hills in South Camboja. . . . From the remotest times China claimed, and intermittently exercised, suzerain authority over Annam, whose energies have for ages been wasted partly in vain efforts to resist this claim, partly in still more disastrous warfare between the two rival States. Almost the first distinctly historic event was the reduction of Lu-liang, as Tonkin was then called, by the Chinese in 218 B. C., when the country was divided into prefectures, and a civil and military organisation established on the Chinese model. . . . Early in the ninth century of the new era the term Kwe-Chen-Ching (Cochin-China) began to be applied to the southern, which had already asserted its independence of the northern, kingdom. In 1428 the two States freed themselves temporarily from the Chinese protectorate, and 200 years later the Annamese reduced all that remained of the Champa territory, driving the natives to the uplands, and settling in the plains. This conquest was followed about 1750 by that of the southern or maritime provinces of Camboja since known as Lower (now French) Cochin-China. In 1775 the King of Cochin-China, who had usurped the throne in 1774, reduced Tonkin, and was acknowledged sovereign of Annam by the Chinese emperor. But in 1798 Gia-long, son of the deposed monarch, recovers the throne with the aid of some French auxiliaries, and in 1802 reconstitutes the Annamese empire under the Cochin-Chinese sceptre. From this time the relations with France become more frequent. . . . After his death in 1820 the anti-European national party acquires the ascendant, the French officers are dismissed, and the Roman Catholic religion, which had made rapid progress during the reign of Gia-long, is subjected to cruel and systematic persecution. Notwithstanding the protests and occasional intervention of France, this policy is persevered in, until the execution of Bishop Diaz in 1857 by order of Tu-Duc, third in succession from Gia-long, calls for more active interference. Admiral Rigault de Genouilly captures Tourane in 1858, followed next year by the rout of the Annamese army at the same place, and the occupation of the forts at the entrance of the Donnai and of Gia-dińh (Saigon), capital of Lower Cochin-China. This virtually established French supremacy, which was sealed by the treaty of 1862, ceding the three best, and that of 1867 the three remaining, provinces of Lower Cochin-China. It was further strengthened and extended by the treaty of 1863, securing the protectorate of Camboja and the important strategical position of 'Quatre-Bras' on the Mekhong. Then came the scientific expedition of Mekhong (1866–68), which dissipated the hopes entertained of that river giving access to the trade of Southern China. Attention was accordingly now attracted to the Song-koi basin, and the establishment of French interests in Tonkin secured by the treaties of peace and commerce concluded with the Annamese Government in 1874. This prepared the way for the recent diplomatic complications with Annam and China, followed by the military operations in Cochin-China and Tonkin [see FRANCE: A. D. 1875–1889], which led up to the treaties of 1883 and 1884, extending the French protectorate to the whole of Annam, and forbidding the Annamese Government all diplomatic relations with foreign powers, China included, except through the intermediary of France. Lastly, the appointment in 1886 of a French Resident General, with full administrative powers, effaced the last vestige of national autonomy, and virtually reduced the ancient kingdoms of Tonkin and Cochin-China to the position of an outlying French possession."—A. H. Keane, *Eastern Geography, pp.* 98–104.—"In the south-eastern extremity of Cochin-China, and in Camboja, still survive the scattered fragments of the historical Tsiam (Cham, Khiam) race, who appear to have been at one time the most powerful nation in Farther India. According to Gagelin, they ruled over the whole region between the Menam and the Gulf of Tongking. . . . Like the Tsiams, the Cambojans, or Khmers, are a race sprung from illustrious ancestry, but at present reduced to about 1,500,000, partly in the south-eastern provinces of Siam, partly forming a petty state under French protection, which is limited east and west by the Mekong and Gulf of Siam, north and south by the Great Lake and French Cochin-China. During the period of its prosperity the Cambojan empire overshadowed a great part of Indo-China, and maintained regular intercourse with Cis-gangetic India on the one hand, and on the other with the Island of Java. The centre of its power lay on the northern shores of the Great Lake, where the names of its great cities, the architecture and sculptures of its ruined temples, attest the successive influences of Brahmanism and Buddhism on the local culture. A native legend, based possibly on historic data, relates how a Hindu prince migrated with ten millions of his subjects, some twenty-three centuries ago, from Indraspathi (Delhi) to Camboja, while the present dynasty claims descent from a Benares family. But still more active relations seem to have been maintained with Lanka (Ceylon), which island has acquired almost a sacred character in the eyes of the Cambojans. The term Camboja itself (Kampushea, Kamp'osha) has by some writers been wrongly identified with the Camboja of Sanskrit geography. It simply means the 'land of the Kammen,' or 'Khmer.' Although some years under the French protectorate, the political institutions of the Cambojan state have undergone little change. The king, who still enjoys absolute power over the life and property of his subjects, chooses his own mandarins, and these magistrates dispense justice in favour of the highest bidders. Trade is a royal monopoly, sold mostly to energetic Chinese contractors; and slavery has not yet been abolished, although the severity of the system has been somewhat mitigated since 1877. Ordinary slaves now receive a daily pittance, which may help to purchase their freedom. . . . On the eastern slopes, and in the lower Mekong basin,

the dominant race are the Giao-shi (Giao-kii) or Annamese, who are of doubtful origin, but resemble the Chinese more than any other people of Farther India. Affiliated by some to the Malays, by others to the Chinese, Otto Kunze regards them as akin to the Japanese. According to the local traditions and records they have gradually spread along the coast from Tongking southwards to the extremity of the Peninsula. After driving the Tsiams into the interior, they penetrated about 1650 to the Lower Mekong, which region formerly belonged to Camboja, but is now properly called French Cochin-China. Here the Annamese, having driven out or exterminated most of the Cambojans, have long formed the great majority of the population."—É. Reclus, *The Earth and its Inhabitants: Asia, v.* 3, *ch.* 22.

TORIES, English: Origin of the Party and the Name. See RAPPAREES; ENGLAND: A. D. 1680; and CONSERVATIVE PARTY.

Of the American Revolution, and their exile.—"Before the Revolution the parties in the colonies were practically identical with the Whigs and Tories of the mother country, the Whigs or anti-prerogative men supporting ever the cause of the people against arbitrary or illegal acts of the governor or the council. In the early days of the Revolution the ultra Tories were gradually driven into the ranks of the enemy, until for a time it might be said that all revolutionary America had become Whig; the name Tory, however, was still applied to those who, though opposed to the usurpations of George III., were averse to a final separation from England."—G. Pellew, *John Jay, p.* 269.—"The terms Tories, Loyalists, Refugees, are burdened with a piteous record of wrongs and sufferings. It has not been found easy or satisfactory for even the most candid historian to leave the facts and arguments of the conflict impartially adjusted. Insult, confiscation of property, and exile were the penalties of those who bore these titles. . . . Remembering that the most bitter words of Washington that have come to us are those which express his scorn of Tories, we must at least look to find some plausible, if not justifying, ground for the patriot party. Among those most frank and fearless in the avowal of loyalty, and who suffered the severest penalties, were men of the noblest character and of the highest position. So, also, bearing the same odious title, were men of the most despicable nature, self-seeking and unprincipled, ready for any act of evil. And between these were men of every grade of respectability and of every shade of moral meanness. . . . As a general rule, the Tories were content with an unarmed resistance, where they were not reinforced by the resources or forces of the enemy. But in successive places in possession of the British armies, in Boston, Long Island, New York, the Jerseys, Philadelphia, and in the Southern provinces, there rallied around them Tories both seeking protection, and ready to perform all kinds of military duty as allies. By all the estimates, probably below the mark, there were during the war at least 25,000 organized loyalist forces. . . . When the day of reckoning came at the close of the war, it needed no spirit of prophecy to tell how these Tories, armed or unarmed, would fare, and we have not to go outside the familiar field of human nature for an explanation. That it was not till six months after the ratification of the treaty by Congress that Sir Guy Carleton removed the British army from New York — the delay being caused by his embarrassment from the crowds of loyalists seeking his protection — is a reminder to us of their forlorn condition. . . . From all over the seaboard of the continent refugees made their way to New York in crowds. . . . They threw themselves in despair upon the protection of the British commander. . . . He pleaded his encumbrances of this character in answer to the censures upon him for delaying his departure, and he vainly hoped that Congress would devise some measures of leniency to relieve him. It is difficult to estimate with any approach to exactness the number of these hounded victims. Many hundreds of them had been seeking refuge in Nova Scotia and New Brunswick since the autumn of 1782, and additional parties, in increasing number, followed to the same provinces. An historian [Murdoch, "Hist. of Nova Scotia"] sets the whole number at the close of 1783 at 25,000. Large numbers of the loyalists of the Southern provinces were shipped to the Bahamas and to the West India Islands. At one time Carleton had upon his hands over 12,000 Tories clamorous for transportation. . . . A celebration of the centennial of the settlement of Upper Canada by these exiles took place in 1884. At a meeting of the royal governor, Lord Dorchester, and the council, in Quebec, in November, 1789, in connection with the disposal of still unappropriated crown lands in the province, order was taken for the making and preserving of a registry of the names of all persons, with those of their sons and daughters, 'who had adhered to the unity of the empire, and joined the royal standard in America before the treaty of separation in the year 1783.' The official list contains the names of several thousands. It was by their descendants and representatives that the centennial occasion referred to was observed. . . . Some bands passed to Canada by Whitehall, Lake Champlain, Ticonderoga, and Plattsburg, then south-

ward to Cornwall, ascending the St. Lawrence, and settling on the north bank. Others went from New Brunswick and Nova Scotia up the St. Lawrence to Sorel, where they wintered, going afterwards to Kingston. Most of the exiles ascended the Hudson to Albany, then by the Mohawk and Wood Creek to Oneida and Ontario lakes. . . . As these exiles had stood for the unity of the empire, they took the name of the 'United Empire Loyalists'" (a name which is often abbreviated in common use to U. E. Loyalists).— G. E. Ellis, *The Loyalists and their Fortunes (Narrative and Critical Hist. of Am., v. 7, pp. 185–214).*— "Some 10,000 refugees had, in 1784, and the few years following, found homes in Western Canada, just as it is estimated . . . that 20,000 had settled in the provinces by the sea. Assuming full responsibility for the care and present support of her devoted adherents, Great Britain opened her hand cheerfully to assist them. . . . The sum paid by the British Government to the suffering refugees was about $15,000,000."— G. Bryce, *Short Hist. of the Canadian People, ch. 7, sect. 2.*

TOTEMS.—"A peculiar social institution exists among the [North American] Indians, very curious in its character; and though I am not prepared to say that it may be traced through all the tribes east of the Mississippi, yet its prevalence is so general, and its influence on political relations so important, as to claim especial attention. Indian communities, independent of their local distribution into tribes, bands, and villages, are composed of several distinct clans. Each clan has its emblem, consisting of the figure of some bird, beast, or reptile; and each is distinguished by the name of the animal which it thus bears as its device; as, for example, the clan of the Wolf, the Deer, the Otter, or the Hawk. In the language of the Algonquins, these emblems are known by the name of 'Totems.' The members of the same clan, being connected, or supposed to be so, by ties of kindred more or less remote, are prohibited from intermarriage. Thus Wolf cannot marry Wolf; but he may, if he chooses, take a wife from the clan of Hawks, or any other clan but his own. It follows that when this prohibition is rigidly observed, no single clan can live apart from the rest; but the whole must be mingled together, and in every family the husband and wife must be of different clans. To different totems attach different degrees of rank and dignity; and those of the Bear, the Tortoise, and the Wolf are among the first in honor. Each man is proud of his badge, jealously asserting its claims to respect; and the members of the same clan, though they may, perhaps, speak different dialects, and dwell far asunder, are yet bound together by the closest ties of fraternity. If a man is killed, every member of the clan feels called upon to avenge him; and the wayfarer, the hunter, or the warrior is sure of a cordial welcome in the distant lodge of the clansman whose face perhaps he has never seen. It may be added that certain privileges, highly prized as hereditary rights, sometimes reside in particular clans; such as that of furnishing a sachem to the tribe, or of performing certain religious ceremonies or magic rites."— F. Parkman, *Conspiracy of Pontiac, ch. 1.*—"A totem is a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation. The name is derived from an Ojibway (Chippeway) word 'totem,' the correct spelling of which is somewhat uncertain. It was first introduced into literature, so far as appears, by J. Long, an Indian interpreter of last century, who spelt it 'totam.'. . . The connexion between a man and his totem is mutually beneficent; the totem protects the man, and the man shows his respect for the totem in various ways, by not killing it if it be an animal, and not cutting or gathering it if it be a plant. As distinguished from a fetich, a totem is never an isolated individual, but always a class of objects, generally a species of animals or of plants, more rarely a class of inanimate natural objects, very rarely a class of artificial objects. Considered in relation to men, totems are of at least three kinds:— (1) the clan totem, common to a whole clan, and passing by inheritance from generation to generation; (2) the sex totem, common either to all the males or to all

the females of a tribe, to the exclusion in either case of the other sex; (3) the individual totem, belonging to a single individual and not passing to his descendants."—J. G. Frazer, *Totemism, pp.* 1–2.

TOULOUSE: B. C. 106.—Acquisition by the Romans.— Tolosa, modern Toulouse, was the chief town of the Volcæ Tectosages (see Volcæ, The), a Gallic tribe which occupied the upper basin of the Garonne, between the western prolongation of the Cévennes and the eastern Pyrenees. Some time before 106 B. C. the Romans had formed an alliance with the Tectosages which enabled them to place a garrison in Tolosa; but the people had tired of the arrangement, had risen against the garrison and had put the soldiers in chains. On that provocation, Q. Servilius Cæpio, one of the consuls of the year 106, advanced upon the town, found traitors to admit him within its gates, and sacked it as a Roman general knew how to do. He found a great treasure of gold in Tolosa, the origin of which has been the subject of much dispute. The treasure was sent off under escort to Massilia, but disappeared on the way, its escort being attacked and slain. Consul Cæpio was accused of the robbery; there was a great scandal and prosecution at Rome, and "Aurum Tolosanum"—"the gold of Toulouse"—became a proverbial expression, applied to ill-gotten wealth.—G. Long, *Decline of the Roman Republic, v.* 2, *ch.* 1.

10-11th Centuries.—The rise of the Counts. — The counts of Toulouse "represented an earlier line of dukes of Aquitaine, successors of the dukes of Gothia or Septimania, under whom the capital of southern Gaul had been not Poitiers but Toulouse, Poitou itself counting as a mere underfief. In the latter half of the tenth century these dukes of Gothia or Aquitania Prima, as the Latin chroniclers sometimes called them from the Old Roman name of their country, had seen their ducal title transferred to the Poitevin lords of Aquitania Secunda — the dukes of Aquitaine with whom we have had to deal. But the Poitevin overlordship was never fully acknowledged by the house of Toulouse; and this latter in the course of the following century again rose to great importance and distinction, which reached its height in the person of Count Raymond IV., better known as Raymond of St. Gilles, from the name of the little county which had been his earliest possession. From that small centre his rule gradually spread over the whole territory of the ancient dukes of Septimania. In the year of the Norman conquest of England [1066] Rouergue, which was held by a younger branch of the house of Toulouse, lapsed to the elder line; in [1088] the year after the Conqueror's death Raymond came into possession of Toulouse itself; in 1094 he became, in right of his wife, owner of half the Burgundian county of Provence. His territorial influence was doubled by that of his personal fame; he was one of the chief heroes of the first Crusade; and when he died in 1105 he left to his son Bertrand, over and above his Aquitanian heritage, the Syrian county of Tripoli. On Bertrand's death in 1112 these possessions were divided, his son Pontius succeeding him as count of Tripoli, and surrendering his claims upon Toulouse to his uncle Alfonso Jordan, a younger son of Raymond of St. Gilles. Those claims, however, were disputed. Raymond's elder brother, Count William IV., had left an only daughter who, after a childless marriage with King Sancho Ramirez of Aragon, became the wife of Count William VIII. of Poitou. From that time forth it became a moot point whether the lord of St. Gilles or the lord of Poitiers was the rightful count of Toulouse. . . . With all these shiftings and changes of ownership the kings of France had never tried to interfere. Southern Gaul — 'Aquitaine' in the wider sense — was a land whose internal concerns they found it wise to leave as far as possible untouched."—K. TOURNEY.—TOURNAMENT.—JOUST. —"The word tourney, sometimes tournament, and in Latin 'torneamentum,' clearly indicates both the French origin of these games and the principal end of that exercise, the art of manœuvring, of turning ('tournoyer') his horse skilfully, to strike his adversary and shield himself at the same time from his blows. The combats, especially those of the nobility, were always fought on horseback, with the lance and sharp sword; the knight presented himself, clothed in armour which covered his whole body, and which, while it preserved him from wounds, bent to every movement and retarded those of his war horse. It was important, therefore, that constant exercise should accustom the knight's limbs to the enormous weight which he must carry, and the horse to the agility which was expected of him. In a 'passage' or 'pass of arms' ('passage' or 'pas d'armes') the generic name of all those games, this exercise was composed of two parts: the joust, which was a single combat of knight against knight, both clothed in all their arms, and the tourney, which was the image of a general battle, or the encounter and evolutions of two troops of cavalry equal in number."—J. TOWER AND SWORD, The Order of the. — This was an order of knighthood founded in Portugal by Alfonso V., who reigned from 1438 to 1481. "The institution of the order related to a sword reputed to be carefully guarded in a tower of the city of Fez: respecting it there was a prophecy that it must one day come into the possession of a Christian king; in other words, that the Mohammedan empire of northwestern Africa would be subverted by the Christians. Alfonso seemed to believe that he was the destined conqueror."—S. A. Dunham, *Hist. of Spain and Portugal, v.* 3, *p.* 225 (*Am. ed.*).

TOWER OF LONDON, The. — "Built originally by the Conqueror to curb London, afterwards the fortress-palace of his descendants, and in the end the State prison, from which a long procession of the ill-starred great went forth to lay their heads on the block on Tower Hill; while State murders, like those of Henry VI. and the two young sons of Edward IV., were done in the dark chambers of the Tower itself."—Goldwin Smith, *A Trip to England, p.* 56.—"Even as to length of days, the Tower has no rival among palaces and prisons. . . . Old writers date it from the days of Caesar; a legend taken up by Shakspeare and the poets in favour of which the name of Caesar's Tower remains in popular use to this very day. A Roman wall can even yet be traced near some parts of the ditch. The Tower is mentioned in the Saxon Chronicle, in a way not incompatible with the fact of a Saxon stronghold having stood upon the spot. The buildings as we have them now in block and plan were commenced by William the Conqueror; and the series of apartments in Caesar's Tower [the great Norman keep now called the White Tower] — hall, gallery, council chamber, chapel — were built in the early Norman reigns and used as a royal residence by all our Norman kings."—W. H. Dixon, *Her Majesty's Tower, ch.* 1.—"We are informed by the 'Textus Roffensis' that the present Great or White Tower was constructed by Gundulph, Bishop of Rochester, under the direction of King William I., who was suspicious of the fidelity of the citizens. The date assigned by Stow is 1078."—J. Britton and E. W. Brayley, *Memoirs of the Tower of London, ch.* 1.

TOWN.—"Burh, burgh, borough, in its various spellings and various shades of meaning, is our native word for urbes of every kind from Rome downward. It is curious that this word should in ordinary speech have been so largely displaced by the vaguer word tun, town, which means an enclosure of any kind, and in some English dialects is still applied to a single house and its surroundings."—E. A. Freeman, *City and Borough* (*Macmillan's Mag., May,* 1889).— See, also, TOWNSHIP; BOROUGH; GUILDS; and COMMUNE.

TOWNSHEND MEASURES, The. See UNITED STATES OF AMERICA: A. D. 1766–1767.

TOWNSHIP.—"In recent historical writing dealing with Anglo-Saxon conditions, a great place has been occupied by the 'township.' The example was set sixty years ago by Palgrave; but it does not seem to have been generally followed until in 1874 Dr. Stubbs gave the word a prominent place in his 'Constitutional History.' With Dr. Stubbs the 'township' was 'the unit of the constitutional machinery or local administration'; and since then most writers on constitutional and legal history have followed in the same direction. . . . The language commonly used in this connection need not, perhaps, necessarily be understood as meaning that the phenomenon which the writers have in mind was actually known to the Saxons themselves as a 'township' ('tunscipe'). It may be said that 'township' is merely a modern name which it is convenient to apply to it. Yet, certainly, that language usually suggests that it was under that name that the Saxons knew it. . . . It is therefore of some interest, at least for historical terminology,—and possibly for other and more important reasons,—to point out that there is no good foundation in Anglo-Saxon sources for such a use of the term; that 'tunscipe' in the few places where it does appear does not mean an area of land, an extent of territory, or even the material houses and crofts of a village; that it is probably nothing more than a loose general term

for 'the villagers.' . . . Only three passages in Anglo-Saxon literature have as yet been found in which the word 'tunscipe' appears,—the Saxon translation of Bede's 'Ecclesiastical History,' v. 10, the laws of Edgar, iv. 8, and the 'Saxon Chronicle,' s. a 1137. . . . The later history of the word 'township' would probably repay investigation. It is certainly not a common word in literature until comparatively recent times; and, where it does appear, its old meaning seems often to cling to it. . . . There is a good deal to make one believe that 'town' [see, above, TOWN] continued to be the common popular term for what we may describe in general language as a rural centre of population even into the 18th century. . . . The far more general use of the word 'town' than of 'township' in early New England is most naturally explained by supposing that it was the word ordinarily employed in England at the time of the migration,—at any rate, in East Anglia. . . . It might very naturally be said that the effect of the foregoing argument is no more than to replace 'township' by town, and that such a change is immaterial,—that it is a difference between tweedle-dum and tweedle-dee. I cannot help thinking, however, that the adoption of a more correct terminology will be of scientific advantage; and for this reason. So long as we speak of the Anglo-Saxon 'township' we can hardly help attaching to the word somewhat of the meaning which it has borne since the sixteenth century. We think of it as an area inhabited by freemen with an administrative machinery in the hands of an assembly of those inhabitants and of officers chosen by them. We start, therefore, with a sort of unconscious presumption that the 'township' was what we call 'free.' . . . Now, it is this question as to the position of the body of the population in the earliest Anglo-Saxon times that is just now at issue; and no student would say that at present the question is settled."—W. J. Ashley, *The Anglo-Saxon "Township"* (*Quarterly Journal of Economics, April*, 1894).

TOWNSHIP AND TOWN-MEETING, The New England.—"When people from England first came to dwell in the wilderness of Massachusetts Bay, they settled in groups upon small irregular-shaped patches of land, which soon came to be known as townships. . . . This migration . . . was a movement, not of individuals or of separate families, but of church-congregations, and it continued to be so as the settlers made their way inland and westward. . . . A township would consist of about as many farms as could be disposed within convenient distance from the meeting-house, where all the inhabitants, young and old, gathered every Sunday, coming on horseback or afoot. The meeting-house was thus centrally situated, and near it was the town pasture or 'common,' with the school-house and the block-house, or rude fortress for defence against the Indians. . . . Around the meeting-house and common the dwellings gradually clustered into a village, and after a while the tavern, store, and town-house made their appearance. . . . Under these circumstances they developed a kind of government which we may describe in the present tense, for its methods are pretty much the same to-day that they were two centuries ago. In a New England township the people directly govern themselves; the government is the people. or, to speak with entire precision, it is all the male inhabitants of one-and-twenty years of age and upwards. The people tax themselves. Once each year, usually in March but sometimes as early as February or as late as April, a 'town-meeting' is held, at which all the grown men of the township are expected to be present and to vote, while any one may introduce motions or take part in the discussion. . . . The town-meeting is held in the town-house, but at first it used to be held in the church, which was thus a 'meeting-house' for civil as well as ecclesiastical purposes. At the town-meeting measures relating to the administration of town affairs are discussed and adopted or rejected; appropriations are made for the public expenses of the town, or in other words the amount of the town taxes for the year is determined; and town officers are elected for the year. . . . The principal executive magistrates of the town are the selectmen. They are three, five, seven, or nine in number. . . . It [the town] was simply the English parish government brought into a new country and adapted to the new situation. Part of this new situation consisted in the fact that the lords of the manor were left behind. There was no longer any occasion to distinguish between the township as a manor and the township as a parish; and so, as the three names had all lived on together, side by side, in England, it was now the oldest and most generally descriptive name, 'township,' that survived, and has come into use throughout a great part of the United States. . . . New York had from the very beginning the rudiments of an excellent system of local self-government. The Dutch villages had their assemblies, which under the English rule were developed into town-meetings, though with less ample powers than those of New England. . . . The New York system is of especial interest, because it has powerfully influenced the development of local institutions throughout the Northwest."—J. Fiske, *Civil Government in the U. S., ch.* 2 *and* 4.—"The name town first occurs in the record of the second colonial meeting of the Court of Assistants [Massachusetts Bay, Sept. 7, 1630], in connection with the naming of Boston, Charlestown and Watertown. . . . A rude pattern of a frame of town government was shaped by Dorchester, when, in place of the earlier practice of transacting business at meetings of the whole body of its freemen (the grants of land being certified by a committee consisting of the clergymen and deacons), it designated certain inhabitants, twelve in number, to meet weekly, and consult and determine upon public affairs,—without any authority, however, beyond other inhabitants who should choose to come and take part in their consultations and votes. About the same time, at Watertown, it was 'agreed by the consent of the freemen, that there should be three persons chosen for the ordering of the civil affairs.' In the fourth year from the settlement of Boston, at which time the earliest extant records were made, three persons were chosen 'to make up the ten to manage the affairs of the town.' The system of delegated town action was there perhaps the same which was defined in an 'Order made by the inhabitants of Charlestown, at a full meeting [Feb. 10, 1635], for the government of the town by Selectmen,'—the name presently extended throughout New England to the municipal governors. . . . The towns have

been, on the one hand, separate governments, and, on the other, the separate constituents of a common government. In Massachusetts, for two centuries and a quarter, the Deputies in the General Court — or Representatives, as they have been named under the State Constitution — continued to represent the municipal corporations. In New Hampshire, Vermont, Connecticut and Rhode Island, that basis of representation still subsists."—J. G. Palfrey, *Hist. of New Eng., v. 1, ch. 9.*—"Boston . . . is the largest community that ever maintained the town organization, probably the most generally able and intelligent. No other town ever played so conspicuous a part in connection with important events. It led Massachusetts, New England, the thirteen colonies, in the struggle for independence. Probably in the whole history of the Anglo-Saxon race, there has been no other so interesting manifestation of the activity of the Folk-mote. Of this town of towns, Samuel Adams was the son of sons. . . . One may almost call him the creature of the town-meeting."—J. K. Hosmer, *Samuel Adams, the Man of the Town-Meeting (Johns Hopkins Univ. Studies, series 2, no. 4).*

TOWTON, Battle of (A. D. 1461).— On Palm Sunday, March 29, 1461, two armies of Englishmen met on a "goodly plain," ten miles from the city of York, between the villages of Towton and Saxton, to fight out the contention of the parties of the "two roses,"— of Lancaster and York. The battle they fought is called the bloodiest that ever dyed English soil. It raged through an afternoon and a night until the following day, and the slain of the two sides has been variously reckoned by different historians at 20,000 to 38,000. No quarter was given by the victorious partisans of Edward IV. and the Lancastrians were utterly crushed. Henry VI. fled to Scotland and Queen Margaret repaired to France.— See ENGLAND: A. D. 1455–1471.— C. Ransome, *Battle of Towton (English Historical Rev., July*, 1889).

TOXANDRIA. — After Julian's successful campaigns against the Franks, A. D. 358, the latter were permitted to remain, as subjects of the Roman Empire, in "an extensive district of Brabant, which was then known by the appellation of Toxandria, and may deserve to be considered as the original seat of their Gallic monarchy. . . . This name seems to be derived from the 'Toxandri' of Pliny, and very frequently occurs in the histories of the middle age. Toxandria was a country of woods and morasses, which extended from the neighbourhood of Tongres to the conflux of the Vahal and the Rhine."—E. Gibbon, *Decline and Fall of the Roman Empire, ch. 19, with foot-note.*—See, also, GAUL: A. D. 355–361.

TRAPPISTS.—The monks of La Trappe are often referred to as Trappists. "This celebrated abbey was one of the most ancient belonging to the Order of Cisteaux [the Cistercians]. It was established [A. D. 1140] by Rotrou, the second count of Perche, and undertaken to accomplish a vow made whilst in peril of shipwreck." In the 17th century the monks had become scandalously degenerate and dissolute. Their institution was reformed by M. de Rancé, who assumed the direction as abbot in 1662, and who introduced the severe discipline for which the monastery was afterwards famous.

Among its rules was one of absolute silence.—C. Lancelot, *A Tour to Alet and La Grande Chartreuse, v.* 1, *pp.* 113–186.

TREBIZOND: Origin of the city.—"Trebizond, celebrated in the retreat of the Ten Thousand as an ancient colony of Greeks, derived its wealth and splendour from the munificence of the Emperor Hadrian, who had constructed an artificial port on a coast left destitute by nature of secure harbours. The city was large and populous."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 10.

A. D. 258.—Capture by the Goths. See Goths: A. D. 258–267.

A. D. 1204-1461.—The Greek empire.—"The empire of Trebizond was the creation of accident. . . . The destruction of a distant central government, when Constantinople was conquered by the Frank Crusaders, left [the] provincial administration without the pivot on which it had revolved. The conjuncture was seized by a young man, of whom nothing was known but that he bore a great name, and was descended from the worst tyrant in the Byzantine annals. This youth grasped the vacant sovereignty, and, merely by assuming the imperial title, and placing himself at the head of the local administration, founded a new empire. Power changed its name and its dwelling, but the history of the people was hardly modified. The grandeur of the empire of Trebizond exists only in romance. Its government owed its permanence to its being nothing more than a continuation of a long-established order of civil polity, and to its making no attempt to effect any social revolution." The young man who grasped the sovereignty of this Asiatic fragment of the shattered Byzantine empire was Alexius, a grandson of Andronicus I., the last emperor at Constantinople of the family of Comnenos. This Alexius and his brother David, who had been raised in obscurity at Constantinople, escaped from the city before it was taken by the Crusaders, and fled to the coast of Colchis, "where their paternal aunt, Thamar, possessed wealth and influence. Assisted by her power, and by the memory of their tyrannical grandfather, who had been popular in the east of Asia Minor, they were enabled to collect an army of Iberian mercenaries. At the head of this force Alexios entered Trebizond in the month of April 1204, about the time Constantinople fell into the hands of the Crusaders. He had been proclaimed emperor by his army on crossing the frontier. To mark that he was the legitimate representative of the imperial family of Komnenos, and to prevent his being confounded with the numerous descendants of females, or with the family of the emperor Alexius III. (Angelos), who had arrogated to themselves his name, he assumed the designation of Grand-Komnenos. Wherever he appeared, he was acknowledged as the lawful sovereign of the Roman empire." For a time Alexius of Trebizond, with the help of his brother David, extended his dominions in Asia Minor with rapidity and ease, and he was brought very soon into collision with the other Greek emperor, Theodore Lascaris, who had established himself at Nicæa. It seemed likely, at first, that Trebizond would become the dominant power; but the movement of events which favored that one of the rival empires was presently stayed, and then reversed, even though Alexius took aid from the Latin emperor at Constantinople. Not many years later, in fact, the empire of Trebizond evaded extinction at the hands of the Turkish Sultan of Iconium, or Roum, only by paying tribute and acknowledging vassalage to that sovereign. For sixty years the so-called empire continued in a tributary relationship to the Seljuk sultans and to the grand khan of the Mongols who overthrew them in 1244. But, if not a very substantial empire during that period, it seems to have formed an exceedingly prosperous and wealthy commercial power, controlling not only a considerable coast territory on its own side of the Euxine, but also Cherson, Gothia, and all the Byzantine possessions in the Tauric Chersonesos; and "so close was the alliance of interest that these districts remained dependent on the government of Trebizond until the period of its fall." On the decline of the Mongol power, the empire of Trebizond regained its independence in 1280, and maintained it for nearly a century, when it was once more compelled to pay tribute to the later Mongol conqueror, Timur. At the end of the 14th century the little "empire" was reduced to a strip of coast, barely forty miles wide, extending from Batoun to Kerasunt, and the separated city of Oinaion, with some territory adjoining it. But, within this small compass, "few countries in Europe enjoyed as much internal tranquility, or so great security for private property." The commerce of Trebizond had continued to flourish, notwithstanding frequent quarrels and hostilities with the Genoese, who were the chief managers of its trade with the west. But the decay of the empire, politically, commercially, and morally, was rapid in its later years. First becoming tributary to the Ottoman conqueror of Constantinople, it finally shared the fate of the Byzantine capital. The city of Trebizond was surrendered to Mohammed II. in 1461. Its last emperor, David, was permitted to live for a time, with his family, in the European dominions of the Turk; but after a few years, on some suspicion of a plot, he was put to death with his seven sons, and their bodies were cast unburied to the dogs. The wife and mother

of the dead — the fallen empress Helena — guarded them and dug a grave for them with her own hands. The Christian population of Trebizond was expelled from the city and mostly enslaved. Its place was taken by a Moslem colony. — G. Finlay, *Hist. of the Empire of Trebizond* (*History of Greece and of the Empire of Trebizond*).

TRÈVES: Origin.— Trèves was originally the chief town of the Treviri, from whom it derived its name. When the Romans established a colony there they called it Augusta Trevirorum. In time, the Augusta was dropped and Trevirorum became Trèves, or Trier. See Treviri.

Under the Romans.—"The town of the Treveri, named Augusta probably from the first emperor, soon gained the first place in the Belgic province; if, still, in the time of Tiberius, Durocortorum of the Remi (Rheims) is named the most populous place of the province and the seat of the governors, an author from the time of Claudius already assigns the primacy there to the chief place of the Treveri. But Treves became the capital of Gaul — we may even say of the West — only through the remodelling of the imperial administration under Diocletian. After Gaul, Britain and Spain were placed under one supreme administration, the latter had its seat in Treves; and thenceforth Treves was also, when the emperors stayed in Gaul, their regular residence, and, as a Greek of the fifth century says, the greatest city beyond the Alps."—T. Mommsen, *Hist. of Rome, bk.* 8, *ch.* 3.

TRINITY HOUSE.—"Perhaps there is throughout Britain no more interesting example of the innate power and varied developments of the old gild principle, certainly no more illustrious survival of it to modern times, than the Trinity House. It stands out now as an institution of high national importance, whose history is entwined with the early progress of the British navy and the welfare and increase of our sea craft and seamanship; in an age when the tendency is to assume state control over all matters of national interest the Trinity House, a voluntary corporation, still fulfils the public functions to which its faithful labours, through a long course of years, have established its right and title. Although its earliest records appear to be lost or burned, there seems to be no doubt that Henry VIII's charter of 1514 was granted to a brotherhood already existing. . . . In the charter itself we read that the shipmen or mariners of England 'may anew erect' a gild, and lands and tenements in Deptford Strond, already in possession, are referred to. Similar bodies were formed in other places; in the fourteenth century there was a shipmen's gild at Lynn and another at Hull; in the fifteenth century the shipmen were one of the crafts of York. Mr. Barrett mentions that they also had houses at Newcastle and Dover. The Hull gild (which also happens to have been dedicated to the Trinity) flourished for seventy-four years before receiving its first royal grant. The objects to which it was devoted were akin to those of the Deptford House, and Henry VIII incorporated it in 1547, just about the time when most gilds, not of crafts, were destroyed. . . . The charitable side of the Trinity House functions has always been considerable; in 1815 they possessed no less than 144 almshouses, besides giving 7,012 pensions; but of late years their funds applicable to such purposes have been curtailed. . . . It is significant that in Edward VI's reign the name and style of Gild was abandoned by the brethren for the title of 'the Corporation of the Trinity House of Deptford Strond.' Gilds now had come into disrepute. The functions of the Trinity House have long been recognised of such value to the public service that their honourable origin, so consonant with other English institutions is apt to be forgotten. . . . To cherish the 'science and art of mariners,' and to provide a supply of pilots, especially for the Thames up to London, were their prime duties. The Admiralty and Navy boards were established as administrative bodies in 1520, and the ship-building yard at Deptford, with the storehouses there, 'was placed under the direct control of the gild.' The Sea Marks Act of 1566, which throws considerable light on the position of the company at that time, endued them with the power of preserving old and setting up new sea marks or beacons round the coasts, among which trees came under their purview. How far their jurisdiction extended is not stated; it would be interesting to know whether their progress round the whole shores of Britain were gradual or not. It is, perhaps, for its work in connexion with light-houses, light-ships, buoys, and beacons, that the Trinity House is best known to the general public. . . . It was only in 1836 that parliament 'empowered the corporation to purchase of the crown, or from private proprietors, all lights then in existence,' which are therefore at present under their efficient central control. . . . The principal matters in their sphere of action—the important provision of pilots, the encouragement and supply of seamen, ballastage and ballast, lights and buoys, the suppression of piracy and privateers, tonnage measurement, the victualling of the navy, their intimate connexion with the gradual growth and armament of the navy, the curious right to appoint certain consuls abroad—all these receive illustration at first hand from the author's careful researches among state papers and the muniments of the corporation."—Lucy T. Smith, *Review of "The Trinity House of Deptford Strond"; by C. R. B. Barrett* (*English Historical Rev., April*, 1894).

TRINOBANTES, The.—The Trinobantes were the first of the tribes of Britain to submit to Cæsar. They inhabited the part of the country now embraced in the county of Essex and part of Middlesex. Their chief town, or stronghold ("oppidum") was Camulodunum, where the Romans afterwards founded a colony which became the modern city of Colchester. Cunobelin, the Cymbeline of Shakespeare, was a king of the Trinobantes who acquired extensive power. One of the sons of Cunobelin, Caractacus, became the most obstinate enemy of the Romans when they seriously began the conquest of Britain, in the reign of Claudius.—E. L. Cutts, *Colchester, ch.* 2–3.

Also in: C. Merivale, *Hist. of the Romans, ch.* 51.—See, also, Britain: Celtic Tribes.

TRIOBOLON.—Three oboli,—the daily compensation paid in Athens to citizens who served as judges in the great popular courts; afterwards paid, likewise, to those who attended the assemblies of the people.—A. Boeckh, *Public Economy of Athens, bk.* 2, *ch.* 15.

TRIPLE ALLIANCE, The.—There have been a number of Triple Alliances formed in European history; see, for example, Netherlands (Holland): A. D. 1668, and Spain: A. D. 1713–1725; but the one in recent times to which allusion is often made is that in which Germany, Austria-Hungary, and Italy, are the three parties. It was formed by treaty in February, 1882, and renewed in 1887. Its purpose is mutual defense, especially, no doubt, against the apprehended combination of Russia with France.

TRISAGION, The. See CONSTANTINOPLE: A. D. 511–512.

TRI-SKELION.—GAMMADION.—FYLFOT-CROSS.—SVASTIKA.—"One of the most remarkable instances of the migration of a symbol is that afforded by the 'tri-skelion,' or, as we more familiarly know it, 'the three legs of Man.' It first appears on the coins of Lycia, circa B. C. 480; and then on those of Sicily, where it was adopted by Agathocles, B. C. 317–307, but not as a symbol of the morning, midday, and afternoon sun, but of the land of Trinacria, i. e., 'Three Capes,' the ancient name of Sicily; and finally on the coins of the Isle of Man, on which it seems to refer rather to the position of that island between England, Scotland, and Ireland, than to its triangular shape. The tri-skelion of Lycia is made up of three cocks' heads. . . . But on the coins of Sicily and of the Isle of Man the tri-skelion consists of three human legs of an identical pattern, excepting that those of the latter island are spurred. This form of tri-skelion is borne on the arms of several old English families, and it was in all probability first introduced into this country [England] by some Crusader returning from the East by way of Sicily. . . . The tri-skelion is but a modification of the 'gammadion' or 'fylfot-cross,' the 'svastika' of the Hindus. The latter was long ago suspected by Edward Thomas to be a sun-symbol; but this was not positively proved until Mr. Percy Gardner found a coin of the ancient city of Mesembria in Thrace stamped with a gammadion bearing within its open centre an image of the sun—Mesembria meaning the city of 'Mid-day,' and this name being figured on some of its coins by the decisive legend *ME*Σ卐. . . . The gammadion has travelled further afield than any other symbol of antiquity. . . . Count Goblet d'Alviella traces it back at last to the Troad as the cradle of its birth, some time anterior to the 13th century B. C."—*The Athenæum, Aug.* 13, 1892 (*Reviewing Comte Goblet d'Alviella's "La Migration des Symboles"*).

TRITTYES. See PHYLÆ.

TRIUMPH AND OVATION, The Roman.—"The highest reward of the commander was the triumphal entrance. At first it was awarded by senate and people to real merit in the field, and its arrangement was simple and dignified; but soon it became an opportunity of displaying the results of insatiable Roman rapacity and love of conquest. Only the dictators, consuls, prætors, and, in late republican times, occasionally legates, were permitted by the senate to enter Rome in triumph, the permission to the legate being granted only in case he had commanded independently ('suis auspiciis'), and conducted the army to Rome from a victorious campaign 'in sua provincia.' As in later times it was impossible to conduct the whole army from distant provinces to Rome, the last-mentioned condition was dispensed with, the claim of the commander to a triumph being acknowledged in case in one of the battles gained by him 5,000 enemies had been killed. The senate granted the expenses necessary for the procession after the quæstor urbanus had examined and confirmed the commander's claim. Streets and squares through which the procession had to pass were festively adorned. The temples were opened, and incense burnt on the altars. Improvised stands were erected in the street, filled with festive crowds shouting 'Io triumphe!' The commander, in the meantime, collected his troops near the temples of Bellona and Apollo, outside the gates of Rome. . . . The victor was met at the 'porta triumphalis' by the senate, the city magistrates, and numerous citizens, who took the lead of the procession, while lictors opened a way through the crowd. After the city dignitaries followed tibicines, after them the booty. . . . Fettered kings, princes, and nobles followed, doomed to detention in the Mamertine prison. Next came sacrificial oxen with gilt horns, accompanied by priests; and, finally, preceded by singers, musicians, and jesters, the triumphal chariot drawn by four horses. Clad in a toga picta and the tunica palmata, temporarily taken from the statue of the Capitoline Jupiter, the triumphator stood in his chariot holding the eagle-crowned ivory sceptre in his hand, while a servus publicus standing behind him held the corona triumphalis over his head. The army brought up the rear of the procession, which moved from the Campus Martius through the circus of Flaminius to the Porta Carmentalis, and thence, by way of the Velabrum and the Circus Maximus, the Via Sacra and the Forum, to the Capitol. Here the triumphator deposited his golden crown in the lap of the Capitoline Jupiter, and sacrificed the usual suovetaurilia. . . . The ovatio was granted for less important conquests, or to a general for victories not won 'suis auspiciis.' The victor, adorned with the toga prætexta and the myrtle crown, originally used to walk; in later times he rode on horseback."—E. Guhl and W. Koner, *Life of the Greeks and Romans, sect.* 109.—See, also, VIA SACRA.

TROJA.—TROY.—TROAD.—ILIUM.—"In the whole long extent of this Western coast [of Asia Minor] no region occupies a fairer situation than the northern projection, the peninsula jutting out between Archipelago, Hellespont, and Propontis, of which the mountain-range of Ida, abounding in springs, forms the centre. Its woody heights were the seat of the Phrygian Mother of the Gods; in its depths it concealed treasures of ore, which the dæmons of mining, the Dactyli of Ida, were here first said to have been taught by Cybele to win and employ. A hardy race of men dwelt on the mountains so rich in iron, divided into several tribes, the Cebrenes, the Gergithians, and above all the beauteous Dardani, among whom the story went, how their ancestor, Dardanus, had, under the protec-

tion of the Pelasgian Zeus, founded the city of Dardania. Some of these Dardani descended from the highlands into the tracts by the coast, which has no harbours, but an island lying in front of it called Tenedos. Here Phœnicians had settled and established purple-fisheries in the sea of Sigeum; at a later period Hellenic tribes arrived from Crete and introduced the worship of Apollo. In the secure waters between Tenedos and the mainland took place that contact which drew the Idæan peninsula into the intercourse subsisting between the coasts of the Archipelago. . . . In the midst of this intercourse on the coast arose, out of the tribe of the Dardani, which had deserted the hills, the branch of the Trojans. . . . Thus, in the midst of the full life of the nations of Asia Minor, on the soil of a peninsula (itself related to either side) on which Phrygians and Pelasgians, Assyrians, Phœnicians, and Hellenic mariners met, grows up the empire of the Dardanides. The springs of the Ida range collect into rivers, of which two flow to the Propontis, and one, the Scamander, into the Ægean. The latter first flows through his bed high in the mountains, through which he then breaks in a narrow rocky gorge, and quitting the latter enters the flat plain of his water-shed, surrounded on three sides by gentle declivities, and open on the West to the sea. . . . In the innermost corner of this plain projects a rocky height with precipitous sides, as if it would bar the passage of the river breaking forth from the ravine. Skirted in a wide curve by Scamander on the East, it sinks to the West in gentle declivities, where numerous veins of water spring from the earth; these unite into two rivulets, distinguished by the abundance and temperature of their water, which remain the same at all seasons of the year. This pair of rivulets is the immutable mark of nature, by which the height towering above is recognized as the citadel of Ilium. They are the same rivulets to which of old the Trojan women descended from the Scæan gate to fetch water or to wash linen, and to this day the same ancient walls close around the flowing water and render it more easily available. The source of these rivulets was the seat of power. On the gentler declivity lay Troja; over which towered the steep citadel of Pergamus, the view from whose turrets commanded the entire plain, . . . and beyond the plain the broad sea itself. . . . No royal seat of the ancient world could boast a grander site than this Trojan citadel."—E. Curtius, *Hist. of Greece, bk.* 1, *ch.* 3.—The site contemplated by Dr. Curtius in the description quoted above is some five miles higher up the valley of the Scamander than Hissarlik, where Dr. Schliemann's excavations are believed by many scholars to have now established the location of ancient Troy.—H. Schliemann, *Ilios: the City and Country of the Trojans.*—"Dr. Schliemann described in his 'Troja' and 'Ilios' seven successive layers of city ruins found in his excavations at Hissarlik. This number was increased in 1890 to nine by the discovery of two layers intervening between the highest (or Roman) layer, formerly called the seventh, and the sixth, or so-called Lydian layer. These two layers were, from the character of the finds, attributed to the early and the later Greek period. Dr. Schliemann was baffled by the fact that he could discover no acropolis for the sixth, seventh, or eighth layers. Dr. Dörpfeld, who in May [1893] resumed the excavations at the expense of Dr. Schliemann's widow, makes in the Mittheilungen of the German Archæological Society (xviii, 2), which appeared November 7, a significant report clearly establishing the fact that the Romans, in building the great temple of Ilian Athene, cut down the highest part of the acropolis, and thus destroyed all traces of the acropolis belonging to those layers. The excavations of 1890 had brought to light two magnificent buildings in the sixth layer, besides 'Lydian' jars, much pottery, and one entire vase of the Mykenæan or Homeric period. The evidence favored the identification of this layer with the Homeric Troy or the period of Mykenæ and Tiryns. On the other hand, the fact that only two buildings and no city wall had been discovered for this layer seemed to indicate that the Troy of Priam must be referred to a lower level, namely, the second, where a magnificent wall of prehistoric style had been discovered, although its architecture and the character of the finds suggested a more primitive culture than that painted in Homeric song. The sixth layer has now in large part been exposed by Dr. Dörpfeld and reveals the most imposing wall of pre-Roman times. The remains of seven vast buildings have been brought to light which have in part the ground plan of the ancient Greek temples and of the halls of Tiryns and Mykenæ, though surpassing those in proportions and in the carefulness of their architecture. The remains of one admirable building contained a hall 37 feet by 30. . . . Further, Dr. Dörpfeld uncovered the fortifications of this city in many places, and found them some sixteen feet in thickness with a still greater height. On the outside the wall has a uniform slope. A strong-tower fifty-eight feet in diameter contains an inner staircase. In strength, proportions, and careful architecture this tower will compare favorably with any tower of Greek antiquity. The neat work of the corners and the nice dressing of the stones might refer it to a period later than Homer, to the historical Greek period, did we not know that in historical times Troy was too insignificant to need the erection of such walls. Moreover, the tower, built over in Greek times, and partly damaged by the addition of an outer stair, was finally in Roman times buried under massive foundations. The correspondences in stone-work of the wall and the houses place the tower and the buildings evidently in the same layer. In the houses were found both local pottery and also pottery of the Mykenæan style."—*The Nation, Nov.* 30, 1893.—"The latest news from the explorations at Hissarlik (Levant Herald July 7) comes to us from the owner of the site, Mr. Frank Calvert, United States consul, Dardanelles. It was readily seen that the second, or burned city which Dr. Schliemann enthusiastically assumed to be the city of Priam, instead of solving the question of the 'Iliad,' offered new problems to the archæologist. The precious objects and the works of art there found were evidently ruder and more ancient by some centuries than those of Mycenæ, and therefore decidedly earlier than Homeric Troy. In the sixth city, however, pottery of a Mycenæan type was discovered, and this led Dr. Dörpfield, assisted by Mrs. Schliemann, and later by the German Government, to extend excavations on this level, with results that are now proving fruitful, and

that may possibly be conclusive. Curiously enough, Dr. Schliemann's excavations obscured rather than aided this particular investigation. The area of the sixth city was twice as great as the space covered by the successive acropolises of the other five; and, in consequence, their debris was dumped on the very spot which Dr. Dörpfield has just been clearing. The massive walls he has uncovered, from five to six metres broad, the lofty towers, and the street which has been traced, may provisionally be assumed to belong to the Homeric Troy."—*The Nation, August* 9, 1894.

TROUBADOURS.—TROUVÈRES.—JOGLARS.—JONGLEURS.—"The poets of the South of France during the Middle Age called themselves 'Trobadors,' that is to say, 'inventers' or 'finders'; and they adapted the 'langue d'oc,' also called the Romansh of the South, or the Provençal, to the expression of poetical sentiments. It is probable that poets of this description existed as early as the formation of the idiom in which they wrote. At any rate, we know that toward the year 1000 they already enjoyed considerable distinction, although there is scarcely anything now left us from the earliest period of their existence. . . . In regard to the time within which the poetry of the Troubadours was in vogue, M. Fauriel assumes only two periods. But it may perhaps be more conveniently divided into three, as follows: The first commences with its origin, as a popular poetry, and extends to the time when it became an art and a profession, the poetry of the nobles and the courts, that is to say, from about 1090 to 1140. The second is the period of its culmination, which extends from the year 1140 to 1250. The third is the period of its decadence, from 1250 to 1290."—G. J. Adler, *Introd. to Fauriel's "History of Provençal Poetry."*—"Sufficient has been said . . . to show the superiority of lyrical over epic poetry in Provence. This inequality of the two branches implied a commensurate difference of praise and social esteem awarded to those who excelled in either of them, and it is perhaps from this point of view that the two great divisions of poets in the 'langue d'oc,' respectively described as 'joglars' and 'trobadors,' or, in the French and generally adopted form of the word, 'troubadours,' may be most distinctly recognised. . . . It seems sufficiently established that the verb 'trobar' and its derivative noun first and foremost apply to lyrical poetry. To speak therefore of the Troubadour as the singer of songs, of cansos and sirventeses and albas and retroensas is a correct and tolerably comprehensive definition."—F. Hueffer, *The Troubadours, ch.* 6.—"In the twelfth century, the Romance-Wallon [or the 'langue d'oil' of northern France] became a literary language, subsequent, by at least a hundred years, to the Romance-provençal. . . . The reciters of tales, and the poets, giving the name of Troubadour a French termination, called themselves Trouvères. With the exception of the difference of language, it may be thought that the Troubadour and the Trouvère, whose merit was pretty nearly equal; who were equally ignorant or well-informed; who both of them spent their lives at courts, at which they composed their poems, and where they mingled with knights and ladies; and who were both accompanied by their jongleurs and minstrels, should have preserved the same resemblance in their productions. Nothing, however, can be more dissimilar than their poems. All that remains of the poetry of the Troubadours is of a lyrical character, while that of the Trouvères is decidedly epic. . . . The Trouvères have left us many romances of chivalry, and fabliaux."—J. C. L. S. de Sismondi, *Literature of the South of Europe, ch.* 7 (*v.* 1).—"We know nothing of the rise or origin of the two classes of Trouveurs and Jongleurs. The former (which it is needless to say is the same word as Troubadour, and Trobador, and Trovatore) is the term for the composing class, the latter for the performing one. But the separation was not sharp or absolute."—G. Saintsbury, *Short Hist. of French Literature, bk.* 1, *ch.* 1.

TRUCE OF GOD, The.—"This extraordinary institution is the most speaking witness, at once to the ferocity of the times [11th century], and also to the deep counter feeling which underlay men's minds. Clergy and laity alike felt that the state of things which they saw daily before their eyes was a standing sin against God and man, repugnant alike to natural humanity and to the precepts of the Christian religion. States were everywhere so subdivided, governments were everywhere so weak, that, in most parts of Europe, every man who had the needful force at his command simply did that which was right in his own eyes. . . . Every man claimed the right of private war against every other man who was not bound to him by some special tie as his lord or his vassal. And the distinction between private war and mere robbery and murder was not always very sharply drawn. . . . A movement on behalf of peace and good will towards men could not fail in those days to assume an ecclesiastical form. As of old the Amphiktyonic Council, the great religious synod of Greece, strove to put some bounds to the horrors of war as waged between Greek and Greek, so now, in the same spirit, a series of Christian synods strove, by means of ecclesiastical decrees and ecclesiastical censures, to put some bounds to the horrors of war as waged between Christian and Christian. . . . The movement began in Aquitaine [A. D. 1034], and the vague and rhetorical language of our authority would seem to imply that all war, at any rate all private war, was forbidden under pain of ecclesiastical censures. It must not be forgotten that, in that age, it must have been exceedingly difficult to draw the distinction between public and private

war. . . . But the doctrine, hard as it might be to carry out in practice, was rapturously received at its first announcement. As the first preaching of the Crusade was met with one universal cry of 'God wills it,' so the Bishops, Abbots, and other preachers of the Truce were met with a like universal cry of Peace, Peace, Peace. Men bound themselves to God and to one another to abstain from all wrong and violence, and they engaged solemnly to renew the obligation every five years. From Aquitaine the movement spread through Burgundy Royal and Ducal. But it seems to have been gradually found that the establishment of perfect peace on earth was hopeless. After seven years from the first preaching of peace, we find the requirements of its apostles greatly relaxed. It was found vain to forbid all war, even all private war. All that was now attempted was to forbid violence of every kind from the evening of Wednesday till the morning of Monday. It was in this shape that the Truce was first preached in northern and eastern Gaul. The days of Christ's supper, of His passion, of His rest in the grave and His resurrection, were all to be kept free from strife and bloodshed."—E. A. Freeman, *Norman Conquest, ch.* 8, *sect.* 2 (*v.* 2).

TUATH.—"Among the people of Gaelic race [in Ireland and Scotland] the original social unit appears to have been the 'Tuath,' a name originally applied to the tribe, but which came to signify also the territory occupied by the tribe community. . . . Several of these Tuaths were grouped together to form a still larger tribe, termed a Mortuath or great tribe, over whom one of the kings presided as Ri Mortuath. . . . Then several of these Mortuath formed a province, called in Irish 'Cuicidh,' or a fifth. . . . Over each province was the Ri Cuicidh, or provincial king, and then over the whole was the Ardri, or sovereign of all Ireland. The succession to these several grades of Ri, or king, was the same as that of the Ri Tuath, and was regulated by the law of Tanistry, that is, hereditary in the family but elective in the individual, the senior of the family being usually preferred."—W. F. Skene, *Celtic Scotland, v.* 3, *pp.* 136–150.

TUATHA-DE-DANAAN.—One of the races named in Irish legend as original settlers of Ireland, represented to have come from Greece and to have been extraordinarily proficient in the arts of magic. They were conquered, after two centuries, as the legend runs, by the Milesians, or Scots.—T. Wright, *Hist. of Ireland, bk.* 1, *ch.* 2 (*v.* 1).—See IRELAND: THE PRIMITIVE INHABITANTS.

TUILERIES, The.—The palace of the Tuileries is said to have taken its name from the tile-making which had been carried on formerly in the vicinity of the ground on which it was built. "The history of it begins in the year 1564, when Catherine de Medicis conceived the idea of having a palace to herself near the Louvre, yet independent, in which she might be near enough to her son Charles IX. to have influence over him. . . . The palace was never very long or very closely connected with the history of the monarchy. It is not at all comparable to Windsor in that respect. Henry IV. liked it, Louis XIV. preferred Versailles, Louis XV. lived at the Tuileries in his minority. The chosen association of the palace with the sovereigns of France is very recent. Louis XVI. lived in it, and so did Charles X. and Louis-Philippe. The two Napoleons were fond of it. . . . The last inhabitant was the Empress Eugénie, as Regent. . . . The parliamentary history of the Tuileries is important, as it has been not only a palace but a parliament house. . . . The destruction of the Tuileries by the Communards [1871] was a lamentable event from the point of view of the historian and the archaeologist, but artistically the loss is not great."—P. G. Hamerton, *Paris in Old and Present Times, ch.* 5.
